Dan:

Actually, this "Dolt" is just tired of the standard ancient amateur
with his outdated equip taking up bandspace and passing gas...

We need new blood just to bring back some excitement and some future
progress to the amateur hobby... and we need to get rid of those who
oppose and stand in the way of progress... yesterday would not be too
soon for these changes...

John

Dan:

Well, the 60 to 90 crowd have the bands now, they think they can live
forever and protect their status--we will see--won't we?

In the meantime, when new "would be hams" cite the code and leave, I
am recommending they hold off and see what is going to happen in the
future, I point out if the code is dropped they would change their
minds...

I'm sorry.....knowing full well she has me deep sixed, I just have to comment.....

What the heck is SCTV? Is that a TV show? Or maybe she means Slow Scan TV?? SSTV.......Hmmmmm.

Then...."APRS if that can be considered digital".

Amazing.....and she has a license?

Amazing.

Speaking of AC plugs Lennie the loser....how about doing us all a favor and show your "eeee" competence at a level we all know you are at? Stick your index finger and the little finger into the AC plug and write us a technical report on the results.

Putz.

Yes she did....then proceeded to show us how ignorant she was/is.

Proof positive of the dumbing down of Amateur Radio....IMHO.

Dan:

Now I ask you, "What boob would use SSTV?"

A webcam on a computer, compressing and digitizing the video and then converting to an audio signal and finally delivering it to a transceiver, to be picked up and decoded at the other end and fed to a soundcard/computer monitor produces a MUCH clearer sharper and more fps... SSTV is for dinosaurs!!!

Wake up, it is already 2005!

John

Yup. "Second City TV" 70's-80's with John Candy and others. Hilarious stuff.
My favorite was the dimwit McKenzie brothers from "The Great White North"
segment. Basically the Canadian version of rednecks, but more so. Eh, hoser?

No it is matter of law, by what power does the FCC have to continue
this Morse Code Welfare program. Nothing in the constitution, and
nothing anymore in the the treaty. and no one has shown how any
provision of the sonstitution allows the FCC to without access to hf
based on the skill in the mode. The FCC has ruled in the past that it
does not have a case to make.

But ultimately one thing many of them do lack is desire, desire to
learn Morse is a requirement it is indeed one of the most vital
requirement to learn the mode.

Why don't they have this desire? I don't know. but maybe you should
look to seeling the mode better, if you think it is important

Well I did get to ride a bus (except when roads were really bad) but had that same "quick run" decision to make in the middle of the (cold) winter nights.

AFAIK, Canada is the _only_ country with a higher power limit than the US!
They can use 2.25 kW (with an Advanced licence), and have no subband
limitations. Mind you, Canadians are very polite.

While human nature is the same, the higher number of hams means you will see more of it.

160 meters has the self limiting factor of the size of workable antennas. Many hams simply can manage to get anything reasonable in the air.

And the European system of self imposed band plans doesn't work as well as you seem to think. Just listen to them during one of their European contests. They are supposed to follow the band plans but don't since the rules generally only suggest they follow the band plans rather than requiring them to do so. They are every bit as bad as the US hams.

Hi,

I used to have novice call WD6BDK back in the mid to late 70s (76-79 I think?).

I'm hoping to upgrade from a tech to an extra on Saturday, and I was just told I could use my old expired novice call to skip element 1 (the 5wpm test). I'd rather not stress over element 1 (I can pass, but...).

If you or someone you know has an old callbook and could look me up and scan or fax me a copy of the page, I would be eternally in your debt.

Much thanks,

Paul

I'll bet you have "personal friends" who are not of your race
or your religion, too! :-)

>Our satellite guru was a no code Tech until he
>took time out to upgrade.

He built a satellite and put it into orbit through morsemanship?

> Many of our no code Techs are johnny on the spot
>in supporting public service events.

Are your "coders" the same sort of "johnny on the spot?" :-)

>Several becames ham solely because
>they were interested in this aspect of ham radio. None of them are whining
>about how tough it is to learn the code.

Do they dare comment with Mama Dee "on the spot" to catch them? :-)

> Many of our public service people
>have no interest in upgrading and that's no problem. We do not push them to
>do so as they are getting what they want out of ham radio.

Good for you. That way you UPGRADED coders (the Elite) get to
stay home and beep while the "lower classes" go out and do the
real "volunteer work."

>Those who wish to upgrade get our full support and help.

Right. Saves you Elite coders from being away from your beeping.

>> Probably because Dan and Dave chimed in with negative responses as
>> well.
>
>No they express disdain only for the whiners.

BWAHAHAHAHAHAHAHAHAHAHHA!!!!!!!!!!!!!!!!!!!!!!!!!

Dipshit Dan, the southern-fried Einstein, and der Kommandant?!?!

BWAHAHAHAHAHAHAHAHAHAHHA!!!!!!!!!!!!!!!!!!!!!!!!!

>> Probably because I have seen many Extras with such attitudes, many of
>> them right here on RRAP.
>
>Again it is only the whiners that get their hackles up not the no code Techs

A very poor imitation of Marie Antoinette. Don't lose your head
trying to do better...

>> Probably because Robber's Son keeps asking who chased away the Techs
>> when the answer is so plainly visible.
>
>It is not at all "so plainly visible".

It might be "plainer" if it were in glowing neon on everyone's
screens...but it is otherwise PLAINLY VISIBLE.

>All of us have reached out to those who wanted/needed help to upgrade.

BWAHAHAHAHAHAHAHAHAHAHHA!!!!!!!!!!!!!!!!!!!!!!!!!

Thanks a lot for the "cake," Marie...

> Unfortunately all of us have experienced
>those "know it all" individuals who think they know more than the
>experienced amateurs.

Really?!? Mama Dee worked HF comms a half century ago? Mama
Dee spend a career doing radio-electronics design? Dee have
radio-electronics hobby since 1947? Dee have commercial license
for 49 years? Dee have own expensive PLMRS base and mobile
station? How about that! Sunnuvagun!

Sweetie, if you TRIED to be more Elitist you couldn't have topped
that closer sentence! First class honors in noblesse oblige
(and probably droit de signeur too...). :-)

If you want to transmit images on HF at this time only fax and SSTV have a
small enough band width to be practical.

Oh, my, a numbers coincidence.

Gee whiz, in late summer of 1954, Army station ADA started moving
to its new site NW of Tokyo. Former airfield about one by two
miles in size. Running water and everything but the 600 KWe
generators (two always running, two spares) supplied the electric
power. Barracks, mess, etc., in a converted hangar at one corner
of the field. Surrounded by farmers.

Five years later I thought it might be neat to get a ham license
in addition to the Commercial First 'Phone of 1956. Got up to
8 or 9 WPM and wondered what the hell I was wasting all that time
for? Class D CB had arrived in 1958. I was living in the (then)
third-largest city in the USA with plenty of folks to talk to
out of my '53 Austin-Healey sports car.

I'd never "worked CW" (on-off keying radiotelegraphy) in the Big
Leagues of HF communications...and would never be required to do
that again. Why mess with then OLD requirements just to please a
bunch of olde-fahrt radiotelegraphers playing with their hobby
and very much controlling the ARRL?

I'm still living in a big urban area, now the second-largest city
in the USA, have done computer-modem communications for 21 years
(come December), the Internet has been public for 14 years, and
we've got personal cell phones on 1 GHz that fit in a pocket and
have text and image capabilities. Both my PC and my wife's each
have MORE computing power and memory storage than the largest
mainframes of a quarter century ago. The Internet reaches around
the world with NO fading/distortion/outages from the ionosphere.

All these AMATEUR radio whizzers say I "MUST" learn morse code
to pass that (Nobel laureate level?) TEST in order to "show

dedication and committment to the 'amateur community.'" :-)

<insert the sound of Bill the Cat making pbthththth sounds>

Gotta love these olde-fahrts longing for the "pioneer days of radio" (when Kode was King) that they will NEVER ever be a part of... :-)

LenAnderson@ieee.org

> Within 75 miles of the border, maybe. But not within 75
> miles of most US hams.

????????? I don't live within 75 miles of most US hams either, but I have evidence that thousands of them hear my signal. 2-way HF contacts between VE and W hams also are commonplace, so it seems that problems in the Canadian regulations would be very visible here.

> But they do have arbitrary bandwidth limits.

Yup, a single bandwidth applied to the whole band. Not sliced and diced and micromanaged into all manner of itty-bitty pockets, yet allowing one privileged mode free access to all those so-called protected segments. You can't really pretend with a straight face that this hodge-podge makes sense!

>> Since, as you point out, their bands are virtually the same
>> ones we use right next door, certainly we'd know about
>> any problems with their style of regulation.

> They have far fewer hams than the USA, spread out over a larger area.

You said that before, and I've disproven the "spread out over a larger area" myth. Canadian hams are quite geographically concentrated, regardless of the size of their wonderful contry. Most Canadians live in a 75-mile (give or take) corridor along the US border, and are further concentrated into a few metropolitan "clumps" along that strip.

> What works in the country (low-density-of-hams places)
> won't necessarily work in the city (high-density-of-hams places).

> Most of the rest of the developed world places far more
> restrictions on the ownership of firearms than the USA.
> And they have far less violent crime, too. Since that
> seems to work for them, would you propose the USA
> adopt such restrictions?

My proposal is to remove restrictions, not add them! You're the fella propounding that restrictions are a good deal.

I propose that along with freedom (from arbitrary restrictions) comes the responsibility to act responsibly, and I submit that generally US hams have demonstrated that sort of responsibility.

>> Morse (a "narrow" mode) is allowed on all MF/HF frequencies
>> except the 60M channels. Have you seen any problems caused by that?

> Nope - because Morse operators, in general, voluntarily stay
> out of the 'phone/image subbands.

Ah, yes, I see. The hams have VOLUNTARILY sorted out where to transmit. In other words, a regulation wasn't needed. What a concept!

> You mean it was formally submitted as a restructuring proposal
> in the past year or two?

It was formally submitted (3 times) in response to other related matters.

At 14 years old I didn't much give a rats ass about the fact that an Army radio station was moving to a different spot in Japan. (Come think of it, I still don't give a rats ass.) I was much more excited about getting electric lights in our farm buildings and home.

That is not only a ridiculous statement, it is preposterous and shows a total lack of knowledge of the state of data compaction.

However, it proves you are not aware of what is technically possible and therefore are in a poor position to advise or inform others and, the sorry state of amateurs technical savvy in general!

I was commenting on your character.

But if you want to make it about your ancestors, they got that name
somehow. Now you have it.

You explain how they got it honestly, and provide proof.

The idea that Ham radio is dying is pretty weird. I don't see any evidence for it. The closest thing to evidence is that fall-off we are going through right now. And that falloff is due mostly to the "honeydew hams" who got their license so that could tell the hubby or the missus to pick up bread or milk on the way home. Those folks haven't been active in years.

And as for the average age of hams? America is aging, aging, aging overall. BFD. Our club has a lot of brand new Hams who are older than me. They are enthusiastic, and having a heck of a good time.

I'm glad to have them on board.

> YOUR POINT IS?

How about this for a *counterpoint*? During Field day weekend, I heard an obviously very young lady answering my CQ. I was in the middle of a major run at the high power station, and it would have been easier to ignore her. I had to have her repeat the callsign and info several times - I think she was in the missing the front teeth stage. After about a minute we finally got the exchange completed I said "thank you honey", and she said "Thank YOU!". That part came through loud and clear.

SO THERE, bitchy negative type hams!

"Loser?!?" :-)

BWAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!

Do you want me to give a precis of what I've WON out of life so far or are you content to vent your enlarged spleen of anger on what you think I wrote before? I can do that but it only arouses more ANGER and assorted assinine abuse from the PCTA crowd here.

There is NO "hate" except for all the Coders angry and upset that no-coders don't give the Coders the "respect and honor" the Coders think they deserve. In AMATEURISM, that small segment of the entire radio world.

The U.S. amateur radio morse code TEST should go, Dannie. The Coders will go soon enough. The code TEST has outlived its usefulness long ago.

The Coslonaut started this thread with a pre-loaded emotional-content-wrapped "question." Coslonaut does that from time to time, desiring to be a Mover and Shaker in this newsgroup. He might mean well (sometimes) but he has bought into the morse myths and bravely trying to become an olde-fahrt hamme.

On your other posting -

>Speaking of AC plugs Lennie the loser....how about doing us all a favor and
>show your "eeee" competence at a level we all know you are at? Stick your
>index finger and the little finger into the AC plug and write us a technical
>report on the results.

It's IEEE, not "eeee," Double-Dipped Southern-Fried Dummshit Dannie.
Institute of Electrical and Electronic Engineers, a professional
association. Roughly a quarter million members worldwide.

LONG before I joined the IEEE in 1973 I knew better than to "stick
fingers into an AC socket." Nominal 115 VAC can be LETHAL, Dannie.

Follow the "30-30" rule: Anything above 30 Volts and/or above
30 mA source current can cause heart fibrilation and resulting
death...if the conducting path is through the upper chest area.

At present I can measure the voltage across an AC outlet. With
precision I would use my 4 1/2 digit DVM (made in France), secondly
with one of my 3 1/2 digit DVMs (made in China), thirdly with my
home-built expanded scale voltmeter that is part of a variable
autotransformer controlled 135 W AC source for measuring power
supply stability. For just presence or absence of AC voltage, a
cute little non-contacting capacitive-sensing light/clicker will
do (made in China, bought at Lowes)...or just plugging in a 115
V lamp. No problem. I would have listed my AC chart recorder but
I ran out of paper about 9 years ago and haven't had a need to use
it since. Got that in a trade for other things even longer ago.
It still works fine without chart paper but only for short periods
of about 20 minutes using 8 1/2 x 11 paper.

>Putz.

Now now, Dannie. You are UPSET and wanting to FIGHT with someone.

Did you lose a fight with that quadruplegic down at VFW hall again?

Don't try to "tell" me about radio communications, Dannie, you will
only make things worse, annoy me, and waste my time (and everyone
else's). You don't have the semantic/literary skills to outclass
me. [you never did] The best thing you are able to do in here is
to copy the antics of the Tennessee Talibanian and none of that is
any sort of "discussion." Tsk, tsk. I had hoped you were better
than that, but now you've dashed any optimistic hope with the use
of ethnic pejoratives that are not your native language.

Go work some DX on HF with CW. It will make you feel better. You
aren't even third-rate at computer-modem comms.

The FCC dumped micromanaging 160 on the ARRL, less work and flak for
the FCC.

> 73, de Hans, K0HB

w3rv

The illegal and unethical relationship between FCC & ARRL is
one point of several which will enable K1MAN to prevail over
the FCC.

> If that's true, I think it already would have happened.

Pactor is already in the HF bands, it's a royal pain in the tush and the FCC will probably bring it's use under control based on all the griping about it.

Considering the rapid pace of development work in the field of high-speed wireless comms I expect it'll become technically much easier as time goes on to get some form or another of wireless broadband hardware running in the HF ham bands. Which would immediately raise more hell on the bands than anything we've seen in the modern era. Which it hasn't and it won't because those modes are not allowed to happen under the current regs. So I disagree with your "unregulated equal opportunity mode playground" concept.

> The US is one of only a
> very few countries which has mandated "mode sub-bands".

No counter, we've been very pointedly marching to our own drummer since 1776 and I sure hope we never become international sheep.

We have a whole pile of sweeping "restructuring" schemes before the FCC and everybody is all atwitter over the minutia and their parochial hot buttons, etc. The usual. Lotta nonsense, I have yet to read one of 'em which if implemented wouldn't make conditions on the bands *worse* in some way or another than what we have now. The bands ain't broken, why are we so hell-bent on "fixing" something which ain't broke??

Bleh.

> 73, de Hans, K0HB

Wake up and smell the coffee. Ham radio is and has been for many
years, a dead and dying hobby, where today old white men form the
core of the hobby.

>in our farm buildings and home.

I can understand your "not giving" about others. :-)

Frankly, Scarlet, I don't give a damn for young teeners out in
the boonies suddenly getting ELECTRICITY in 1954! How about that?

Too bad you couldn't have tapped into the 300 KWe out of each of
the 16-cylinder marine diesels running generators at Kashiwa in
1954. Would have lit up your life some...

Of course the main room at Kashiwa transmitter building didn't
have but about 8 transmitters in 1954, there would be 43 Big
Ones in there by 1956 and completion of the move. Not to
mention wire antennas all over the airfield, including full
rhombics. 1 KW minimum, 40 KW maximum RF outputs. Not a single
one of them using on-off keying radiotelegraphy. Sunnuvagun!

When one stood at one end and looked down the row to 150 feet or
so in the distance and saw nothing but high power HF transmitters
side by side on each side, it was bound to have an impression.
Then out in the microwave building with four 24-channel microwave
radio relay terminals that were the main link with anyone that HAD
to be kept ON 24/7. [not to mention the old carrier bays]

Perhaps not as much as suddenly getting electricity where one
had nothing but wind-charged batteries but then that's us "city
boy sissies" I'm sure you'd apply. Life must have been
extraordinarily TOUGH way, way out on the farm. You have my

sympathies. Nothing else. Just sympathies. :-)

Mike:

Wake up, SSTV was big news in the 1960's, it is now 45 years later and they have invented the computer!

Any of the web technology of data encryption/compaction/jpeg/mpeg etc can be easily adapted to amateur radio though the sound card (if you have a pci sw receiver card you can do it through other ports and much more efficiently), think about it.

Why most amateurs are not experimenting with it only emphasizes their age and inability or unwillingness to stay current with technology. And, the fact that the sharpest technical people are NOT entering amateur radio these days...

But would U.S. phone ops VOLUNTARILY stay up the bands and out of the
segments historically inhabited by the CW and digital users if they
were not restrained from doing so?

Not in our lifetimes.

> discipline" to sort things out without FCC micromanaging it?

There have already been problems on 160 because some folks won't follow the voluntary bandplan. Already been a proposal to FCC that would impose subbands-by-mode on 160.

Only if there were enough of them to have such problems. The Canadian
amateur population (thanks, Leo) is less than 10% of the US amateur
population.

I'm saying that because something works in another country doesn't mean
it will work here. Perhaps we should adopt Canada's health care system
too? That would end the busloads of people going north on trips to buy
their medicines at reasonable prices.
>

The hams who use Morse, that is. Have you noticed that almost all
on-air-behavior-related FCC enforcement actions are for alleged
violations using *voice* modes?

> > You mean it was formally submitted as a restructuring proposal
> > in the past year or two?
>
> It was formally submitted (3 times) in response to other related > matters.

So it wasn't submitted as a restructuring proposal, but as comments to
other proposals.

Too bad. I'd like to see what the general reaction would be to such a proposal, even if I don't agree with it.

Ok then, show me the math that demonstrates you can transmit a one megabyte picture in seconds on the HF bands using only 300 baud. To get it down to seconds requires data compression/encryption techniques that can reduce the data by a 1000 fold.

CALL STEVE
(Debbie Harry/Blondie/Purple Haze)

Cold nuts this winter, baby,
Call Steve to keep them warm
Need a blowjob this winter, darling,
Steve'll go down wherever you are
Steve'll use all his charm,
He likes to drink his cum lukewarm

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blow job
You can call Steve any day or night
Call Steve

Steve covers dicks with kisses, baby,
Steve covers testicles with love,
Hairy, sweaty, or sal-ty, maybe
Steve can never get enough,
Faggots call Steve, he don't know why,
Breathless Steve never runs out of k-Y

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blowjob
You can call Steve any day or night
Call Steve
Steve sucks on anything,
When you're ready, Steve can swallow your jing
Call Steve

[Break]

Oooooh oooohh Niggerdicks are Steve's only love,
Oooooh oooohh Niggerdicks, Steve can't get enough,
Oooooh oooohh Steve, moi cherie, au revioir
Anytime, anyplace, anywhere, anyway....
Steve'll suck anytime, anyplace, anyday---ay

[Break]

Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve, call him any, anytime
Call Steve, Call Steve
Call Steve for blowjobs some other time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve for his sweet desire
Call Steve, Call Steve
Call Steve for his lovin' of your dick big-time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve any, anytime
Call Steve, uh-hummm,
Call Steve
(fade out)

Interesting discussion. Interseting implications here. In running the
GOTA station at Field Day, and in encouraging new folks to come up and
use the club station, I am often extolling the benefits of upgrading to
Technicians.

People who read into that that I am somehow prejudiced against the
Tech's have an active imagination.

Of course there are benefits to upgrading. Sounds like some people
don't want that to get out. Seems like now we're hearing that
encouragement to upgrade is chasing people away.

In addition, this has become an argument that those of us who work with
the Technicians and encourage them to increase their license level
somehow disdain those we encourage. Almost as if the tutors in hagh
school hate 11th graders because they help them pass their courses so
they can become 12th graders.

Good luck with that one guys!

Maybe we are just supposed to ignore the Technicians, because anything
we do appears to "chase them away".

Talk to 'em about Ham radio - chase 'em away

Don't talk to 'em - chase 'em away.

Encourage 'em - chase 'em away.

Uh-huh.......

Funny what happens when people try to defend a bogus argument.

We don't hate the Tech's

If they want to upgrade, we are there to help.

Sometimes expressing why they might want to learn something that they think they have no use for in order to get there is helpful.

And BTW, the reaction to simple questions tells more about the "reactee" than it does the person posing the question.

Obviously, images can be transmitted by digital modes as well as the
analog method of SSTV.

Is that a good way of transmitting the image? It can be. Seems I've
heard about a digital image transmission mode.

Does that make the Analog SSTV mode obsolete? No more obsolete than SSB
or FM. It is a fairly quick mode, and with a computer is now
inexpensive, and fun.

I'm looking forward to an education on the modes from someone with
technical savvy. Mr Smith?

And, to their credit, the Commission declined to act on that frivolous proposal stating that we could work it out among ourselves. Seems we've done just that, and the 160M band is working just fine, letting dynamic market forces determine usage patterns.

Sunuvagun!

> But most of us don't have antennas or amplifiers like yours, Hans.

There's nothing uncommon about my stations.

> It makes more sense than a free-for-all.

"Free-for-all" is an emotionally charged term, calculated to engender visions of a street brawl. Most of the worlds hams outside the US already enjoy the freedom to use the bands without government-mandated "segment by mode", and I notice no such brawls taking place. By and large, hams seem to be a cooperative and responsible population with a good record of self-regulation.

I thought the proposal authors stated that concept quite accurately:

"We believe the ideal band plan is one where good judgment on the operator's part supports use of any mode and any frequency available within their license class. Good judgment is centered on cooperative, flexible use of frequencies, with a specific goal of avoiding and/or resolving interference to others at a direct and low level, avoiding escalation and any need for outside enforcement. Guided by the use of good judgment, removal of artificial boundaries would encourage dynamic selection of frequency, affording an operator the best chance to minimize compatibility issues with other modes and activities. This would lead to greater band "loading" and improved utilization by allowing an operator to choose a clear spot on the dial across a greater frequency range.

"Intentional interference with communications is a violation of the regulations, independent of the mode in use, and whether automatic, semi automatic, or manually keyed. Sanctions would continue to be available against deliberate interference or problems involving technical signal purity, using volunteer "official observer" type programs. If a documented problem remains chronic or unresolved, the intervention of federal authority would reinforce volunteer OO in self-regulation efforts, as it does today.

"Automatic or semi automatic data operation not copied by the human ear becomes of particular concern under our proposal, since the activity would be unencumbered by subband. This group of users would have a specific challenge to maintain the good judgment pre-requisite by making certain their telemetry-polling systems recognize the presence of other modes and activities and avoiding interference to other communications. Chronically failing to do so would remain an actionable violation under existing rules against deliberate interference, since it could be shown such judgment had not been exercised.

"We contend that the goal of voluntary selection of operating frequencies for improved spectrum use is best achieved through real-time assessment of variables in propagation and radio traffic load. Efforts to improve spectrum use are

currently constrained because these variables cannot be accommodated with fulltime, rigidly defined sub-bands.

"Additionally, contemporary technology offers interference protection at the receiver to an extent not possible 60 years ago, when protection was implemented by regulatory mandate to divide "phone" and "code" activity. Technology and patterns of use now encourage the more effective coordination that we propose."

Only if the mode is as popular as Morse Code is on the HF/MF bands.

> I take it you'd be in favor of that? If not, why not?

See above!

Do you include "robot" modes?

> > So it wasn't submitted as a restructuring proposal, but as

Even though I disagree with almost all of it, I think it would be
better if it were sent to FCC as a formal proposal. Because it would
then get a lot more attention than it would as a comment.

But it's *your* proposal, not mine.

Interesting. In other words, if SSTV or PSK-xx (just a couple of examples ---
pick your own other candidate) became as popular as Morse, then that mode ought
to enjoy the same "full band" freedom that only Morse now enjoys. That seems to
be inconsistent with your previous "modes should be kept separate" stance.
Maybe you're starting to see it my way after all.

I respectfully submit that most US hams don't have antennas like yours,
Hans. Nor a similar location.

> > It makes more sense than a free-for-all.

Maybe to you.

> Most of the worlds hams outside the US already enjoy the

Doesn't mean they don't happen, just that you don't hear them.

Is the USA like the rest of the world in terms of culture? Number of
hams? Enforcement of regulations?

> By and large, hams seem to be a cooperative
> and responsible population with a good record of self-regulation.

As a group, yes. But in certain specific instances (like 75 meters)
things are not so rosy.

> I thought the proposal authors stated that concept quite accurately:

Sounds nice. Now tell it to those running robot pactor stations. Or
K1MAN..

> Guided by the use of good judgment, removal of artificial boundaries would

What amounts to "a clear spot on the dial" varies with mode. All I need
for CW is a couple of hundred Hz. The folks running AM or hi-fi SSB
need 10 to 20 times that much, and their receivers are (of necessity)
much less selective.

> "Intentional interference with communications is a violation of the regulations,

Yeah, sure. How is the recipient of interference supposed to identify
the source?
>
> "Automatic or semi automatic data operation not copied by the human ear becomes

That alone makes it a bad idea.

> This group of users would have a specific challenge to
> maintain the good judgment pre-requisite by making certain their
> telemetry-polling systems recognize the presence of other modes and activities

They can't even make that happen today. So we reward them by giving
them the whole band to play in?

> Chronically failing to do so
> would remain an actionable violation under existing rules against deliberate
> interference, since it could be shown such judgment had not been exercised.

If they can even be identified!

> currently constrained because these variables cannot be accommodated with
> fulltime, rigidly defined sub-bands.

Sure they can, the authors of the proposal just don't want to.

--

Let's get down to what this proposal is really all about:

1) More room for the 'phone folks/less for the CW & data folks

2) Less constraint on the robot-data-mode folks

It's all gussied up with fancy, emotional verbiage like "real-time
assessment of variables in propagation and radio traffic load" but the
above two things are what it's really all about.

What it also amounts to is *rewarding* the use of
spectrally-inefficient modes. IOW, if the 'phone band is crowded, try
CW, PSK31 or some other mode that doesn't need so much spectrum!

>
> "Additionally, contemporary technology offers interference protection at the
> receiver to an extent not possible 60 years ago, when protection was implemented
> by regulatory mandate to divide "phone" and "code" activity. Technology and
> patterns of use now encourage the more effective coordination that we propose."

So we all need new rigs with all the bells and whistles.

The separation of modes is a lot older than 60 years ago, too. It
derives from a whole bunch of reasons.

A very experienced Amateur on this forum has suggested that the amount of bandwidth available to a particular mode might be linked to how well users of that mode behave on the air. He may well have hit on a new regulatory tool which would reward good behaviour with greater spectrum availability.

With this in mind, please rank the following alphabetical list of popular modes in order of their good behaviour (least citations/letters from K4ZDH, least times you've been deliberately interfered with by the mode, etc.)

AM
AMTOR
AX.25
CW
PACTOR
PSK-xx
RTTY (5-bit baudot)
RTTY (7-bit ASCII)
SSB
SSTV

Unless I've missed something, that statement does not accurately reflect the thrust of the proposal.

Yes, it would grant more spectrum to phone, equal to that now enjoyed by CW.
No, it does not diminish the spectrum available to CW.
No, it does not diminish the spectrum available to data -- in fact, it increases it to equal that now enjoyed by CW.

> 2) Less constraint on the robot-data-mode folks

Yes, and less constraint to all other modes also.

Sort of in the spirit of the upcoming holiday, it has a ring of freedom about it.

81. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-01 16:56:49 UTC
From: N2EY@AOL.COM
Message-ID: <1120237009.105397.87210@g49g2000cwa.googlegroups.com>
Source record: 111437

These are the numbers of current, unexpired amateur licenses held
by individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of June 30, 2005:

Novice - 28,151 (decrease of 21,178)
Technician - 269,286 (increase of 63,892)
Technician Plus - 48,369 (decrease of 80,491)
General - 136,435 (increase of 23,758)
Advanced - 75,812 (decrease of 23,970)
Extra - 106,852 (increase of 28,102)

Total Tech/TechPlus - 317,655 (decrease of 16,599)

Total all classes - 664,905 (decrease of 9,887)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

Note also that effective April 15, 2000, new Novice, Technician Plus or
Advanced licenses are no longer issued, and that all existing
Technician Plus licenses are being renewed as Technician.

Hello, Hans

Well, I've never encountered problems with CW nor RTTY. AM I won't even get into :))

If one looks towards CB, it would seem that questionable behavior has been rewarded in the past, not that I would recommend poor behavior ;)

The 160m band is becoming more popular with a.m. pirates.
Last time I was in Cincinatti & Atlanta, I heard pirates in the
160m band broadcasting most of the night.

True, in fact, I have helped a couple of black Americans get their ham licenses. However, nationwide, looking at the whole big picture, ham radio is a hobby comprised of old white men.

"Upgrade to Technician?!?" From what, Novice class?

> People who read into that that I am somehow prejudiced against the
>Tech's have an active imagination.

The Coslonaut is a PCTA extra. That's an automatic placement
into the Elitist look-down-the-nose at "lesser classes" group.

> Of course there are benefits to upgrading. Sounds like some people
>*don't want* that to get out. Seems like now we're hearing that
>encouragement to upgrade is chasing people away.

Sweetie, the "encouragement" of being anal-retentitve PCTA extras
is enough to chase folks away.

> In addition, this has become an argument that those of us who work with
>the Technicians and encourage them to increase their license level
>somehow disdain those we encourage. Almost as if the tutors in hagh
>school hate 11th graders because they help them pass their courses so
>they can become 12th graders.

THIRD GRADERS can become EXTRAS. You were saying...?

> Good luck with that one guys!

No problem. Your "reasoning" allows replies to be written
automatically...as if "it writes itself."

> Maybe we are just supposed to ignore the Technicians, because anything
>we do appears to "chase them away".

Acting like Elitist PCTA extras will do that every time...

> Talk to 'em about Ham radio - chase 'em away

"Work the world with 'CW'" In 2005. BWAHAHAHAHAHAH....

> Don't talk to 'em - chase 'em away.
>
> Encourage 'em - chase 'em away.

Tsk. You haven't learned any salesmanship or just plain getting-
along-with-others-effectively, have you?

> Funny what happens when people try to defend a bogus argument.

Tsk. That's what we've seen from the PCTA extras all along...

>We don't hate the Tech's

[you haven't learned proper pluralization either...BTASE]

Nah, there's no "hate." As long as the Technicians sit in the
back of the spectral bus and dring from separate water fountains,
you PCTA extras don't "hate" them.

>If they want to upgrade, we are there to help.

[this sounds like a very bad redux of "Uncle Tom's Cabin"]

>Sometimes expressing why they might want to learn something that they
>think they have no use for in order to get there is helpful.

Yes...explain to those "lesser folk" the NEED to "show dedication
and committment to the amateur community" through testing for
RADIOTELEGRAPHY (the cutting edge of communications art).

> And BTW, the reaction to simple questions tells more about the
>"reactee" than it does the person posing the question.

Tsk. You've gone "critical" and your nuclear pile is reacting.

Medical science can cure piles. Get your relief.

All this noblesse oblige in here from the PCTA extras... :-(

>Thank you for confirming something I have suspected for a long time
>now, Len.

What...you've NEVER seen my statement BEFORE? :-)

Do the math. 1959 was how long ago? FORTY-SIX years.

Let's see...in 1959 I was three years from leaving a MAJOR
HF communications complex, a part of ACAN that had existed
since 1942 and had changed its name to STARCOM. Worldwide
network of HF stations...running TTY and Voice...NO "CW."
Big Time in HF.

So, I'm supposed to get into the "cutting edge of amateur
technology" by LEARNING/TESTING FOR RADIOTELEGRAPHY?!?!?

Wow...talk about being BRAIN DEAD in PA!

And now..."you've JUST suspected it?" :-) :-) :-)

BWAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!

[to use a message device beloved by your buddie, the TN
Talibanian...who does that frequently]

Class D CB was a year old back in 1959, I had a nice,
conversion-finished Austin-Healey sports car in Greater L.A.
which then had a population of about 6 million and was
considered to be the aerospace capital of the USA doing high-
tech electronics, was seriously considering changing my
major from illustration to engineering...and I was "supposed"
to be REGRESSING TO RADIOTELEGRAPHY in order to show
"dedication and committment to the ham community"?!?!?!?!?

Wow, yeah, I could "get my very own radio station" and get
"my very own callsign" as a radio amateur!!! I was already
a professional in radio-electronics and had spent three full
years doing HF radio communications in the military. Ptui.
I went to Henry Radio in L.A. and bought a Johnson Viking
Messenger CB that year. Worked great in the aluminum-body

Austin-Healey. Got my "very own callsign" (11W3725)...
BWAHAHAHAH...as if that 'meant' anything.

GAVE UP any thought of "showing dedication and committment
to some amateur community" by learning RADIOTELEGRAPHY as
"cutting-edge technology" in 1959. I should learn morse
just to "talk to the rest of the world?" Been there, done
that 24/7 already.

...and you "just suspected it!" Just HOW LONG does it take
to close the synapses in your mind, whiz kid?

By the way, how many children have you parented?

Digital images would have to be compressed/encrypted also to get the
bandwidth down to acceptable ranges for HF and we're still talking on the
same order of magnitude to do so. Even with a fast broadband internet
connection, I've seen some material that still takes a noticeable time to
download.

> Is that a good way of transmitting the image? It can be. Seems I've heard
> about a digital image transmission mode.
>

Isn't most of the stuff off the internet (mpg comes to mind) digitally
encoded. Even on my broadband connection it will occasionally jerk and
pause. If you have to slow it down to 300 baud for the HF bands so as not to
consume too much bandwidth, that would become even jerkier.

> Does that make the Analog SSTV mode obsolete? No more obsolete than SSB or

I doubt if he's got the technical savvy. Simple arithmetic shows the
inherent problems.

They're not kidding. Nothing is quite as much fun as a robot station
opening up right on top of you. Nothing much to do but complain. Then
wait the obligatory dogs life for anything to happen.

They don't care about things now. I doubt it will get any better if
the rules are just "play nice".

> This group of users would have a specific challenge to

Very true.

Accepted minimum rate for a recognizable "talking head" type video is
32Kbit/second.

I made a test jpg image @ 640 by 480, level 5 (unacceptable for me, but
others may find that okay) Typical scene, some amateurs sitting around a
radio, no large expanses of sky. It was 553.6 Kbits.

Assuming that the transmission rate would be similar to Packet radio at
.3Kbit/second it is obvious that video would be impossible to do live,
and grossly impractical to do as say an mpeg.

That 640 by 480 jpeg might be within the realm of feasibility at just
around 31 minutes. Note that this does not include error checking lags.
And there will be errors.

Note that these are very rough calculations.

Dee:

My "simple math" is actually just your "simple mind" and you cannot tell the difference.

If I send perfect video, encrypted off a DVD you will indeed notice that it slows, pauses and is not acceptable for broadcast--however, if you encrypt the sound to mp3 and the video to avi it becomes childs play for anyone who is technically savvy and results in video and audio which is magnitudes faster than SSTV.

Get away from these ancient amateurs who have gone blind and ask where it has "ALREADY BEEN BEING DONE FOR A DECADE!!!"

Standing there looking stupid is no way to go through life girl!

Right and working about as hard then as you can to discourage them from
doing so

>
> People who read into that that I am somehow prejudiced against the
> Tech's have an active imagination.

BTW active imaginations are somehting that the ARS needs more of.
Personaly I thank you for the compliment.

However you thinking that tell Techs again what they already know isn't
insulting, and insulting someone becuase of their lisense class is
showing a prejudice against the members of the class

>
> Of course there are benefits to upgrading.

of course, and they are well known

>Sounds like some people
> *don't want* that to get out.

No they don't want you druming into in thiere head what they alreeady
know

> Seems like now we're hearing that
> encouragement to upgrade is chasing people away.

But you aren'ty encouaging you are belitting people when you insist on
explaing to them what they already know

>
> In addition, this has become an argument that those of us who work with
> the Technicians and encourage them to increase their license level
> somehow disdain those we encourage. Almost as if the tutors in hagh
> school hate 11th graders because they help them pass their courses so
> they can become 12th graders.

One can only judge by ones experences. BTW those of us interested
don't need the help of "upper classmen", they can manage quite well on
thiere own or help from our own class.

I myself while disaproving of Morse Code have helped people to pass the
code test by operating at VHF sending computer generated morse. Surely
even Stevie will grant that anyone who can learn to follow morse and my
typing at the same time can pass a code test at any speed they can
follow my morse

>
> Good luck with that one guys!

We don't need it, nor your condesending attitude

>
> Maybe we are just supposed to ignore the Technicians, because anything

Mike:

Yes, that quite well proves you don't even have a clue where to begin
and what would be a practical method to accomplish it...

... don't feel alone, these ancient brain deads here are in the same
boat and have ran off and pissed off all those who can do such
things...

... at first I just thought you guys were probably not interested in
video conferance by radio--now I find out you are simply unable and
even lack the basic concept of how it is done!

> It seems that someone "pwetending" to be Woger Wiseman

Poor Saggytits, been sucking too many kiddie dicks and has that
cocksucking lisp again. Of, course, Old Saggytits, forgets to mention
how he sucked his own grandkid off. That is why he has a criminal
record for child molestation.

> repeatedly threatened to TOS various web boards shortly before they were > in fact TOSed.

Seems that it would be you doing that. Oh, and didn't Lardass and his
pedophile friend Holestain get boards TOSed?

And let's not forget how you whined to Steve Gielda to try to get Roger
TOSEd. You are quite the hypocrite, Saggytits.

> That's why Woger is in web board jail.

Nope, only you when you impersonate him, Saggytits. His posts are on
the board, dumbass. You just gotta know how to look for them. Nice to
see you still flaunt your cocksucking lisp, though.

> : > > Nice to see you value his words so. Think the CIA is still running

(aww, Poor Saggytits snipped those hurtful words away, are you going to
cry, Saggytits?)

[restore]
<guffaw> Just like you claimed that the
Marshall County, Alabama Ares website was the one for the Marshall
County, West Virginia Ares group....just more lack of credibility on
your part. But what else is new.
[end restore]

> Indeed (BWHAHAHAHAHAHAHA Poor Saggytits, he lives in a little fantasy dream world)

Wrong again, Saggytits. We won't bother asking you you for any
documentation, because like Nursie, you'll never produce any. Sort of
like how when it was discovered that the "International Radio License
issued by the UN" was discovered to be pure bullshit, you tried to
cover it up with "made you look."

Poor Saggytits, he's too chickenshit to post under his real name, since
he's afraid that somebody will knock his lights out in person. Isn't
that right, you yellow son of a bitch?
P.S. Keep thinking everybody is Roger. It makes you look even more
stupid than you already do.

> [Guvf yvar vagragvbanyyl yrsg oynax.]

Poor Saggytits, using those obsolete methods to hide his comments, too
chickenshit to really say anything. But that's what his whole family
has done for years. White trash wigger trailer trash from TexASS.

Just for clarification:

300 kW = 402 horsepower (assuming 100% efficiency).

Typical 200A 120/240 electric service = 48 kW

OK, SHOW US THE MATH that it can be done on HF within 300 baud. We've already got real time video with audio on VHF and higher but show me it can be done. Explain in detail the encryption/decryption method. And so on.

As an engineer, I can follow the math if you can post it.

And how do you know that the Techs remember everything that they have ever learned? That ability would give them superhuman powers that no other class of hams has ever had.

No one can remember everything they've learned, studied, practiced. This last Field Day was an example. I was operating the VHF station and explaining to Extras how it was possible to have propagation from Michigan to south Texas on 6 meters and 2 meters. Now, they studied this along their licensing path but without having used it, they have forgotten. Is it condescending to answer questions? I don't think so.

All that I do is answer questions that they ask and make myself readily accessible for them to ask questions. For those areas outside my areas of expertise, I send them to some one who does know. None of us goes around trying to force feed them.

Well it just happens to be against the rules to use higher than 300 baud on HF so that is the limit that the data/video/audio signal must fit within. There is a very good reason for that limit. The higher the baud rate, the greater the bandwidth required, and the fewer users can fit on the band. And eventually you hit a baud rate where the required bandwidth is such that one signal won't stay within the upper and lower band edges.

Now if you're talking VHF, it's already been done and your "bright, new minds" are a day late and a dollar short.

Since you don't understand that, you certainly won't grasp the rest....

The FCC says so too.

> I told you to throw away that
> 300 baud modem and get a decent one (or revamp an old phone
> modem to your needs.)

On most of the HF/MF amateur bands, amateurs in the USA are limited to 300 baud for the transmission of "data".

Now it might be argued that sending .jpgs is an "image" mode, and is only allowed in the 'phone subbands, with correspondingly wider bandwidths. But there's more to it than just hooking a typical computer modem to an SSB rig.

Let's say some hams find a way to fit, say, 14 kbaud into an SSB bandwidth with characteristics that will work on the HF ham bands. And suppose they get FCC to say it's OK and all that. The transmission of a 1 meg .jpg will still take more than a minute with no errorchecking.

"The World According to Gorp." :-)

Gorp. Jimmie is on the Trail, mixing metaphors in the bag,
raisin the dead with salty peanuts.

The longer-for-the-past should realize that the FIRST "CW"
Spark, had all the bandwidth of nearly an entire band... :-)

>> "Additionally, contemporary technology offers interference protection at the

>
>So we all need new rigs with all the bells and whistles.

Tsk. You only need to polish your bells and clean your
whistles...and quit blowing that dirty whistle...your pea
is bobbling and giving you a distorted tone.

YOU are the double-degreed engineer in here...YOU give the
"amateur community" the guidance it needs in technology.

YOU said you were a "radio manufacturer," let's see YOU produce
the adapter kits...?

>The separation of modes is a lot older than 60 years ago, too. It
>derives from a whole bunch of reasons.

List those "reasons." Show your work.

The "separation of modes" is no older than 71 years, the
creation of the FCC by the Communications Act of 1934.

Other than making HF amateur radio solely "CW" (for your
personal benefit and "reward") tell all what YOU would
propose for the OTHERS of the FUTURE?

> like yours, Hans. Nor a similar location.

My location is a suburban city lot on flat terrain in the acknowledge "black hole of propagation". My antennas are typical "Joe Tribander" --- one tribander, one "shorty-forty", usual collection of vertical alcoa and horizontal wire, no stacks, no long booms, modest height (55' telescoping tower with 15 foot mast extension, usually nested at about 40 feet). In a word, pretty average for a moderately active HF'er.

> > It makes more sense than a free-for-all.

Maybe to you.

> Most of the worlds hams outside the US already enjoy the
> freedom to use the bands without government-mandated "segment by mode", and I

Doesn't mean they don't happen, just that you don't hear them.

Is the USA like the rest of the world in terms of culture? Number of hams? Enforcement of regulations?

> By and large, hams seem to be a cooperative
> and responsible population with a good record of self-regulation.

As a group, yes. But in certain specific instances (like 75 meters) things are not so rosy.

> I thought the proposal authors stated that concept quite accurately:

Sounds nice. Now tell it to those running robot pactor stations. Or
K1MAN..

> to choose a clear spot on the dial across a greater frequency range.

What amounts to "a clear spot on the dial" varies with mode. All I need
for CW is a couple of hundred Hz. The folks running AM or hi-fi SSB
need 10 to 20 times that much, and their receivers are (of necessity)
much less selective.

> "Intentional interference with communications is a violation of the

Yeah, sure. How is the recipient of interference supposed to identify
the source?
>
> "Automatic or semi automatic data operation not copied by the human ear

> of particular concern under our proposal, since the activity would be
> unencumbered by subband.

That alone makes it a bad idea.

> This group of users would have a specific challenge to
> maintain the good judgment pre-requisite by making certain their
> telemetry-polling systems recognize the presence of other modes and activities
> and avoiding interference to other communications.

They can't even make that happen today. So we reward them by giving
them the whole band to play in?

> Chronically failing to do so
> would remain an actionable violation under existing rules against deliberate
> interference, since it could be shown such judgment had not been exercised.

If they can even be identified!

> "We contend that the goal of voluntary selection of operating frequencies for
> improved spectrum use is best achieved through real-time assessment of
> variables

> in propagation and radio traffic load. Efforts to improve spectrum use are
> currently constrained because these variables cannot be accommodated with
> fulltime, rigidly defined sub-bands.

Sure they can, the authors of the proposal just don't want to.

--

Let's get down to what this proposal is really all about:

1) More room for the 'phone folks/less for the CW & data folks

2) Less constraint on the robot-data-mode folks

It's all gussied up with fancy, emotional verbiage like "real-time
assessment of variables in propagation and radio traffic load" but the
above two things are what it's really all about.

What it also amounts to is *rewarding* the use of
spectrally-inefficient modes. IOW, if the 'phone band is crowded, try
CW, PSK31 or some other mode that doesn't need so much spectrum!

>
> "Additionally, contemporary technology offers interference protection at the

So we all need new rigs with all the bells and whistles.

The separation of modes is a lot older than 60 years ago, too. It
derives from a whole bunch of reasons.

Don't know if I talked about Field Day yet or not but here goes anyway.

One of our participants got a new personal best for Field Day of 1000 contacts. Our VHF station got 89 contacts from Michigan to Texas and Florida due to a nice 6m band opening Saturday night, which for our club is probably the best that we've ever had. Our club cook did his usual outstanding job. Every year he plans out and takes care of everything for a pack of busy hams. Our Field Day site stayed dry but there were thunderstorms in the general area. So when I took a try at putting messages into the NTS (something new for me), we were battling tremendous static on 80m in our area. I did manage to get 4 messages submitted but they closed the traffic net early due to the static. Now I have a backlog of messages to work off from the group that I collected at work.

A number of club members were impressed with the VHF contacts that we made.

We had wickedly hot weather here for the Field Day. So that cut the attendance some. Many people who normally attend ended up having to work this year on the weekend. That cut the attendance some more. But all in all it was a fine Field Day.

>Dee:
>
>My "simple math" is actually just your "simple mind" and you cannot
>tell the difference.

Dee is smart. But, her emotional LOVE of "CW" over-rides her
reasoning ability.

>If I send perfect video, encrypted off a DVD you will indeed notice
>that it slows, pauses and is not acceptable for broadcast--however, if
>you encrypt the sound to mp3 and the video to avi it becomes childs
>play for anyone who is technically savvy and results in video and
>audio which is magnitudes faster than SSTV.
>
>Get away from these ancient amateurs who have gone blind and ask where
>it has "ALREADY BEEN BEING DONE FOR A DECADE!!!"

Actually, FOUR decades. The Bell Systems' video telephone.

There's a lot of its history on the Internet. I can dig up
the URL from an archive CD which has digitization of Bell
Labs documents in it...but, it's no use taking the trouble
because the "CW" LOVERS in here won't have any of it.

This dial-up modem I and hundreds of thousands of others are
using sends/receives (full duplex) 56K rates in a 3 KHz BW.
To follow the "simple arithmetic rules" (from Carson's
series equations), the telephone bandwidth "should be"
about 100 KHz! Obviously it isn't. 100 KHz BW down to fit
in a 3 KHz BW! :-)

MPEG4 compression-expansion for real-time video is quite alive
and well on our Comcast cable digital feed. About 230 TV
channels in the bandwidth (digitally encoded) where we had only
about 60+ in analog form. BTW, that includes the DTV already
broadcast which is also on the same digital cable feed...and
DTV already has over 3:1 compression to fit inside an alloted
6 MHz BW. [more pixels than analog equivalent but an exact
number will bring out those nasty nit-pickers who will midsdirect
the thread into some "never ending story" about compression]

Military small-unit field radios have, for two decades, used
digitized VOICE that fits inside a 3 KHz BW, with or without
encryption. Standard COMSEC, either internal (built-in) or
external as a peripheral unit.

There's lots more examples of digitization and compression, from license-free FRS toy walkie-talkies to the 2.4 GHz cordless phones to tens, no hundreds of thousands of WLANs at work and at home, all cramming lots of data into less bandwidth than thought possible...carrying with it real-time video from closed circuit TV cameras and (analog) wide-band music. Hundreds of texts available at Amazon on the subject.

"CW" LOVERS will have NONE of that. Their snarly tones are like the old Spark signals...growly and taking up bandwidth equal to all of 75 meters.

>Standing there looking stupid is no way to go through life girl!

There's no accounting for taste when emotionalism over the narrowbanded amateur "CW" LOVE pushes aside logical reasoning.

None of the "CW" LOVERS in here will have any of it until the ARRL anoints the subject with a papal Sumner blessing. Amen.

I can understand your "not giving" about others. :-)

Frankly, Scarlet, I don't give a damn for young teeners out in
the boonies suddenly getting ELECTRICITY in 1954! How about that?

Too bad you couldn't have tapped into the 300 KWe out of each of
the 16-cylinder marine diesels running generators at Kashiwa in
1954. Would have lit up your life some...

Of course the main room at Kashiwa transmitter building didn't
have but about 8 transmitters in 1954, there would be 43 Big
Ones in there by 1956 and completion of the move. Not to
mention wire antennas all over the airfield, including full
rhombics. 1 KW minimum, 40 KW maximum RF outputs. Not a single
one of them using on-off keying radiotelegraphy. Sunnuvagun!

When one stood at one end and looked down the row to 150 feet or so in the distance and saw nothing but high power HF transmitters side by side on each side, it was bound to have an impression. Then out in the microwave building with four 24-channel microwave radio relay terminals that were the main link with anyone that HAD to be kept ON 24/7. [not to mention the old carrier bays]

Perhaps not as much as suddenly getting electricity where one had nothing but wind-charged batteries but then that's us "city boy sissies" I'm sure you'd apply. Life must have been extraordinarily TOUGH way, way out on the farm. You have my sympathies. Nothing else. Just sympathies. :-)

Yup, I read it. I have mixed thoughts about it. I don't know that the present system is "broken", but I wouldn't mind having those robot stations all over the band instead of just the lower portions. Maybe they would be less likely to knock us PSK31 people off the air..

Thanks, unfortunately W5YI doesn't have a complete set, they're missing 1975-1983 apparently.

I a friend of a friend claims he's got a 1979 callbook with my callsign in it, but he's neither fax nor scanner enabled, so I'm still looking.

Poor Lennie the loser is a real trip. Military comms and CB radio. Then compares it to ham radio. Bottom line, the only thing they have in common is the fact they operate on HF radio....period.

Bottom line is he couldn't pass the CW test, and gave up. Now we get to listen to him brag about shoving a broom around a transmitter site while a lower ranked enlisted man. BIG DEAL.

You could be right, sigh. I feel a little guilty for doing it this way, but if the FCC says it's good, then who am I to argue. Besides, I bet a few of them couldn't pass the new element 3. I took it in 197<8-9> timeframe, and it's a new ballgame.

>understand it before. You don't understand it now.

Here's a a part of the webpage at the FCC website:

http://wireless.fcc.gov/services/amateur/about/communications.html

About Amateur Communications & Operations

The following are answers to frequently asked questions about communications appropriate for the amateur service. See Part 97 of the Commission's Rules, 47 C.F.R. Part 97, ("rules") for the complete regulations.

One-Way Transmissions

Q. What types of one-way communications are amateur stations authorized to transmit?

A. Section 97.111(b) provides for one-way communications. In summary, auxiliary, beacon, space and stations in distress are specifically authorized to make certain one-way transmissions. Additionally, an amateur station may transmit the following types of one-way communications:

1. Brief transmissions necessary to make adjustments to the station;

2. Brief transmissions necessary for establishing two-way communications with other stations;

3. Telecommand;

4. Transmissions necessary to providing emergency communications;

5. Transmissions necessary to assisting persons learning, or improving proficiency in, the international Morse code;

6. Transmissions necessary to disseminate an information bulletin; and

7. Telemetry.

Q. What is an "information bulletin"?

A. The term is defined in Section 97.3. It is a message directed only to amateur operators and consists solely of subject matter of direct interest to the amateur service. The control operator of the station transmitting an information bulletin is responsible for determining that the subject matter is of direct interest to the amateur service.

Q. Does an amateur station transmitting information bulletins have to share the channel?

A. Yes. Section 97.101 provides that each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. A specific transmitting channel is not assigned for the exclusive use of any amateur station. Section 97.101 also provides that no amateur operator shall cause interference to any radio communication or signal. There is no exemption for amateur stations transmitting for information bulletins.

Q. Is broadcasting prohibited?

A. Yes. Section 97.113 prohibits amateur stations from engaging in any form of broadcasting or in any activity related to program production or news gathering for broadcasting purposes.

Q. Is there an exception to this prohibition?

A. Yes, there is one exception: Communications directly related to the immediate safety of human life or the protection of property may be provided by amateur stations to broadcasters for dissemination to the public where no other means of communication is reasonably available before or at the time of the event.

Q. What is "broadcasting"?

A. Section 97.3 defines the term "broadcasting," in the context of the amateur service, as a transmission intended for reception by the general public, either direct or delayed.

There's ebay. Someone may be looking to unload stuff like this.
Then you could bring the entire callbook with you and that would
be plenty of evidence. But this will take time.

Without error checking the resultant picture will almost certainly
not be a picture.

The "fuzziness" of analog signals is a big part of why they work at HF.
A bit of static or other noise might put some white spots or even a line
or two of noise on the SSTV screen, but they can wreck a digital
transmission without error checking.

So much more than regulations that need grasped. I await the technical aspects of the digital image transmission system.

Dee:

I don't know about how the laws cover physics in your neck of the woods, but here it goes like this:

The "bandwidth" of my phoneline just happens to be about 300 hz to 5000 hz (this can vary widely with equip--but the phone company pretty well guarantees this minimum) and, my computer modem uses this "audio bandwidth" to send/recv data at speeds up to 5.7K bytes per second.

Now, I just happen to know a guy with a transceiver which he put mic level jacks on to interface with a transceiver and a USRobotics external 57K modem and set to software flow control and ignore the fact there is NO DC carrier voltage on the line. Since the transceiver he hooked the modem to has a modified audio recv/xmit bandwidth of approx ~100 Hz to ~8K he has PLENTY OF BANDWIDTH.

... now really, a high school student should be able to manage this--indeed, the one I seen did... the USR modem takes care of data compaction and error control--pretty straight forward really... I expect the other hams will "discover" and present this "revolutionary" idea within the next decade. <grin>

... from there it was a simple matter to take/input the audio from/to the transceiver from the computer sound card and do enhanced encryption/compaction by means of software on the digital signals--basically you find very similar in cutting edge technologies--and while I am not 100% certain--I would almost bet it is done nearly 100% in a similar fashion... being a software engineer, I can almost guarantee that part--I am a little less sure about how they implement the hardware and I rather doubt it is an ancient 56K phone modem ROFLOL!!!

Works equally well for data/voice/video. That is all taken care of in software, you simply need to know what type of data you are getting, if you try to interpret voice as text or the opposite--I am sure you can see there would be a problem...

I might add, the first time I seen this done was over five years ago... so really, the hams may have it as quickly as another five years! <innocent look>

Never made that claim, so the rest of the para is garbage

but ALL techs know that HF and it's current required Morse allow for
easier long distance comms than VHF , we are told over and over again.
>
> No one can remember everything they've learned, studied, practiced. This

In the case you describe it might or might be condesending. It is
emabarishing to the ARS that extras class operators don't know that,
your question is also unrelated to the topic at hand

A tech may not know ether say 10 m can support a QSO from Michigan to S
texas but he knows that some HF will likely do so

Also if you don't mind paying the fee, the FCC can provide a cofirmation.
But it takes a while to get confirmations of old paper records.

I used to fix them. Charged a few bux, met some good people, and some
pure idiots. Talked a bunch of em into getting a ham ticket. Now I talk to
the ex CBers on 2m and HF. Does that count?

No need to feel guilty. Besides if look at the history of licensing the
earliest requirements were only 5wpm on code.

I've never seen that exact story before now, Len. I don't
think you've ever posted that you

"thought it might be neat to get a ham license in addition
to the Commercial First 'Phone of 1956. Got up to 8 or 9
WPM and wondered what the hell I was wasting all that
time for?"

Maybe you did post that before, but I missed it. Easy to do,
considering the amount you post here. You're invited to
show us where you did post that exact story before.

Thanks again for confirming something I have suspected
for a long time now, Len.

I also might add that with "DVD Decryptor" and "AutoGK" you can
compact a full 2+ hour DVD to a regular 650 meg cdrom which is
playable via windows media player on virtually ANY windows computer
having minimal specifications.

Indeed, it may help some to play with this as it really gives one a
picture into the power of the medium which is being missed by hams...
as they stoke their vibroflex's...

... the terms "DVD Decryptor", AutoGk, Divx and avi will provide much
enlightenment...

```
An even better way to setup anonymity is with mail2news and a remailer,
it takes a bit more knowledge and work but is worth it in the long run.
A google should supply one with all necessary details and tools.

And how does that allow it to be transmitted over the amateur bands in a useful time period??? 650 meg is still far more than can be sent over the HF bands in any practical amount of time.

> Indeed, it may help some to play with this as it really gives one a
> picture into the power of the medium which is being missed by hams... as

It may help you to calculate the transmission time of 650 meg at only 300 baud. And don't tell me the rules can be changed. As I said before, that's not practical as the speed that would be required to do the type of transfer that you want at any bearable speed would wipe out an entire band or more.

So tell us the magic encryption scheme that lets you transfer that data in a matter of minutes.

Dee D. Flint, N8UZE

Yes and no. 99.99% of us would stay within the IARU bandplan, but that
includes large swathes of phone spectrum where we aren't allowed to go by
the current FCC rules. Voluntary means we get to choose the bandplan, and I
would choose IARU Region 2, not ARRL.

Dee:

Are you arguing:
1) That people should not do this?
-or-
2)It is impossible?

It started out that it was impossible--of course that is ridiculous
and only old hams would think it was, the technology has existed and
been in use for at least a decade (and is a prime example of why the
tech savvy young crowd make faces at amateur radio.)

Now you want to start arguing rules--I decline--I have NO TIME for
that... take rules up with the lawyers here, none of that interests
me... I will police myself or suffer the consequences, others only
need worry about themselves...

... why anyone would think 56k is "dangerous" on HF should have their
heads examined... it is the audio bandwidth that is of consequence
here, not rf bandwidth! (with the exception of FM which it can be used
on with even greater speed and success!) Spread Spectrum would be
much faster, 1-100 mb per sec should be no problem and virtually
impossible to detect, if done over a wide enough spectrum...

As far as the hardware, enough information has been given in a
previous post of mine for a computer/radio savvy tech to stick one of
these puppies together on a weekend, any second year college student
in CS/EE should be able to handle the software, this is assuming an
ibm/clone/work-a-like, I have never seen it done on a mac or
mainframe, but possible I am sure...

Now you are just standing there looking silly...

I plead ignorance of the IARU bandplans. Do you have a link to 'em??

Even without seeing them yet I like the concept.

Almost nothing could be any worse than the state of health care in the US.
We could do a lot worse than Canada just by doing nothing.

But it is 'broke'. If I have to go split to talk to the DX, that's quite
broke enough to need fixing.

There is no 60M "band". US amateurs are allocated 5 discreet 2K8J3E channels centered on 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz and 5405 kHz.

Again, the league's bandplan differs from the IARU's. The IARU sets aside all of the amateur exclusive section (1810-1850) as a DX window, and makes that half CW (1810-1830) and half phone (1830-1850). Now let's see, what do the league recognise as a DX window? Isn't the whole thing 1830-1835? And don't they assume that to be CW? - In the phone half! But, the bandplan is voluntary, that is whichever one of them you choose to follow, or none. The only real problem is that the league's version legitimises the local old fart's net on 1845, for example, instead of placing it properly in the DX window. Not that they would have to move anyway, because it's voluntary. That's what voluntary means.

Ohh, one thing I didn't point out, mainly because I thought it would take longer for most to catch on is--it is much better to skip hamster and argosoft and write a smtp/nntp client which will post news articles directly to the remailer--this will result in 100% forgeries and cannot be told from the real ones... this will be your next step...

But at least we now can leave the old women reading headers standing in a corner--if someone wants to forge a post--consider it done!

Now we can get real...

>(of course now he will deny he actually tried to take the test.....well at
>least that is how he remembers it).

Tsk, tsk, tsk, Dannie thinks he is kicking stray dogs again...

I DID take THE test...with the FCC...in Chicago...at the beginning of March, 1956. For a First Class Radiotelephone (Commercial) Operator license. Passed. One sitting, interrupted only by a fire drill in the Federal building that day.

NEVER took a ham test with the FCC, VEC, or FDA.

Took a couple of practice written tests on the Internet...passed them, too. No problem. Rather low-level knowledge of radio, mostly memorization of existing regulations.

Has Dannie ever taken any COLLEGE LEVEL ENGINEERING COURSES? And the TESTS that go with those? I have. Passed them, too.

Actually, I've "passed" the most stringent TEST of all...using and applying gained knowledge to insure a paycheck arrived regularly from my employer (as an electronics design engineer... and income derived for my partner-ship (which involved a base and mobile radio requiring that FCC Radiotelephone license). Passed those, too.

Just what DID Dannie Dipshit "pass" besides gas and a morse code test? "Out" maybe?

Have a nice evening down at the VFW hall tonight. Try to avoid that quadruplegic lest you get beat up again.

Temper fry.

><LenAnderson@ieee.org> wrote in message

Oh, my, Dannie boy finished a whole six-pack of Billy Beer and
now is feeling very "brave." Time for him to garbage-mouth
some veterans...

>Poor Lennie the loser is a real trip. Military comms and CB radio.

And military VLF as a civilian...and military and civilian radio
as a civilian...and civilian maritime radio as a civilian...and
civilian mobile radio NOT CB as a civilian...plus lots of
microwave radio things for the government and civil life as a
civilian...leaving out civilian broadcasting as a civilian.

>Then compares it to ham radio.

Couldn't possibly do the mighty, noble, top-of-the-line, cutting-
edge manual morse that the Archaic Radiotelegraphy Society does,
no sir!

>Bottom line, the only thing they have in common
>is the fact they operate on HF radio....period.

WRONGO, Mongo. VLF, LF, MF, HF, VHF, UHF, microwaves (assorted
bands) on up to 25 GHz.

>Bottom line is he couldn't pass the CW test, and gave up.

You betcha, sweatbreath. WASTE OF TIME forty-six years ago.
Still a waste of time for me.

Still a waste of time for anyone who wants to enter the hobby
of amateur radio through FCC-regulated testing.

>Now we get to
>listen to him brag about shoving a broom around a transmitter site while a
>lower ranked enlisted man. BIG DEAL.

Poor Dannie boy, drunk as a skunk and stinkier.

Dannie boy, you must stop ranking people according to YOUR
accomplishments.

"Lower ranked?" As an E-5, three up and one down, I was in the
lowest category of NCOs, true. Supervisor, not a broom pusher.

Speaking honestly, sweatbreath, I wouldn't put YOU in any QSY or maintenance task back then in the early 1950s. The gear was just too complex for someone who thinks the top-of-the-line in radio is doing manual morse. Tsk.

Nobody did manual morse at ADA/RUAP back in the 1950s, Dannie. TTY and RTTY. One had to read in order to put the right tapes on the right machines. Reading would have been too difficult for you. Tsk, tsk.

Let us know when you sober up...

Dee:

If one ever gets serious about using HF for video, and HS data transmission, this:
http://www.thiecom.de/english/g313i/
is an excellent investment. The digital signal can be pulled directly off the PCI bus in the computer and fed to software. This company supplies the software framework for just about anything you can imagine, if you know how to code or know someone who does--the sky is the limit...

No more than CW opperators stick in the bandplans at VHF during FD I
was having to deal with CW sent well out of the bandplan on 6m
>
> > 73, de Hans, K0HB
>
> w3rv

I worked 6m over FD including that wonderful band opening and had no problem
with out of bandplan 6m. Perhaps you are unfamiliar with the CW allotments
of the bandplan?

Excerpt from http://www.arrl.org/FandES/field/regulations/bandplan.html#6m

50.0 to 50.1 -- CW, Beacons (by regulation CW only)
50.1 to 50.3 -- SSB, CW

>

But fix it from the DX side. Do you really want to limit us to the same 40 meter band that they have? We'd LOSE part of the band. Actually this fix is being worked on. At the same conference where the ITU changed the treaty requirements for Morse code, they also put in a scheduled change for allocation of more of the 40 meter band to hams on a world wide basis. By something like 2007 or 2009 (I forget the year), hams outside this region will get up to 7.200 exclusively allocated to amateur radio so that they will overlap into our voice privileges thus making split unnecessary. Of course some will still use split just as some use split on bands where they don't have to today.

Some countries have already allowed their amateurs to use the new allocation in advance of the turnover date.

There are lots worse places for health care. That doesn't mean the US
system is the best, or even acceptable.

My point was that if you suggest to most US citizens that we
accept Canada's health care system, they say no.

> We could do a lot worse than Canada just by doing nothing.

I've never had to deal with their health care system, so I don't know
if it's better or worse. I do know that for some strange reason, the
same prescription drugs made in the *same* factories are sometimes
significantly less expensive in Canada.

> that's quite broke enough to need fixing.

You have to go split to work DX for two reasons:

1) On 40 meters, hams outside Region 2 only have 7000-7100

2) On the other HF bands, and on 40 meters for DX in Region 2, the DX
chooses to work split. They could work transceive if they wanted to,
but they *prefer* to work split.

Note that DX in Region 2 often works split on 40 even though
they have 7000-7300.

If the rules are changed so that you can call the DX on their
frequency, they may still decide to work split.

7100-7200 will become worldwide exclusive amateur in a few years. Some
countries outside Region 2 have already opened 7100-7200 to their hams,
and SWBC continues to move out of there.

Yet even if we eventually get 7000-7300 worldwide exclusive amateur,
the DX will probably still work split.

Guess not!

Do you think the number of hams doing similar things on voice is more
or less than those doing such stuff with Morse Code?

I think bandplans are great, Jim. A bandplan is a dynamic construct, generally agreed by the band users, which adapts to "market forces".

But FCC doesn't hand out dynamic bandplans; they hand out static band-mandates which tend to remain unchanged for multiple decades (a geologic age in a hobby which is charged by regulation to "contribute to the advancement of the radio art").

Sure, but that's not the issue.

("I spell my name...DANGER!")*
>
> You don't (mostly) agree with the thing,
> but you think it would be better for
> FCC to give it "a lot more attention"?

Yes. You see, I have this wild concept that even ideas I
disagree with are better off being discussed than being
hidden away. You know, that whole "democracy" thing...

I think you have come up with a proposal that represents a
clear, coherent and concise point of view. That I don't
agree with most of it is immaterial; I think it at least
deserves the same exposure and discussion as the 18 other
proposals, most of which are far less clear, coherent or
concise. (like the one that would put beginners on 160
with limited power - wassup with THAT? Or the NCI and
first NCVEC proposals, that are tunnelvision to the max.
Or the second NCVEC proposal...)

IOW, I think your proposal deserves to be discussed in a
far wider forum than rrap.

If the US amateur community as a whole rejects it, then no
one can say it wasn't presented at the appropriate time.

If the US amateur community as a whole accepts it, then
no one can say it was the result of some small group
pushing their ideas on others.

The proposal of the "think tank" contains only one element
of your proposal. You were *years* ahead of them!

There's still time to put it into proposal form and send it to FCC as
a formal proposal.

Why not?

Suppose it were sent to FCC, and they gave it an RM number.
And suppose it drew a lot of comments that supported it. Say
75% in support.

Who could then say it wasn't what the amateur community wants?

The FCC hands out whatever will cover their own ass. Meaning,
top priority at the commission is job preservation, not the advancement
of communciations. FCC bureaucrats do whatever is necessary to
preserve their paycheck, while continually hiding the fact that the
commission is a dinosaur in an advanced age.

>the limit...

John, lots of us know of data compression and maybe a few
radio amateurs will acknowledge the elegant work of Claude
Elwood Shannon back in 1947. But, that is really NOT the
issue in here. Status quondam is the issue.

Even worse, it is the stubborn, hidebound, refusal to break
out of the antiquated standards and practices of pre-WW2
times to meld with the rest of the world of modern times.

The only "code" allowed by these dino-denizens of the past
is MORSE code. Anything else, such as (horrors) "source code"
is nothing but a bunch of NOPs with an occasional HCF. Those
that have bought into it and passed the morse test will do
more flaunting of their morsemanship than a convention of
actors in Hollywood bragging of their credits. [they have
no Variety]

Using "examples" of half-GigaByte files "expected to be sent
over little teeny narrowbanded enclaves of spectrum is itself
an example of their non-thinking, non-research, non-educated
attempts to stall any sort of progress. They can't do the
numbers (despite flaunting of non-amateur titles), won't
bother with looking up things, everything-is-just-fine-as-
when-they-first-joined-long-ago-thankyouverymuch.

Case in point: DRM (Digital Radio Mondial). Digitized audio
on HF, now being transmitted (over two dozen programs now
listed), capable of overcoming the selective fading common
to the "wow" heard so many times on analog BC, tested for over
four years on HF. High-quality audio fitting within a 12 KHz
bandwidth, an occupancy no greater than present-day audio on
broadcast. DRM may not be the technical best, but it IS a
WORKING system. It works on LF, MF, HF, VHF. By test.

A few years ago in here a bunch of narrowband, narrowthinker olde-fahrts exclaimed and exclaimed that "it won't work!" That was during the successful testing phase of DRM. The same group also decried GMDSS as "unworkable!" even though the maritime community had already researched and tested it and approved it worldwide. Morse code on 500 KHz MUST continue they said, ignoring what the SOLAS folks had already determined.

The general idea of DRM, scaled for 2.5 KHz voice-only audio bandwidths is eminently possible on HF. Effects of selective fading on HF will be less than the wider bandwidth of broadcast audio. Further, since it already IS in digital form, it is applicable to direct-sequence spreading and the ability to put many signals on a given band without any mutual interference. The narrowband, narrowthink amateurs will have none of that. They will yank out the "12 KHz bandwidth" of DRM and shout it is way too broad for amateur use...while they totally ignore the scaling that can (and sometimes is) done for narrower band audio.

The narrowband, narrowthink status quo-ists will demand "already-done, tested, approved, on-the-market" products to "demonstrate" that it will work. [they have in the past in here] :-) In other words, "don't bother me until I see the ads in QST" kind of mentality which seems to have become standard on the USA amateur scene. The narrowband, narrowthink hams are content with their narrow slices of spectrum, the bands appropriately sliced up into "bandplan" segments like separator boards in a sandbox. They have achieved Titles in their federal authority and haughtily parade that to play in the "nicer" parts of the sandbox.

Analog-ONLY is the cry of the narrowband narrowthink group. Keep it SIMPLE so that the most theory they need is just Ohm's Law of Resistance. The have resistance to anything more complex. Stay with the gamesmanship, enter the contests for "radiosport" and win nice certificates (suitable for framing). Forget the exploring of the new, trying out something different. Too HARD to think. Follow preset rules and fill in the blanks. Big Brother in the NE will protect them. Offshore designers and makers will provide they radio toys, all their bells and whistles. :-(

"Shannon's Law?" Ain't in Part 97. Fergit it...

Jimmie is Johnny-on-the-spot when it comes to ANYTHING involving
morse code! :-)

The ONLY connection with amateur radio is that the Grimeton LW
transmitting station has become a Swedish historical monument
and is fired up just once every year and that the "station" is a
member of the Swedish Amateur Radio organization. :-)

Grimeton is the name of a small town rather east of the city
of Varberg on the west coast (I've driven through it on the
way south). The accompanying LW net receiving station WAS at
Kungsbacka near Goteborg (Gothenburg to English speakers) but
has been dismantled long ago; one of my cousins lived there for
many years. Grimeton went into full operation about 1926 and
continued for about three decades, including through all of
WW2 to North America. It has been a museum for a longer time.

SAQ - Grimeton has the only WORKING LF Alexanderson Alternator
in the world. Not that it matters much to USA amateurs since
the FCC has not obliged the ARRL with providing any ham bands
below MF. Ever. :-) Sunday, July 3, is Alexanderson Day in
Sweden, a nice tribute to one of the true pioneers and innovators
in early commercial communications radio.

Ernst Alexanderson is highlighted in the IEEE History Center.
Not many radio amateurs could afford 50 KW and higher transmitters
(much less build one in their garage) so the ARRL doesn't bother
to mention his work much. With wavelengths of 20 KM, it's a bit
difficult to build a half-wave dipole on a residential lot. :-)

But, this is NEWS according to Jimmie (even though Grimeton is
on the air once a day each year) and his private BLOG here must
be filled with such gems of "amateur radio policy" info...

>Or the second NCVEC proposal...)

Of course, anything that doesn't feature morse code
and/or include morse code testing in the future is
relegated to "trash." [very "democratic"]

>IOW, I think your proposal deserves to be discussed in a
>far wider forum than rrap.
>
>If the US amateur community as a whole rejects it, then no
>one can say it wasn't presented at the appropriate time.
>
>If the US amateur community as a whole accepts it, then
>no one can say it was the result of some small group

>pushing their ideas on others.

Define "amateur community."

Then go look at the Radio Communications Act of 1934 and
the Telecommunications Act of 1996 and show where the
ONLY considerations for amateur radio regulations are
to be put before the "amateur community."

Are ONLY members of the "broadcasting community" allowed to
comment on Mass Media Broadcasting regulations? Are ONLY
members of "private mobile radio community" allowed to comment
on PLMRS regulations? NO. The FCC - obligated by law - is
REQUIRED to listen to ALL CITIZENS' comments. That is true
democracy.

True democracy is NOT a small group of a private organization
in one corner of the country determining everything in amateur
radio.

Based on those EIGHTEEN proposals STILL before the FCC and with
thousands of comments filed on them, there is NO SUCH THING as
the "amateur community." There is an obvious NON-harmonius
polarization evident within what MIGHT be called an "amateur
community."

You have NO "solution" to bring harmony to this mythical "amateur
community" with the possible exception of everyone holding fast
to the status quo, agreeing with the self-appointed mover-and-
shaker "representative" called the ARRL. None of those "solutions'
are democratic or even egalitarian. They are merely totalitarian
and antiquated as well as biased and elitist.

>There's still time to put it into proposal form and send it to FCC as
>a formal proposal.

>Suppose it were sent to FCC, and they gave it an RM number.
>And suppose it drew a lot of comments that supported it. Say
>75% in support.
>
>Who could then say it wasn't what the amateur community wants?

Trying to be "logical" on hypothetical situations of your own
devising is on the road to good old reducto ad absurdum city.

There are EIGHTEEN proposals before the FCC and roughly half
of those have been before them for two years. Has the FCC
acted on its own "housekeeping" NPRM for regulations yet?
And you now want to add a NINETEENTH proposal which - as you
presuppose - will garner a "75% 'approval'?" Ridiculous.

Where is this illustrious, "representative" league in terms of
going "in there" and shaking the regulatory process tree?
This "representative" attempted to oppose the revisions of

S25 despite the IARU already taking a stand in favor of that revision - publicly - two years prior. This "representative" failed to bring about a 60 meter amateur band and was relegated to appeasing the five channels instead. This "representative" (of all hams) has continued to fail in obtaining a below-MF amateur band for years...even though Europeans have enjoyed such privileges for years.

The "amateur community" is NOT the imaginary cohesive group of clubby members you fantasize. It is a wide-open diverse group whose "lowest classes" (Technicians) are fast approaching a MAJORITY of all U.S. radio amateur licensees. You MUST begin thinking much farther out than your own personal desires in order to advocate some "action." So far, you've NOT demonstrated any of that.

Len:

You are right, they do look like a little like a dutch boy with his finger stuck in a dyke.

The only part which amazes me is that they fail to see or feel the flood waters which have already risen above their heads. This is all going on and no law, person or group even slows it a bit. Progress has a life of it owns, it waits for no man, no group, no law...

Funny thing is, amateur radio was implemented with the idea these "experimenters" would give back to the community in advances in the field--somewhere this got totally reversed and now they cry for more laws and regulations to halt progress--now I have never seen a better display of insanity!

But, somehow they think they can argue this as a "service" to their fellow citizens. Krist, the egyptian high priests who held their whole nation hostage were more progressive! At least they made good durable mummies...

In the case of FCC regulations, any person or group that is interested
enough to comment on proposed revisions to the
FCC rules affecting amateur radio.

That includes but is not limited to licensed radio amateurs,
unlicensed persons who are interested in amateur radio,
equipment manufacturers, clubs, national, regional and local
amateur radio organizations, and other interested parties.

I've never advocated that *any* interested party not be heard.
Never told anyone to "shut the hell up" in a newsgroup...

What's your definition of "amateur [radio] community", Len?

--

btw, thanks again for confirming what I had
long suspected....

No scatalogical implication, no reference as to where in the dyke. I
hope it is just a mispelling

Poor Lennie the loser, being such a historian on military and all, just
can't get that E5 Chevron arrangement right yet. Oh well....we know how you
are Lennie me boy. Too bad you don't realize it.

All this radio experience is as a what ? Operator? Gee Lennie, how hard is
it to push the button and yap into a mic? Or maybe it was you were a fixer
eh? I've seen the Army Tech Manuals, What was your echolon me boy?
Field perhaps? Not even allowed to change a component, other than a tube.
Hope your TV-7/U tester was in top notch shape.

Does the MOS 31V mean anything to you ?

They don't have to collect it. They just pass it down the line to the next
agency of the Federal Government that does.

FCC did it job just fine.

To copy the morse. saw a lovely demstration of it on FD,

Indeed with the cw trafic I saw this year on 6m I have been encouraged
to added such a cappicaty and switch between 6m vioce and 6m cw next
year for FD

Very impresive indeed Lennie. Got any proof? Your the one that demand proof all the time....put it up right here. You have a scanner, right?

I never had a need for the 1st or 2nd commercial. Most to all of my electronics technicial work was done with military contractors, or companies that had a 1st ph there already. Of course you do realize that all the first pnones and seconds were just dropped away. So they really didn't amount to much anyway.

Sorta like the ham tests of today. And hey good deal on passing the on-line tests of today. Pre teen age children do the same with ease. What does that tell you Lennie?

I don't belong to the VFW Lennie. They didn't want any Vietnam Vets to join a few years ago (course they want us now), so I gave them their wish. I am a lifetime member of the DAV however. Oh you know them don't ya Lennie? Only way to get in is to be disabled while in military service and have a service connected rating.

We don't have a local branch I'm sorry to say. I may join with the Vietnam Veterans of America, ain't decided just yet.

See ya.

The KKK, as well as, the Nazi's, the commies all have the same rights
as the rest of us. There are those at the FBI that would like to change
that but thier it is

as to the uniforms of KKK's that info is in the public domain

"A dyke (or dike) is a stone or earthen wall constructed as a defense
or as a boundary. The best known form of dyke is a construction built
along the edge of a body of water to prevent it from flooding onto an
adjacent lowland. However dykes have also been built as field
boundaries and as military defenses. More on this type of dyke can be
found in the article on dry-stone dykes."
en.wikipedia.org/wiki/Dyke_(construction)

I fail to really see your point, however, I did not miss the fact you
point to your lack of education, I wonder if that was really your
intent?

Tsk, clever wordplay in this heavily-homophobic group of PCTA
extras isn't going to be noticed much...:-)

>The only part which amazes me is that they fail to see or feel the
>flood waters which have already risen above their heads. This is all
>going on and no law, person or group even slows it a bit. Progress
>has a life of it owns, it waits for no man, no group, no law...

Well, my take on THIS group of worshippers at the Church
of St. Hiram is that they are (unconsciously) try to hold
back the time. They seem to long for an earlier time when
they got started in ham radio, at least three decades past.
By holding onto those "early days" they feel they can stave
off encroaching age.

Three decades and more ago were a "simpler time" in radio.
Most radios were analog. Only a few high-end models had
things like digital readout of frequency, for example. DSP
was a thing for the future. These old timers could barely
understand basic analog circuits in "radio." Give them a
digital thing and they were lost. ["whuzzat? a lil bug?
we don' need no stinkin' digital! give us "radio!"]

Claude Shannon gave the entire communications world his laws
in 1947. Trouble is, Claude's landmark paper used a Teletype
as an example. Olde-fahrt morsemen didn't pay attention,
thought it didn't apply to their beloved "code." It did, and
the ARRL Handbook early on had the (unreferenced) statement of
noise versus bandwidth (of filters) and never went much farther.
Few hams had teleprinters in 1948. They had beloved MORSE
CODE! Supposedly morse code information "does not apply" to
Shannon's Laws...and has been argued as such in here in the
past (mainly by a now-SK Missourian). Sheesh. (to be polite)

As Yogi Berra said, "The future ain't what it usta' be..."

>display of insanity!

It's the antithesis of experimentation. A "fill in the blanks"
kind of rote work that pleases those who just want to play in
a sandbox and pretend to be "pioneers advancing the state of
the (merchandising) art." They know NOT of what is behind their
front panels but they take emotional sustenance in feeling the
nice knobs and admiring the glowing digital displays. They
READ of experimentation once in a while in QST, learn the buzz-
words (from the ads therein) and pretend to know state-of-the-
art. Shrug.

>But, somehow they think they can argue this as a "service" to their
>fellow citizens. Krist, the egyptian high priests who held their whole

"Scatalogic" no. Somewhat "erotic," perhaps. Clever word play,
most definitely! :-)

This group is NOT fully fired up on all bands, Jim. Few have the
reading perception to see any sort of humorous word play. A few
of them lean towards the "humerus" side, wanting to break a bone
of anyone talking against them. :-)

Ever fire up that LCie4 package I sent you?

Most of us prefer to use Webster as opposed to that monument of ignorance called Wikopedia. In the United States version of English, a dike is used to hold back water. A dyke is a slang term for lesbian.

Sorry, sir, your lack of both education and street smarts shows.

Webster is wrong.

Dyke is a word with roots coming from holland and surrounding areas
(and not coincidently, they also have a lot of dykes holding back
water--probably the name is indicative of the first man building
one--example, Van Dyke.)

Dike (a greek goddess of justice) is a reference to an ancient
goddess, and its' reference to lesbians sprang from there.

Because american dictionaries got it wrong is a surprise, however you
will find correct references in any decent european/english
dictionary--or a google search.

I'm a tad confuseld here. I thought that the only place where there was
a specific segment that restricted modes was CW on parts of 6 and two
meters, and voice only on the 60 meter allocations.

I thought the rest was bandplan.

branch, I'm.

So, several posts, with typical human error. Is that ignorance of the very language you speak, Dan? Remember how you go off on tirades all the time about my "ignorance" of ham radio. Payback is hell, ain't it?

I'll quit now. I made my point, even though you'll be indignantly opposed to it.

Kim W5TIT :)

No all the other HF bands have some degree of mandated restrictions.
However none of the HF bands have CW only segments. HF does have CW/FSK
only segments that phone, fax, SSTV must stay out of by regulation.

I'm pretty sure you know all this but are just momentarily confused.

To get un-confuseld, (or perhaps more confuseld) ponder &#65533;97.305. Basically it says "(a) you can use CW anywhere", and then a lot of slicing and dicing and segregating and restricting for several pages.

And oh-by-the-way &#65533;97.305(a) is a lie; contrary to "you can use CW anywhere", there are two "bands" where you can't use CW.

John, do you have a technical dissertation on digital transmission of imagery on HF? Not how it can be done, of course. That is a given. But how it can be done practically, as in a reasonable amount of time.

I agree that Len is quick witted. It keeps me reading his posts.

Mike:

"Amateur TV" or SSTV is dead, replaced by much newer technology which, it seems, most hams are ignorant of and have not implemented yet (you can still see SSTV in museums run by private hams--i.e, their "radio shack" and in current use by a few "dinosaur hams.")

The technology is on the shelf, so I take it your real question is, "How come no one has asked/petitioned the FCC to use a "real" video mode on amateur radio yet?"

And, if so, if that is your question, I fail to come up with a good answer--but like I stated earlier, listen to some of the data streams you hear on VHF/UHF/SHF--those sound faster than 300 baud modems, don't you think?

Or, maybe it is just my imagination? Gee, I never thought of it, you don't suppose a some of those are freebanders, do you? <grin>

You do know we are all going to digital TV soon, don't you? I mean digital broadcast TV, surely by then the hams will take the hint, don't you think?

Mike:

Isn't it quite obvious the best method would be the pci shortwave card to receive and feed the signal to a software decoder based in the same computer as the card and feeding the decoded video signal to the video card of the computer for viewing on the monitor? (I have the sw card and am toying with it in my spare time but have a lot on the plate right now, and I am addicted to news groups, instant messaging, irc and webcams <grin>)

And, a transmitter feeding from an digital output from a software modem running on the computer via the sound card to transmit the digitized video?

And, the second best method would be to kludge together an external modem to feed the mic input on a transmitter from a software encoder running on the computer, to broadcast digitized video.

And, on the receiving end, the same or a similar modem being feed from a digital output from the transceiver (dac/adc converter installed between transceiver and computer--or implemented as software using the sound card) to a software decoder running on the computer and feeding the computers video card.

I mean there are several roads which all lead to the same end here. Plus, a person in the industry with access to the parts and facilities should be able to put together a dedicated device...

The one I see in practical use, uses the "kludged modem" dac/adc conversion, it functions well, in well I mean is much superior to SSTV--indeed, it is still in use to this day 15 frames per second of BW video is normal with good signal strength...

I am not a "real hardware person" (my degree in that field is from 1972 and makes me a bit of a "hardware dinosaur" <frown>), I am a hacker (but am able to fool my boss well enough to call me a Sr. Software Engineer in assembly/C++ <grin>) all I did was write the code to interface the modems/sound cards with the kludged hardware, I can tell you about the data compaction and rs-232 communications between the serial port-computer-modem and the decoding of the digital signal from the sound card back to a video signal to feed to the computers video card/monitor...

To put it simply, the way the kludge works is that the "phone line" between the two modems (one on a receiver to grab the "digital video signal" from an output on that receiver, and one on the transmitter to feed the video signal) is just like they work on a phone line, only

you have replaced the phone line with a digital modulated audio signal modulating the rf signal...

The guy who built the adc (analog to digital converter) and dac (digital to analog converter) says there is a better way to do this via the sound card its digital in/out ports and the transceivers--and ditch the hardware modems all together--we worked on this and have it at "proof of concept" stage, however we never get the time to get back together and realize it as fully functional...

To be honest with you, during my whole lifetime I have built a few basic receivers/transmitters and many, many linears and antennas--that is about the extent of my hardware experience. I have been gifted to have family members and friends who have a much greater interest in hardware.

Let me be frank on this one point. I would be slow to put you in contact with any of the young men here running this equip.--they are trusting and would be easy to take advantage of and get into trouble. These amateur news groups have demonstrated the true petty nature of hams and how turning a person in for minor infractions of rules and regulations really gets the old women fired up here and calling for blood! I have been burned by petty hams in the past!

Certainly here there are hardware gurus who can explain all this much better than my capabilities... where are the hams who are using this technology in the "real world?"

I can't believe a "hardware type" hasn't already chimed in here and is already offering block diagrams and schematics on how to build one! Have you insulted all those away?

Surely after this post of mine they will chime in...

Even if you are not a programmer, I think there is probably a way to make windows media player decode/encode the video to a protocol like .asf (broadcast media which is already broadcast over the internet via dialup modems at low fps) or such which would be acceptable to broadcast video over the bandwidths in question at acceptable fps (frames per second)... surely there are enough skilled people here to put together a workable project, aren't there?

Don't be afraid to speak up hardware techies!!! Or, is Len right, you have slaughtered all the "digital youngsters" with your large dinosaur egos?

DeVry is a joke regardless of the type of degree.
If you are seriously considering pursuing a Master's degree, I would only
consider such schools as:

University of Pittsburgh

or

The Pennsylvania State University.

Mike:

No. I don't think you understand anything. But, I think I read you loud and clear. You want to pretend everyone is making fun of poor old ancient hams and they don't deserve it. Get real, they need it alright, they need to wake up.

Get real and quit asking stupid questions. Video broadcasts over the internet are going on all the time--and are of much better quality than SSTV.

Now, all you have to do is replace your phone line with a rf signal and you have the same thing between two stations. Not only should a child realize this is possible, but anyone arguing different should be given a three day mental examination.

No. I know your game far too well mike, you are sneaky and underhanded. You seek to manipulate the less technical savvy into thinking simple things are impossible just because they are NOT happening on ham radio.

The truth is your abusive nature of cheap tricks and manipulative spews of textual attacks have turned off the technically savvy, the youngsters who think in digital signals and they aren't here... we are left with a bunch of ancient know-it-all-hams who can't hit their butts with both hands, huh?

No. Truth is you are reaping just what you have sown, you have resisted change and chased off all the younger minds who would bring change with them, then you sent and tap on ancient brass keys (probably vibroflexs from the 70's in reality) and convince yourselves you are doing a "service", you are doing a service alright, it is called a "snow job!"

Shame on all your silly butts, and you have only yourselves to blame!

I know of only one person who may be able to answer your query,
but he is currently busy stalking Lloyd Davies.
Apparently it is not overly difficult to do since Devry has low
standards for admission. Devry accepts anybody who has the money,
even the mental misfits who have a problem with RMS voltage and
spelling disabilities.

It is interesting that "John Smith" made the same error that Len made
some time ago. Amateur TV and SSTV are not at all the same thing.
For that matter, neither are dead. ATV is quite alive and SSTV is
simply implemented differently, via the use of soundcards.

>Most of us prefer to use Webster as opposed to that monument of ignorance
>called Wikopedia. In the United States version of English, a dike is used
>to hold back water. A dyke is a slang term for lesbian.

Ahem...dragging down my old "Websters" [Webster's New Collegiate
Dictionary, Merriam-Webster 1961], I looked under "dyke." All
it has there for a definition is "variation of 'dike.'"

>Sorry, sir, your lack of both education and street smarts shows.

Well, that's how it goes...:-)

By the way, I've always had two pairs of "dikes/dykes" in my
toolbox since around 1947. Formally those are called "wire
cutters." However, I've not yet encountered anyone in an
electronics lab anywhere that did NOT know what the pronounced
familiar name was... :-)

Oh, yeah, long ago I learned that a threaded-rod fastener
was called a "screw." And its receptacle was a "nut."
In a United States high school physics class I learned that
a "screw" was one of the Basic Machines!

Ooooo...lots of jollies with words! :-)

>from then to now. Sorry, I thought I emailed you back that I thought it was
>really a great thing.

Okay, good on that. Just remember the author. :-)

By the way, LCie4's redeeming feature is the ability to change
any single L or C value at will to see the difference it makes
on filter response...and also to do a Monte Carlo Sensitivity
check with L and C tolerance limits. That will become clear
when anyone builds a filter from the program data.

Sorry it isn't nice and GUI-ey for Windows but that's how it
goes with us lazy technical types. :-)

>Poor Lennie the loser, being such a historian on military and all, just
>can't get that E5 Chevron arrangement right yet.

What I described for U.S. Army NCO sleeve insignia was perfectly
correct for the U.S. Army of the 1950s. The E-5 sleeve insignia
was equivalent to a Staff Sergeant of WW2 times and "Staff Sergeant"
came back some time after 1956 and remains. Since I wore that
insignia, was entitled to it, and had my pictures taken (by
different Signal Corps photographers and reviewed by Army PR
folks, that is just how it was then. There was NO "buck
sergeant" (three stripes, no rockers) in the Army at that time.

Note: This has NOTHING to do with amateur radio policy except
that one PCTA extra is so damn fucked up in his mind he has to
make an issue of "military minutae." Too much Billy Beer on a
Saturday night will do that to a moron...

>All this radio experience is as a what ? Operator? Gee Lennie, how hard is
>it to push the button and yap into a mic? Or maybe it was you were a fixer
>eh? I've seen the Army Tech Manuals, What was your echolon me boy?
>Field perhaps? Not even allowed to change a component, other than a tube.
>Hope your TV-7/U tester was in top notch shape.

I'm not going to repeat what I've already stated in here. If you
wish to see what was done, go to:

http://kauko.hallikainen.org/history/equipment/

and click on any blue link under "Stations" heading. Each is about
10 MB
in size, PDF.

In FIXED STATION operations and maintenance, a "tube tester" is
seldom used. One depends on the meter readings and tuning
response during QSYs (frequent for long-haul HF circuits) in
addition to the TM's statements on what should be within range.
For the GE microwave radio relay terminals (having 360+ tubes
per terminal), test point probing with a Tektronix oscilloscope
(511AD model) would reveal whether or not a particular tube
stage was beginning to misbehave. The General Electric terminals
were commercial units and we all used the commercial manuals (you
can see one I am holding in the referenced link). The Western
Electric LD-T2 HF 4 KW PEP SSB was also a commercial model and
all used the WE commercial manuals for it; five of those at
station ADA by 1956. The Press Wireless PW-15 (15 KW CW on HF)

was also commercial. The 40 KW Linear Amplifiers were labeled as AN/FRT-22 but were Collins Radio commercial transmitters capable of 50 KW CW HF output. Like the microwave terminals, a metal nameplate said they were "military" but, other than that, they were identical to the commercial model. The rest of the transmitters were standard "AN" types, a pre-WW2 design, as were the FSK exciters for all the RTTY RF sources for single-channel RTTY circuits. The VHF/UHF radio relay sets used at the old site of ADA at Tsukishima used receiving type tubes (except for the finals, an 829B, in the AN/TRC-1s) but a "tube tester" wasn't used for any maintenance...they were simply left ON all the time as "hot backups" in case the old site's cable input failed.

As to "echelon" of maintenance, any FIXED COMMUNICATIONS site is about as close to "depot" level as any can get. When the mission is to operate 24/7, one fixes malfunctions when they occur. NOW. That was very seldom. Fixed station equipment is designed and built for continuous operation...and it worked that way. At the Camp Owada receiving site it was the same, R-388 and R-390 receivers (Collins Radio) with assorted multicouplers and SSB demodulators, all working around the clock. The torn-tape TTY relay was 220 (approximately) Teletype Corp. machines, olive-drab or black painted versions of civilian Teletype machines. All at 60 WPM equivalent rate. Not one single manual telegraph key used anywhere at station ADA in the 1950s...not even in other-unit message centers. The small MARS station was NOT a part of my Signal Battalion and their only choice for transmitting (third priority) on long-haul HF was through a TTY circuit to transmitters and one from receivers.

For operations as Provisional Infantry (should the need arise) we had the AN/PRC-6 handie-talkie (single frequency low-VHF FM push-to-talk) and the AN/PRC-10 walkie-talkie (variable frequency low-VHF FM voice, with internal crystal calibrator, frequency range compatible with PRC-6); push-to-talk H-33 handset. Everything was workable on the march, nobody sat down in the shade and tapped out morse code to communicate. The four-knob AN/PRC-25 (also push-to-talk FM voice) of early Vietnam War era was yet to be designed and built in 1956.

>Does the MOS 31V mean anything to you ?

Nothing at all...and that extends to the U.S. Army.

In checking out MOSs at www.goarmy.com and looking under "jobs," there aren't any Thirty-One-Victors listed. To make certain,
I went to the Fort Gordon site and searched under the MOS Signal School classes. There were other Thirty-Ones listed by none for Victor suffix. Fort Gordon, GA, is the Signal Center, and the

controlling base for all Army communications/computer classes.

If a Thirty-One-Victor was your MOS, consider your job skills as DEFUNCT. The Vietnam War ended 30 years ago. Best to adjust for it. The Army has gone on with the soldiering task and uses new style equipment*...unlike so many of the amateur extras content with remaining fixed in several-decades old standards and practices. Defunct. Gone. Went bye-bye. So long...to 31V.

This Sunday morning I hope you are not too hung over after all that drinking. I hope you didn't puke on your Kode Klucks Klan sheet even though it still smells bad. Take two aspirin and go play with your code key.

LenAnderson@ieee.org

* Standard small-unit land forces radio is the SINCGARS family (30-88 MHz, voice or data, in-clear or encrypted, single-channel frequency or frequency-hopping). Manpack unit is AN/PRC-119; several variants for power output using same R/T for vehicular use plus an airborne model. For HF voice or data there is the AN/PRC-104 manpack (includes automatic whip antenna tuner) with any frequency selectable through internal frequency synthesizer. Vehicular variations of same R/T with power amps up to 400 W PEP. The first of the SINCGARS became operational in 1989, the PRC-104 family about 1986. The PRC-119 has undergone the SIP or SINCGARS Improvement Plan at ITT Fort Wayne, IN, resulting in a halving of weight and size. The PRC-104 is coming to a close of its life soon but there are several candidate sets under evaluation to take its place. Both have been "tested in battle" in Iraq, Afghanistan, Somalia, and the various parts of old Yugoslavia..

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!

Spoken like a true Mental Midget.
Buy a Brillo pad and scrape the smegma from your overbite, Wiseman.

And while you are out and about, is there a Wal Mart in your area? Get you
to the store and buy a keyboard with the keys in the right place.
That is, after all, your excuse for your hundreds of "typos", is it not? And
after you get your new keyboard, be sure to lock it away lest Lloyd sneak
into your house and switch the keys around again. Oh, wait. You can't lock
it in your safe because Lloyd knows where your safe is and even knows the
combination.
You know how Lloyd is Wogie. He is everywhere. He's hiding in the bushes
across the street, he's sitting in the parked car two houses away, he's
listening to your phone calls and, heck, he's even in that Piper Cub flying
over your house on weekends.
Lloyd seems to be omnipresent in your life, doesn't he? Without Lloyd you
would have little reason to be. Your life would be meaningless without the
seemingly omniscient Lloyd controlling your Lithium addled brain, wouldn't
it? Without Lloyd in your shallow life you would cease to be. Zilch. Zero.
No Lloyd, no Roger Wiseman.

Oh, excuse me. In your fantasy world everybody is Lloyd be they real or
imagined.
You should again don your tin foil hat, Roger. That way Lloyd won't be able
to read your thoughts, insane as they are. Trouble with that darned tin foil
hat is that it causes your single brain wave to bounce around and collide
with itself as it seeks release, and that is the cause of your penchant for
foul language.

Saran Wrap, Roger. Saran Wrap. It works better. Place it over your head,
tape it tightly around your neck and say goodbye.

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!

Why would you let the ARRL stand in the way of your getting a ham
license? That's a pretty weak excuse, you don't have to have a single
thing to do with the ARRL as a ham.

There was a comedian (a Brit, I believe) that had a routine called "clean and dirty" that went something like this:

Hen is a clean, cock is a dirty;
Bolt is a clean, screw is a dirty;
Cat is a clean....

and he could actually go on for about ten minutes ... it was a very good schtick.

As I recall, George Carlin did a takeoff on this, but I can't remember the details.

This is a link to the IARU HF bandplans:-

http://www.iaru-region2.org/hf_e.htm

This has all three regions on it, although published on the Region 2 web site, so probably most up to date for that region (the one the US happens to be in).

If we had a voluntary system in the US, as per most other countries, this is the bandplan I would go by. OTOH, the ARRL bandplan necessarily incorporates the current restrictions on phone. They might change it, or might not, but then I am not a member...

For those who haven't followed the link, the phone segments for R2 start at 1840, 3635, 7050, 14112, 18110.5, 21150.5, 24930.5 and 28225. In fact, phone is allowed somewhat lower down on a non-interference basis, but if you want that info you'll have to actually read the thing!

This is because the US hams have to transmit in the BC band. If the US hams
could transmit outside the broadcast frequencies this wouldn't continue.
The DX works split so that their sigs aren't covered by BC QRM.

> If the rules are changed so that you can call the DX on their

> the DX will probably still work split.

They will if there are still broadcasters in 7150-7200, which there may
well be.

OTOH, if we had voluntary bandplanning, the IARU recommends that region 2
phone ops stay above 7050, which gives us 7050-7100 that is not in the BC
band, versus 7100-7200 where they may still be left over broadcasters.

I don't think the lack of this behaviour on CW has much to do with pure motives, but nore to do with a lack of audience.

It makes a nice statistic to hang your hat on, but the since such antics are most readily "detectable" on voice you could make the same claim for >any< mode other than voice.

I'm not certain that Jim means to do so, but the cumulative weight of his postings on the subject sends this message:

"CW operations are allowed on all frequencies without restriction because CW operators can be trusted to do the right thing.
SSB/AM/RTTY/AX.25/PSK-xx/AMTOR/PACTOR/SSTV operators can not be trusted, so their kind must not be allowed a similar freedom to cooperatively select operating frequencies."

Worldwide evidence flies in the face of this lack of trust.

So what, just because you may not agree with everyone who goes to movies, does that stop you from going to movies? What made you think you had to pay any attention to those "loyal members". What do you care who has the biggest antennas or what brand of radio some other ham uses? I think it is all just a weak excuse about something you didn't want to put any effort into.

Subject: Important Organizational Announcement

ARRA Founder Glen Baxter cuts a deal with Washington

Belgrade Lks, Maine., July 1, 2005 - In a surprise deal, ARRA Founder K1MAN and FCC legal representatives at Dewey, Cheatum, & Howe, announced today that all charges and NAL pending against K1MAN would be dropped contingent on a merger agreement between ARRA and ARRL. Under the proposed arrangement, ARRL would acquire the American Amateur Radio Association (ARRA), a leading provider of Amateur Information Bulletin Services. The deal would unite the two most prominent Amateur Radio organizations in the United States. Financial terms of the proposed acquisition have not been finalized.

"The acquisition of ARRA complements ARRL's already extensive offerings to include up-to-the-minute information and interactive discussion on what is happening in the world of Amateur Radio," said Jim Haynie, W5JBP, president of ARRL. "Together, we will be more effective in taking on some of the challenges facing Amateur Radio, such as BPL and Spectrum Defense. This brings us one step closer to being the national membership association for Amateur Radio operators."

The acquisition also brings the strong leadership skills of Glenn Baxter, K1MAN, to the ARRL organization. Baxter has been named ARRL Third Vice President in the move. "Mr. Baxter is a welcome addition to our management team here at ARRL," said David Sumner, K1ZZ, and ARRL Chief Executive Officer. "I look forward to his fresh perspectives and enthusiastic approach to running a service organization like the ARRL."

"Water under the bridge," said Glenn Baxter of ARRA about past frictions between the two organizations. "Today marks a new beginning for all of us. We're in this together now." Plans for collocating Mr. Baxter and Mr. Sumner in adjoining offices at ARRL headquarters are currently underway.

In an official statement, Mr. Riley Hollingsworth, K4ZDH, FCC Legal Advisor for Enforcement added, "Over the years, Glenn and I have become very close. I look forward to continuing our professional relationship as he assumes his new position."

In an effort to accelerate the shift to its new on-the-air image, ARRL has already filed the paperwork necessary to make W1MAN the official call sign of the combined organization. Joe Carcia, NJ1Q, ARRL station manager was thrilled with the change, saying, "What a creative way to reflect our traditional roots while also letting our bold, new face shine through!"

Broadcast operations at the facilities of ex-W1AW will be shutdown immediately. ARRA's state-of-the-art studios in Belgrade Lakes, ME will become the new source of all ARRL transmissions.

Amateur Radio insiders applauded the move. "These are interesting times for Amateur Radio," said Gordon West, WB6NOA. "I sense a likely shift in the ARRL views on many areas of the service. I think we'll be feeling the positive impact of this merger for years to come."

"This is big . . . really big," said Joe Walsh, WB6ACU, lead guitar player for the Eagles. It's exactly the kind of thing that will send our ticket sales through the roof. With Glenn on vocals, and Sumner on drums . . . this tour season will be our best since '73"

Audio aficionado and Amateur Radio entrepreneur Bob Heil, K9EID, also supported the move. "This is a good thing for Heil, and it's about time these guys got together", said Mr. Heil. "We are already working on a special commemorative W1MAN microphone to honor the event."

ARRL was founded in May 1914 by Percy Maxim, a leading Hartford, Connecticut, inventor and industrialist. Today ARRL, with approximately 152,000 members, is the largest not-for-profit organization of radio amateurs in the United States.

What's your problem?

I've never had a need for morse code, but I took the tests.

Got the GROL at the same time I passed the Advanced and Extra writtens.
Didn't do so hot on the morse code tests back when I was actually
interested.

Why would I care about the ARRL? I am not a ham and the ARRL is one reason I never bothered with ham radio. I went into broadcast and electronic manufacturing instead. If the people I have kill filed are the best example of ham radio, it can die for all I care. As far as the cemetery, I don't have that many years left so I will kill file whatever reprobate I have to, to enjoy them in peace.

One thing is obvious. You have no manners, and no social skills.

But the Region 2 DX could work transceive on 40. Yet they don't.

> If the US hams
> could transmit outside the broadcast frequencies this wouldn't > continue.
> The DX works split so that their sigs aren't covered by BC QRM.

On 40, maybe. But what about the other bands? There's no BC QRM on 20,
for example, yet the DX often works split there.

Not for long! The broadcasters are moving out of 7100-7200. The whole
world will soon have 7000-7200 as exclusively amateur spectrum. Yet the
use of split will continue, as it does on other bands.
>
> OTOH, if we had voluntary bandplanning, the IARU recommends

But whose bandplan do we follow, if they differ? ARRL's? IARU's?
RSGB's?

What about bandplans that don't agree with license privileges? For
example, Novice/TechPlus HF privs on 40 are 7100-7150 - CW only! Does
the "think tank" proposal address that?

> I don't think the lack of this behaviour on CW has much to do
> with pure motives, but nore to do with a lack of audience.

Why?

I've been a ham 38 years come October, and spent most of my time on the
air working CW. In all that time I've heard *nothing* that wasn't
"G-rated" or embarrassing to the amateur radio service. *Nothing*.

Yet in far less time, I can hear stuff on 'phone that causes me to spin
the dial to get away from it.

There's no shortage of audience on CW. The last Morse-code rated NAL
(the first in many years) was for a guy broadcasting "code practice" on
40 meters 24/7. The violation wasn't for the content of his
transmissions, nor for the one-way nature of the transmissions. It was
for failure to adequately reply to FCC, and the obvious lack of the
required station control.

Now look at some of the NALs for 'phone operation.

The 40M phone DX in region 2 more often than not works split anyway
even though it's legal for them to transceive. They do it simply to
keep themselves from getting buried under their own pileups. The "DX
windows" on 75 and 20 phone are both well within the U.S.phone bands
but the DX still habitually listens up for for calls from both U.S. and
other DX for the same reason. Including the DX in the other regions.

It also works the other way around. Given the choice U.S. dxers
generally prefer working split so that they can hear the DX below the
hordes calling him/her. This is particularly true on 160/75/40 where
the DX is often down near the noise level. And I can't count the number
of new ones I've logged with split CW by "transmitting up".

> This is because the US hams have to transmit in the BC band.

That isn't correct. U.S. hams are transmitting on the 40m amateur band.
Europeans and other DX are *listening* for the U.S. SSB ops on a BC band.

If the US hams
> could transmit outside the broadcast frequencies this wouldn't continue.
> The DX works split so that their sigs aren't covered by BC QRM.

That isn't necessarily correct. The sharp, rare ops are operating split
on *any* band if the pileup is huge. That keeps the callers from
covering his sigs.

>>If the rules are changed so that you can call the DX on their
>>frequency, they may still decide to work split.
>>
>>7100-7200 will become worldwide exclusive amateur in a few years. Some

So, hams using SSB act up because they think they'll be likely to have a
non-ham audience? That doesn't compute.

Good posting, John, you've synopsized what most of the silent readers have already surmised about these Ancient Radio Astronauts that no one was in search of. Coslo "wants" a super-simple explanation so that he and other Titled, federally authorized amateurs can look down on others while holding up their super-special morse keys, gloating in triumph of "achievement." I will fill in a few blanks (or rather, blank stares) for the morsemen...

For "education" on information compression, there is Claude Shannon's 1947 paper that explained the basic laws. The rest of the radio world gave it a peer review and accepted it en toto. The full paper is archived at the University of Illinois website and may be elsewhere. "Shannon's Law" has been given in so many communications textbooks of the last half century that it is a major months' work just to do a bibliography. It is universal, it is accepted. The many pages on statistics involved aren't necessary to fully understand the concept (thousands of others have already gone through them with critical fine-teeth combs and passed it). "Shannon's Law" relates Rate-Bandwidth-Noise-Error in as elegant a form as possible. It is absolute. It is the Touchstone, the Bedrock in communications. ALL communications, NO exceptions.

Once the basic relationship is accepted, the student can then turn to information reduction-compression, especially in the high redundancy of human speech-symbolism-utterance-imagery. The SECOND version of "morse code" (the one including letters and some punctuation, the first one was only numbers) owes much to even earlier manual type setters. In English the letter E is the most frequently used one, so type setters arranged their type case/holders with the E slugs at easy reach. Alfred Vail, Morse's financial angel, saw that and suggested it to Morse. In that way morse code's letter E is the shortest possible data information bit, a single "dit." The other letters followed - roughly - the type setters' arrangements, less-used

letters having longer time completions. Punctuations are given long time sequence completions, occurring less often than letters. Numbers are of approximate same length, apparently in a hold-over of Morse's first code scheme (unknown, that is really arbitrary except to those who just want to argue angels on heads of pins busy-work). The end result was a rather complex sequence of short-long-interval time-related BITS to represent the major components of the ENGLISH language, native to Morse and Vail and most everyone in their 'hood.

Enter the Morse-Vail Telegraph System, now patented, in 1844. Primitive in electrical terms but vastly faster than message transport by horseback and something that will work through visual obscuration (as in the European visual semaphores). The heart of the Morse-Vail Telegraph is the RELAY, all else is secondary. By replacing the ink pen of the first telegraph "receiver" with a solenoid-activated key/switch, a whole new circuit can be created to EXTEND THE LENGTH of the original one, this time with another battery (very primitive in 1844) that could extend the whole telegraph path fourfold then... for the equivalent of "positive copy" using more modern terms. This worked remarkably well for its time, was reasonably economical then, and the ink pen traces could be "read" with very little training by unfamiliar "operators." Note: All "telegraphers" were required to read-write English (or their native language for foreign adapters of the system) since the "telegarph code" was just a REPRESENTATIVE of the characters of the language.

As the Morse-Vail Telegraph system spread (remarkably for its time), the ink pen tracings were replaced by acoustic "sounders," the same ink pen solenoid arms now striking some semi-resonant device to create audible clicks. Telegraph operators were now required to have good hearing as well as the (rare then) reading-writing pre-knowledge/skill. Each telegraph circuit required a telegrapher at each end, first to transpose the sender's written message into the telegraph symbolism, a second specialist at the receiving end to re-convert dots and dashes to the written language readable by the recipient.

The concept of the RELAY applies to radio by simply replacing the wire lines with the electromagnetic waves of radio, the transmitter controlled by the telegraph key switch, the radio receiver having some sort of acoustic sounder equivalent (nearly always headphones due to lack of amplification). Early radio was exceedingly PRIMITIVE, totally lacking in active amplifying devices such as the vacuum tube triode. Spark-discharge damped-wave-oscillation "transmitters" were their own "BFOs" for primitive "receivers" so that a receiving operator could discern the on from the off by the growl of the spark transmitter. This was stone-age technology hardly different

from the primitive electrical lines of 1844.

Primitive "information compression" had already begun in wireline telegraph systems, everything from short-form numbers for common salutations ("73" for written 'best regards') to five-character groups standing for entire sentences (common in commercial communications such as in the many-edition Bentley's Commercial Code books). With the beginnings of radio (heartily endorsed by the maritime people as something they never had before - over-the-horizon-communications!) came a whole new set of shorthand such as "Q" and "Z" 'codes' standing for whole phrases and sentences. [Q and Z are least-used English language letters, thus would be less confused with English words beginning with those letters]. Information compression had arrived although it was attributed to the "magic" of the telegraph, a misattribute but advantageous to the boosters of the new "technology" of radiotelegraphy.

Lurking off to one side of this new "miracle technology" called radio was the teleprinter. Teleprinting sought to find a direct link from sender to receiver by dispensing with human specialists of telegraphy...for security reasons, for personal reasons, for an increase in communications time (cutting down the transposing and decoding in manual telegraphy). Work on development of teleprinting had already begun in the mid-1800s, hampered more by machining capability and mechanical devices than the primitive electricity of its time...but utilizing character codes each having the SAME length of time. The end of teleprinting experiments showed that was a necessity to permit automatic decoding of teleprinter signals at the receiving end. That equal-time coding can't be grasped intuitively except by comparisons to unequal-time codings such as "morse code" or even the human languages spoken-heard.

Human languages have HIGHLY UNEQUAL lengths of time to convey information. The exact reasons are not fully known but it is a common fact...yet everything from emotions to complex abstract concepts can be communicated by human languages (whether or not the receptor is able to comprehend any of them). It has been suggested that the HIGH REDUNDANCY of human speech (and its written form) is a form of "error detection"...or the ability to "work through QRM or QRN in more modern radio terms." The end result is that spoken and written languages take a lot of time just to communicate. This is a sidelight to information coding, applicable but not a prime example of it.

Teleprinter equal-time-per-character encoding/decoding has definite advantages for separating communications from noise. Noise is random. Signals are repetitive. Machines and circuits can separate the two logically. In addition, the equal-time-per-character timing allows actual noise-distortion-CORRECTION by logic circuits, either in-line or off-line. No long-time

multiply-redundant information transfer is required. Such can be done by mere doubling of teleprinter character code times to include parity error-detection and correction bits. While teleprinting is also a representation of a written language, the SAME shorthand that was applied to "morse code" can be applied to teleprinting.

Note: There is much "noise" (largely QRM, not QRN) from manual telegraphers in the form of myths and "magics" of telegraphy that obscured the advantages of teleprinting. This derived, perhaps, because telegraphy (simpler in technology) came first and thus had a chance to establish its PR basis. Another, more subtle, was that the speed, security, and relative economy of teleprinting caused business, commerce, and governments to eventually displace manual telegraphy with teleprinting. All of those "downsized" manual telegraphers were lacking a trade to ply their specialized skills. "Radio" appeared just in time to rescue many of those manual telegraphers, give them new jobs. By the 1930s teleprinting was the mainstay of written communications worldwide...despite the insistance of manual telegraphers that this was not so and thus generating so much man-made QRM. Teleprinters could operate for hours on end at equivalent 60 WPM rates then, needing no breaks for sleep, ingestion of food, or elimination of wastes...just feed them paper and ink ribbons, oil them once in a while, and they can run 24/7 if needs be.

Segue to 1915, AT&T, the first vacuum tubes, and the first real "radio." John Carson of AT&T showed his mathematical equations describing the spectral contents of the three basic carrier wave modulations: Amplitude, Frequency, and Phase. Amplitude modulation is doubly redundant in the spectrum (but does not need to remain that way to convey information). One modulation sideband could be eliminated without losing any information! AT&T applied that to wired long-distance lines to create the first use of "single sideband." Primitive information compression but yet true information compression (of an analog kind).

Advance to 1948, keep AT&T in the picture, add hundreds of researchers on Information Theory (sparked by Shannon's Law) and cryptology and the basics of logic circuits (using tubes as Athanasof's Ohio State U. first computer did) and Information Theory spreads in a mushroom of megatons of new capabilities. Bell Labs announces the birth of the transistor, the new messiah for all electronics. In the next two decades the "modem" is born...first at a relative snail's pace of 300 WPM equivalent...then 1200 WPM...then on to 2400 WPM...until finally beginning to nudge the limit of Shannon's Law at a rate equal to 56,000 Words Per Minute! [five 10-bit ASCII characters plus an equal time space make up a "word" here]

Recall that basic AM was described in 1915. But, a common plain old telephone line has a bandwidth of only about 3 KHz (slightly more but it drops off rapidly after 3 KHz). Sending 56 THOUSAND anythings per second is "impossible?" No, it is established fact and nearly everyone in here does that every time they log onto an ISP. What a 56K modem does is to COMBINE both AM and PM in a digital way, add a soupcon of Information Coding in an elegant way in silicon hardware and voila(!) a seeming "impossibility" is proven fact. No "magic." Just clever (I'd say Machiavellian) innovations on using already proven laws to accomplish this "impossibility."

A 56K modem principle of operation is NOT intuitive...except maybe to an electronic genius (I am not such). It requires familiarity with many different areas of existing technology that are not classical "radio" (that being old-time analog only circuitry of the 1930s-1940s). The only impossibility is trying to describe How It Works in a short message; it isn't possible in a long message, even with binaries allowed (not allowed in this newsgroup). Yet it WORKS. Daily. By the hundreds of thousands worldwide every minute. The technical details are Out There for those that wish to study it.

Immediately the key-banging beepers will shout "that isn't ham radio!" It is definitely NOT the "ham radio" of the 1930s. Ham radio of then didn't have RTTY nets, let alone "computers" of today to arrange QSOs via the Internet. :-) But, the PRINCIPLE of Information Coding/Theory applies and the 56K modem is a ubiquitous example of today. SCALING of RATE does apply in any Information Coding/Theory. One can go lower in rate, keep the bandwidths narrow as the minds of those stuck in 1930s technology. Look at PSK31.

PSK31 was devised/innovated/elegantly-conceived by Peter Martinez, G3PLX. It is capable of 30 WPM sustained rate equivalent in a narrowband space no wider than that used by a manual radiotelegraph circuit. Teleprinting. The modem is in hardware-software, not the operator's wetware. Martinez displayed a willingness to experiment, to try out the new, to innovate, as he did three decades before using the polyphase network to generate SSB (in Radio Communications magazine of 1973, I have copies of that). SCALING of rate and some clever adaptations of Coding Theory did the trick. It works. But, it took a LONG time to appear over on this side of the Pond. Hams in Yurp tried it out first. Ham-wise, the much-ballyhooed "Yankee Ingenuity" was nowhere to be found...nor the courage to TRY...all were too busy talking of their "radiosport" scores and certificate awards (suitable for framing) and telling tall tales of their "pioneering the radio arts" (by others done much earlier). American ethos (and mythos) were all centered around manual morsemanship.

Why would (as Coslonaut and Flint) anyone WANT to send
a half-Gigabyte streaming DVD data on HF?!?!? Ridiculous.
But...what CAN be done in the narrowbanded, marrowminded
playground of HF is DATA of many kinds. "PicturePhone"
video, perhaps, slow-speed imagery so that everyone can sit
around their ham shacks and admire each others' radio gear?
Can be done in the spectralspace of a SSB phone signal.

Digital Radio Mondial is now broadcast on HF from Europe and
Asia in over two dozen programs each day. It is digital on
HF, can be digital on LF, MF, and VHF, all without taking
more spectral space than an AM broadcast. It works, despite
the ignorant protestations of narrowbanded narrowminded
amateurs emphasizing the glory and nobility of morsemanship
"working through when nothing else will" in usual brags.

A possibility of what can be done is 1200 Baud (1200 WPM)
data streamed through a bandwidth of 250 Hz using a combo
of amplitude and phase modulation...the equivalent modem
being the RF source. Perhaps 2400 WPM in a 500 Hz BW, either
data rate faster than what is normally done now on HF and,
by experience, quite fast enough for BBS downloading and
message handling. It could make the ballyhooed "NTS" a
force equal to its overblown reputation. Such will not be
accepted by the narrowband, narrowminded crowd who will
demand seeing the Blessing of the league first, then ads in
QST featuring peripherals at a given price, before believing
it is possible. Even then they would not understand anything
but the ads in QST.

>Now, all you have to do is replace your phone line with a rf signal
>and you have the same thing between two stations. Not only should a
>child realize this is possible, but anyone arguing different should be
>given a three day mental examination.

The very first radios did exactly that to wired telegraph
systems. The vaunted ARRL started that way...actually doing
the equivalent of hacking commercial telegraph systems (one
has to read the ENTIRE league history in order to find that
gem but it is there). But, radio amateurs STOPPED there and
very few went further. The league did much the same.

>No. I know your game far too well mike, you are sneaky and
>underhanded. You seek to manipulate the less technical savvy into
>thinking simple things are impossible just because they are NOT
>happening on ham radio.

The olde-fahrts (chronological or mindset) are the ultimate
hobbyist conservatives. Anything new/revolutionary must meet
some kind of "test in battle" to "prove its worth." [and,
of course, have such product ads in QST as double proof]

>No. Truth is you are reaping just what you have sown, you have
>resisted change and chased off all the younger minds who would bring
>change with them, then you sent and tap on ancient brass keys
>(probably vibroflexs from the 70's in reality) and convince yourselves
>you are doing a "service", you are doing a service alright, it is
>called a "snow job!"

But...But...they have "qualified" by federal test! :-)

They are federally authorized to turn their mighty stations' HF carriers ON and OFF in that epitome of all communications modes, morse code! And READ the same signals without anything but a simple receiver! Deus ex machina meets state-of-the-art!

They have TITLES! [certificates suitable for framing to amaze their family, friends, and neighbors] Morsemen are the TOP Grade! They have reached the ULTIMATE in upgrading!

They are AMATEURS, far greater and far better than any evil (hock a loogie to them) professionals in radio! They must be because they say they are...! :-)

Correct. SSTV is hardly TV at all, being still images. And ATV is
indeed the transmission of moving images, and there is a very good
reason that it is at UHF frequencies.

It was all their loyal members who put me off amateur radio. I quickly tired of their bickering, and pissing contests over who spent the most on their station, who had the biggest antenna farm, and which brand of radio was the only one fit to be used on the air. I wanted to design and build high end receivers in the microwave range, then I got drafted and never considered a ticket again. I was awarded broadcast engineer as a civilian acquired skill while in basic training, and had enough hours keeping multiple transmitters on the air, along with two studios. Amateur radio had lost its appeal for me. I am still interested in receivers, but I don't have much time to work on them, and the hurricanes last year destroyed most of my test equipment. So, I'll have to see if I can afford to replace the equipment, repair the benches and put a new roof on the shop before I can do any serious work again. I am 100% disabled and can't climb a ladder, so I'll have to wait till i can afford to hire someone to do it for me.

That is bizarre.

The way it really works... (well, in the real world--probably NOT amateur radio <grin>)

You read the bytes from the ccd camera at 30 fps (or 10, or 20, or whatever)

Process this digital data as you please, format, snip, enhance, etc--compress/encrypt and send the bytes (8, 16, or 32+ bit words) at the fps you would like, but equal to or less than the fps read from the ccd cam and in sync with what the receiver expects or can handle.

At the receiving end, you uncompress the bytes and send them to the video card.

You watch the picture on the monitor.

... end of story ...

You would really have to work at it to make it harder than that, or lack sufficient understanding.

The ops at KPH/KSM are all either former station ops from there or experienced shipboard radio operators, all holding Radiotelegraph Operator Second or First Class Certificates. The "wheel" (VVV tapes) will of course be used until traffic is to be passed.

If and when they switch to K6KPH on the ham bands (using drastically-lowered transmitter power - 1.5 KW rather than the 15 KW that those transmitters were built to deliver) the ops - same guys and ladies - will be those who also hold FCC Radio Amateur licenses.

They will have no problem with sending clean Morse.

If you don't want others to respond to your comments in this very public
forum, you might want to have a lengthy e-mail exchange session with "John".

Maybe you can get those counted toward your fantasy "Extra right out of
the box".

> Has Dannie ever taken any COLLEGE LEVEL ENGINEERING COURSES?
> And the TESTS that go with those? I have. Passed them, too.

That's just super, Len--unless the object is an amateur radio license.

> Actually, I've "passed" the most stringent TEST of all...using

That's neat, Leonard. You've been employed. Me too! Did you know that the percentage of Americans who have been employed is much larger than the percentage of those who pass an amateur radio exam at any level? It looks like just about anybody can become employed.

"Treachery, experience and a hundred watts beats a nitwit with two
gallons every time."

> It'll happen whether broadcasters are there or not.

Has been for decades. Now that SWBC biz is fading a bit and they're
moving out of the band working split actually makes even more sense.

It occurs to me that an argument could be presented about what us dxers
do on 40 phone as a matter of standard operating practices is not the
point the way Alun views the matter. Alun isn't interested in dxing
which is OK, all he wants to do is go peacfully ragchewing with, say,
one of his G-land chums. Who is calling CQ on 7.090 and there isn't a
pileup in sight. Alun can't get the guy's attention because the guy
isn't listening up the band for statesiders so Alun climbs into this
venue and mumbles, whines, groans and bitches about not being able to
chat with the G because po' Alun is stuck in bloody U.S. phone band and
can't xcv with his chum.

Does not flush. Go back a few years ago in the timeframe when I had the
Big Wire fed by my silly little TS-50 HF mobile xcvr which I had up and
running for the 40M RRAP CW Net exercise. The hoot to end all hoots.

I digress as usual. I happened to hear an EI8 with a decent SSB sig
yakking close to 7.100 with some station who was too weak for me to
copy. I set his freq on VFO A then fished around the band above 7.150
for a reasonably clear freq with VFO B and found one around 7.235 as I
recall. Paddled out a quick "QSX 7235 de W3RV? K" on his freq. "W3RV
stand by" with a brouge ya could cut with a knife. Which I did and
switched the TS-50 to LSB split and sat back while he finished with the
weak Euro and called me. Turned out to be a very enjoyable one hour
ragchew.

As if there's anything new about any of it. How many times David . . .
?

That's surely no worse than your stubborn, hidebound efforts to change regulations in something in which you are not remotely involved. Try a mind meld on that, old timer

What is any of this to you? You aren't a part of amateur radio. You've made no effort to become a radio amateur. You're simply some geezer sitting on the sidelines and shouting, "You're doing it all wrong". You've become a regular Rodney Dangerfield--except that you aren't intentionally funny.

It sure does. Ten-Tec's has marketed a pretty nice general coverage receiver which incorporates Radio Mondial capability for several years. It requires a PC to work. That pretty well eliminates portability. Radio Mondial isn't going to be something which catches on in the third

world where price, battery power and portability are prime requirements.
I think it is likely to be accepted in the U.S. about as much as AM
stereo and 8-track tapes.

> A few years ago in here a bunch of narrowband, narrowthinker
> olde-fahrts exclaimed and exclaimed that "it won't work!"

They did? Name them.

> The general idea of DRM, scaled for 2.5 KHz voice-only audio
> bandwidths is eminently possible on HF.

Sure it is. The problem is, what works well for many people tuning into
a broadcast just falls apart when a number of people call one station or
when a group of stations desires to converse roundtable-style.

Len:

I finally figured out why they truly hate you here!

You have made a statement that cw is ridiculous and protested by never getting an amateur license--now there are tens of thousands or even hundreds of thousands who have joined you--I see them everyday--they refuse to get a license because of the code...

... that is why they hate you, you were a man before your time my friend! And, your protest is being voiced by a strong majority today.

John

No, and I really admired some of the work that was on that site. Especially the one about the explosion of 2-meters.

Whatever, took a whole two minutes Alun. I would not like to operate in
that regime. In the first place it's far too complicated, much more
complicated than the ARRL plan, complexity being an auto-turnoff bound
to get busted right and left in practice. Second it's sorely out of
date with it's "allocation" for ax.25 ops. How much packet to we hear
any longer on 40?? Further where do the modern digital modes like
PSK-31 fit into this plan? They're not even mentioned. Ditto the
looming opening of 7100-7200 in regions 1 and 3. Looks like the thing
was laid out 20 years ago, it's an artifact.

My big squawk with it though is that the top end of the CW-exclusive
segemnt is 7.035. That's just plain nuts, only allows 10 Khz for U.S.
non-Extras to operaste phone-free which simply will not work.
Particularly given the ongoing surge of 40M QRP CW ops by all classes
of HF-enabled licensees in all regions.

In a word fuhgeddit.

I suppose they're all "digimode".

> Ditto the

Bingo! So much for "dynamic reallocation of resources"..

And that's if everybody plays by the bandplan!

Alun says the 'phone segment starts at 7050 under that plan. Which means that 'phone is primary on ~83% of the band! CW is primary on ~11%. The "digimodes" are stuck in between.

The spectrum-efficient modes are sacrificed to the spectrum-wasters. "From each according to his [spectrum] ability, to each according to his [spectrum] need...." where have we heard that before?

> Particularly given the ongoing surge of 40M QRP CW ops by all
> classes of HF-enabled licensees in all regions.

7040...
>
> In a word fuhgeddit.
>
The 800 pound problem is that nobody sez whose bandplan is to be followed. Does IARU outrank ARRL in the USA, or the other way around? What if NCVEC, NCI, RSGB, CQ or qrz.com comes up with a bandplan of their own?

Like you said - fugedaboudit.

Who is "they", John?

I don't hate anybody on rrap. I like some more than others but
"hate" is too strong a word.

The problem you, Len and a few others share is simple:

You have confused the destination with the journey.

Literally billions and billions of people worldwide have joined Len in protest
by never applying for an amateur license --- untold billions!
Literally billions and billions of people worldwide do not have CB sets!
Literally billions and billions of people worldwide do not have FRS sets!
Literally billions and billions of people worldwide do not have GMRS sets!
Literally billions and billions of people worldwide do not have MURS sets!
Literally billions and billions of people worldwide do not have marine VHF sets!
Literally billions and billions of people worldwide do not have cordless phones!
Literally billions and billions of people worldwide do not have any sort of
"wireless" communications!

What an impressive protest, people before their time!

Nope, there will be no carrying of Robeson's baggage. His baggage is his own, and if it's too overwhelming for him to carry, that's of his own making. Even the females have to carry their own baggage in the service. Suggest Robeson toughen up a little and do the same, if he's up to it. And quit his whining.

How'd we get to DRM for voice? Weren't we talking about images and
video? A bit of difference there maybe?

>> A few years ago in here a bunch of narrowband, narrowthinker
>> olde-fahrts exclaimed and exclaimed that "it won't work!"

> They did? Name them.

Probably because someone made some claim that was a bit beyond
capabilities, and then clever people shifted the argument, just like
what is going on here. So now we have some of us being Luddites
regarding digital image transmission on HF because of DRM FM-like audio.

Which would be scaled down to that 2.5 KHz bandwidth.

How we be gonna scale those pictures and live video to fit into 2.5 KHz?

>> The general idea of DRM, scaled for 2.5 KHz voice-only audio

Of course.

>

> with a pass to enter the park.

Okay, so it looks like someone is now trying to shift the argument into
something like we have to fight to get more spectrum so that we can use
methods that use more bandwidth.

I thought that we were going to be able to send live video and digital
images on HF?

Simply by hooking our computers to our rigs via the proper interfaces.

Now it seems that the *idea* is that we are going to use DRM, and we're
going to need to get more spectrum in which to use.

IOW, it can't be done (practically) under the present circumstances.

Some of the other folks who would have to give up their spectrum might
have something to say about it also! 8^)

Is analog simpler than digital?

Does having a computer that attaches to the Internet make a person a
digital expert?

I ask for enlightenment, I get invective. Appears to be what there is to offer.

You missed a lot more than Brain lets on.

I could do exactly what HE does and extract single words from
posts and make it sound ominous, too.

But there's a difference...

Brian P Burke is a chronic and deceitful liar....He NEEDS to
manufacture such things in order tod etract from his online misdeeds.

I don't need to do such things.

> But you cheat Steve of his due He is pure as the driven over snow deny
> him what you but grant him his due

Not as pure as the driven snow, but certainly not the YELLOW snow
like the two of you.

Mike:

What the heck are you referring to as DRM? DRM or "Digital Rights Management" is a form of copyright protection and should be avoided at ALL costs.

DRM has nothing to do with amateurs running webcams via radio. Unless you are afraid someone is going to steal your video!

KXHB:

Go ask the college and high school students in the EE fields why they
do not obtain amateur licenses.

I have asked, it is the code which they cite at least 90% of the time.
However, you guys don't care, and will go on speaking like that is not
true. Put your butt in a car, drive over to your local college and
have a chat with an electronics engineer professor there and the
students--then perhaps you will realize we who know are looking at you
like some crazed manic reciting a ridiculous mantra about code not
being a hindrance and the real reason amateur radio is dying...

John,

You're new around here, so I'll bring you up to date. I am a long time member of NCI, and I do not support continuation of the Morse test, so spare your jeremiads about "you guys don't care" for someone else.

Having said that, your characterization of Len as a "man before his time" is the most laughable miscasting since someone suggested John Wayne play the part of a queer hairdessser in a movie about the old west.

> > > but you don't back it up for anyone else.
> >
> > Sure I do.
>
> As I suspect you have all you need, which may wel be none at all
> The rest of us have higher standards

That you even remotely suggest that you have "higher standards" is
one of your more laughable and absolutely ludicrous assertions, Mark.

Just wading through the abortion of writing that you dare call
English proves it.

You refuse to do those things that would demonstrate that you are
doing those things necessary to improve and advance yourself.

Your "standards" are lies and deceit wrapped around ignorance and
functional illiteracy.

> > Brain insisted that I was never in MARS and know nothing about it.

Then you're certainly at liberty to provide evidence of that
claim, Mark...

We'll wait right here and add it to the list of OTHER things
you've claimed like a commission in the Armed Forces.

> > I gave him sepcific dates, times, places, callsigns, even military
> > units of assignment where pertinent.
>
> So

So indeed.

You and he claim I don't give specifics.

There's proof in this very forum that that assertion is a lie.

> > Then he said, "Oh, I need "DOCUMENTATION".
>
> And you did not provide it

Sure I did.

> > Whelp, he's got far more information to verify MY claims than any
> > he's ever provided for any claim he's ever made.
> >

> You the lazy bum you are want him to do the work of proving YOUR Claim

Nope.

He wanted specifics. I gave them.

> > As far as I am concerned, the information's been delivered.
>
> I am sure you think so, don't make it so

The fact that I did it DOES make it so.

The fact that you and Brain try to make it appear otherwise is
laughable.

> > > You don't use our own word

> A simple lie I don't have those resourses...(SNIP)

It's no lie.

You have the resources.

What you DON'T ahve is either the guts to use them OR you really
are as ignorant as I have supposed and don't realize that you have
them.

> (UNSNIP)...not without digging for them
> at best, and to say I might be able to dig out of yoour lies and
> obfucations the data is being generous in assuimng that your aren't
> lying win saying I can.

There's nothing for ME to "dig out of", Mark.

I've not lied about anything.

And you're right about ONE thing...ME granting that YOU can "do"
something >>IS<< being generaous.

> But I digress it is not MY job to prove YOUR Claims. It is not Brain or
> Lennies Job either. They are YOUR claims YOU back em up

I've already given the dates, times, places, callsigns, etc.

> As your Claims of comabt if memory serves (and it may not) you claims
> to have served under a General with REALLY big ego problems (to go with
> a his military skills) MacArther when the Chinesse entered that war,
> not that I neccesaly believe it that but as I recal that was one of
> your claims

I have been in combat. I don't discuss it here.

And EVERY man and woman in uniform serves under a general in their
military career from the day they get off the bus at boot camp. (Gee
"Colonel", you didn't KNOW that...?!?!

No ego. Fact.

> > > Now I will never try to stop you from making an ### of yourself, that

>
> Never said any such thing, the above is your distortion of what I have
> said, it is your straw man, you made up claim. as result BTW your
> presuming that YOU can dictate how people use the english language

It's absolutely NOT a "distortion".

You claimed you were drafted.

You claimed you were a field grade officer.

You then claimed you were a company grade officer.

You followed that up by claiming that your "comandig oficer"
refused to release you from active duty becasue your MOS was so
"critcal"

I did some digging and found...

...nothing. You never served a day in the Armed Forces of the
United States as either Enlisted or Officer, Active, Reserve or Guard.

When I bust THAT bubble you tried the "I was using a fake name"
routine.

Let's just face it...

Mrs Mark C Morgan is married to a chronic liar.

Huge snip of Markie trash.....................

> > Guess you ought to look at QRZ and see how my name's spelled,
> > Mark. Of course I know accuracy and truth are not your strong suits.
>
> I simply have trusted that you were not lying about the spelling of
> your name, and what is on your FCC and your real name are not going to
> be revailed by a QRZ search

No, Mark...YOU are the "this is a fake name" specialist. (Brain
and Lennie are close seconds with numerous screen names or
nomme-de-guerre's...)

Stop lying. You're not any good at it.

And who knows...Maybe if we "catch you in the truth" three times
in a row I'll have a heart attack and all your problems will be
over...But that's not likely so I won't worry about keeping my
insurance card handy...

>How we be gonna scale those pictures and live video to fit into >2.5 KHz?

Two steps:

1) Convert the pictures and video into highly-compressed digital
formats for transmission.

2) Use different modes/modulations/protocols

Shannon's Theorem tells us that we can get very high data rates through
very narrow bandwidths *if* we have adequate signal-to-noise ratio.
Note that "noise" takes many forms, not just the thermal noise we're
used to.

For example, PSK has an advantage over OOK when dealing with thermal
noise. But when dealing with other types of noise, OOK can have an
advantage. It all depends on the transmission medium. What works on a
telephone line may not work on an HF path of the same apparent
bandwidth.

>
> I thought that we were going to be able to send live video
> and digital images on HF?

You can do that now - just need enough S/N.

> Simply by hooking our computers to our rigs via the
> proper interfaces.

And software.
>
> Now it seems that the *idea* is that we are going to use

> going to need to get more spectrum in which to use.

There are all sorts of solutions. But there's a world of
difference between people talking theory and actual
application.

Most of all, some folks confuse the journey and the destination.

> > Does complex and newer equal better?

Sometimes. Not always.
>

>Is analog simpler than digital?

Sometimes!
>
> Does having a computer that attaches to the Internet
> make a person a digital expert?

Some folks think so! I don't. And besides - "digital expert" doesn't
mean someone knows much about radio.
>
> I ask for enlightenment, I get invective.

Are you surprised?

> Appears to be what there is to offer.

Now consider how effective such a person would
be trying to sell amateur radio - with or
without a code test.

Source record: 111683

N2EY:

Most of that is incorrect.

First you use "on the fly" encryption/decryption/"data compaction" and have it occurring in "real time." This has the effect of being "transparent" and the user is not even aware that it is going on.

Next, forget the sn/noise ratio other than it has to acceptable for transmission of understandable communication (however, this is required no matter what the form of data--i.e., voice, ssb, cw, etc)

Next, listen to digital signal occupying audio bandwidth (it is audio bandwidth that is of concern here, NOT rf bandwidth, except with the possibility of fm and how you implement the data compression and transmission, i.e., just make it fit the existing rf bandwidth and NO changes are needed--however, larger rf bandwidth will ALWAYS result in a drastic increase in transmission speed and wideband fm can easily offer itself to 1MBS and faster) a digital signal can be treated just like a analog signal if desired, the use of CRC checksums and error checking of the data is just more intense under these circumstances and there is NO standard established for this--so you MUST be able to make and use your own custom hardware and software. To avoid this, just grab off the shelf digital hardware/software.

Next, for every patented form of audio video protocols there are FREE forms, usually the free ones are more acceptable, efficient and suitable to ones needs, an example:
Use ogg vobis compression of audio as opposed to mp3
--in video--
Use xvid as opposed to divx 4-5

However, any of this requires a sound and current education and knowledge of the state of technology--and something which is obviously lacking here.

Why?

You can't do English any better than you could Serbo-Croatian.

He answered your question exactly.

> I'd guess for your answer that Morse encoded Cw isn't allowed but you I
> guess answering a question si too much for you

He did answer your question. Precisely.

Perhaps your "higher standards" you refered to in another thread
aren't so high, eh?...

> > centered on 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz and 5405 kHz.

Geeze, Markie...He gave you the specific mode AND frequencies
authorized.

And then you don't even have the good courtesy to thank him.

Good thing you didn't ask about power limitations...he would've
had to use a REAL technical term...ERP...That would ahve REALLY
confused you!

Sheesh!

That "band" is shared with non-Amateur users both federal and
civil.

Also, (is this guy REALLY this stupid...?!?!) the "60 meter band"
DOES fall below 30Mhz, Markie.

FYI...Since you've been in a time warp (and obviously enjoy making
a fool out of yourself rather than use a search engine to do some
research), the United States STILL requires that an Amateur licensee to
have passed Element 1 to operate below 30Mhz.

Read the regs and be enlightened...Or is reading "not in
vogue"...?!?!

Here's another of my favorites from Gearvakf, written by WA6ITF of WestLink

GEARVAKf Research Basis of No-Code Tape

Turlock, California-- April 32, 1989 - In a surprise announcement that has completely rocked the foundation of the educational community, the Wet-Link C.B. Radio Network has prematurely introduced a new "No-Code CW Training Tape Cassette' which was developed using lack of research material supplied by the world famous Gorbinsky Learning and Forgetting Center of Ohio.

This GEARVAKf-sponsored facility is the hub of the GEARVAKf-funded research into "things."

In a 1955 report authored two decades before the center was opened, it's former Director of Research Into Things, Dr. R. U. Kidding, PhD. (phud), posed the question: "Why is the sky blue and what does this have to do with learning morse code?"

Using grant monies provided by the GEARVAKf Grant Monies Institute to Research Things, Dr. Kidding attempted to contact the late Samuel F.B. Morse to ascertain the answer. By 1966, Dr. Kidding had discovered that Morse had been dead for several decades and therefore was not a plausable source for garnering his information.

While Dr. Kidding never did learn why the sky is blue, his 1979 paper titled "To Code or Not to Code--Is That a Question?" went unnoticed by the communications community for almost two decades, mainly because it as written in a VIC-20 computer, printed in 23-letter columns, and looked like a grocery list. The paper was resurrected about four days ago by the production staff at Wet-Link C.B. Radio as an excuse to put out a useless tape cassette to teach people No-Code at 0 WPM. Hosted by Niles East, the cassette is designed to instruct the listener and impart enough knowledge so that he or she can pass the Morse Code portion of the FCC No-Code ham radio exam.

Since nobody in their right or left mind would buy such trash, the only way to get one is at the WESTLINK REPORT/220 NOTES booth at the 1989 AmateurRadioVention in Dayton, Ohio. The tapes are almost for free, but not quite. GEARVAKf members are advised to show their lack of ID cards while non-members need not.

Nobody outranks anyone, except the FCC! Voluntary means voluntary, and if we had voluntary bandplanning then some would undoubtedly use the wrong mode in the wrong place, but they would have a right to do that. I am merely saying that if Hans' plan were adopted I personally would abide by the IARU bandplan. It has exclusive CW frequencies on every band, so what's the problem? (Ducks head to avoid flames!).

385. No more white noise

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-04 17:39:54 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <Kveye.3641$8f7.2882@newsread1.news.pas.earthlink.net>

The following news is noted in the GEARVAKf (the "f" is silent) Bulletin.

"White Noise" Opposed By EEOC

Use of the term "white noise" to describe the production of signals over a wide range of frequencies by the cosmos, atmospheric electrical disturbances, and radio circuitry, has been condemned by the Equal Electrical Opportunity Commission (EEOC) as discriminatory.

EEOC spokesperson, Bruce Gweemser, said use of the term is considered derogatory because it attributes either negative or positive characteristics of such signals to a particular color. "If the connotation is negative," he explained, "then Americans of the light-skinned persuasion may be offended. On the other hand, if the connotation is positive, Americans of other darker varieties of skin shading may take offense."

Gweemser said that the EEOC strongly recommends the abandonment of the term "white noise" and replacement with another, more descriptive one. "Perhaps 'electrical-American noise' might be more appropriate," Gweemser suggested.

Bullshit, plain and simple

I decide my course, you do influence it a bit, but their is no "No Code
conspricy" we nocoders don't even agree on all that much besides ending
code testing

i fear we may soon realize "black noise."

that is bad as the terms: "a heart as black as sin", "it was the
blackest day of my life", "his black deeds were indicative of his
nature", all demonstrate

black is bad

That's what

"Convert the pictures and video into highly-compressed digital
formats for transmission." means, John. Whether it's done in "real
time" is just a detail.

> Next, forget the sn/noise ratio other than it has to acceptable > for
> transmission of understandable communication (however, this is
> required no matter what the form of data--i.e., voice, ssb, cw, > etc)

Signal-to-noise is an integral part of Shannon's thereom. It cannot
simply be "forgotten".

> Next, listen to digital signal occupying audio bandwidth (it is > audio
> bandwidth that is of concern here, NOT rf bandwidth,

No, that's not correct.

The discussion is about transmitting pictures and video on the amateur
HF/MF bands. RF bandwidth is a very important thing there.

> except
> with the
> possibility of fm and how you implement the data compression
> and
> transmission, i.e., just make it fit the existing rf bandwidth > and NO

> able to
> make and use your own custom hardware and software. To avoid
> this, just grab off the shelf digital hardware/software.

And the simplest way for hams to do that at HF/MF is to use an SSB
transceiver and a computer with a sound card.

But that's not the only issue.
>
> Next, for every patented form of audio video protocols there
> are FREE
> forms, usually the free ones are more acceptable, efficient and
> suitable to ones needs, an example:
> Use ogg vobis compression of audio as opposed to mp3

And make sure the folks at the other end are similarly equipped.
>
> However, any of this requires a sound and current education and
> knowledge of the state of technology--and something which is
> obviously lacking here.

Yes, John, your lack of a sound and current education about amateur
HF/MF communications is quite evident. Good to see
you admitting it.

There's also the issue of FCC regulations. Of course those regulations
can be changed, and there are several proposals in development or
before the FCC to change them. But until they are changed, amateurs
will be constrained by the current rules, such as the 300 baud
limitation on HF. The vast majority of hams are not going to break
those rules, regardless of the available technology or their education.

The question raised by KB3EIA and N8UZE remains: How can video
be sent in a 2.5 kHz RF bandwidth on the amateur HF bands? I've
answered that question in a theoretical way. I don't think you
even understand the question and all its implications, John.

it's already out there. google for 'black noise' and not only do you find
some rap group but also a six-sigma site that uses the term for a non-random
cause of variation. there is also well known 'pink noise' that is often
used in audio testing. and of course there is the generic 'colored noise'.
this site lists not only white and pink but also brown and blue:

Actually, it is 50W ERP.

And not all the "rest of the ARS" frequencies are allowed 1.5KW.

As a study guide, please fill in the maximum amount of power allowed by any licensee on each of the following amateur frequencies:

3.680 MHz _____
7.135 MHz _____
10.125 MHz _____
21.175 MHz _____
219.125 MHz _____

73, de Hans, K0HB

, but then since i am not
using the freqs it doesn't matter

Since all the "new action" is VHF and higher and that doesn't require a code license, code should be no detriment. Or is some one fibbing to them either directly or by omission so that they do not know about the codeless Technician license.

N2EY:

that is all wet.

Although an increase in bandwidth can be used to transmit more data, what we are discussing is the protocol of binary transmission in the form of video data and in an agreed upon structure over a roughly ~5K audio bandwidth--or--simply put, data throughput measured in bits (or bytes, or words (16 bits), or double-words (32), etc, per second. This all can be done with existing, common equipment modified to do so, and easily at rates of 56K, over the audio bandwidth of most transceivers (or with minor modifications of the transceivers audio circuits), with most remain ignorant to the fact it is being done at all!

If some hams want to jack around all the standards and methods which are already in place--screw with current terminology and "encode" all this to "ham words/terminology/technology" with the hope of obfuscating the facts and making it appear that the hams have invented the internet, have at it! I am sure the digital youngsters will find this a strong draw to amateur radio.

The technology has been out there for over a decade, in everyday use for 5 years or better, and now is used widely in industry for security monitoring, etc. You can buy it off the shelf...

The real experimenters have now moved on and use nothing less than 100MBS+ nic cards and wireless wans interfaced to transceivers through computers over spread spectrum... which some one will point out is a violation of FCC regs for amateur radio bands.

It will probably be another 10 years before hams "invent" this new gig. Possibly longer if they sit around and argue whether it can be done or not... ROFLOL

But the rest of the ARS is not 1.5kw. The 30m band is limited to 200 wats max. All operators are limited to the old novice power output in the old novice portions of 15m, 40m, and 80m.

I cannot believe that you have polled tens of thousands or hundreds of
thousands about getting a license. Most of those people don't even know
amateur radio exists let alone its requiements.

Most of us think it is silly to cut off your nose to spite your face. And
most of us know it is far more effective to attempt changes from the inside
rather than remaining on the outside and looking in.

> ... that is why they hate you, you were a man before your time my friend!

Again no one hates him but simply will not tolerate his derogatory comments.
The moment that someone disagrees with him, he starts in on that approach
and continues in that vein despite the fact that some of us have persisted
in remaining polite and not calling him names.

Some of us finally have refused to feed the troll and do not respond to his
posts.

To be effective in the real world, one does not insult people with derogatory remarks. In my profession, I frequently have to convince people that the new is better than the old. Insults and put downs would get me thrown out the door and cost me a job. It doesn't get a whole lot more real than that.

It takes tact along with accurate and verifiable data to implement new proposals. The cutting edge people in the real world know this although it may come as a shock to those in academia.

Len does not use tact and does not present accurate and verifiable data.

You are getting there, sort of...it's actually deeper than that.

>You have made a statement that cw is ridiculous and protested by never
>getting an amateur license--now there are tens of thousands or even
>hundreds of thousands who have joined you--I see them everyday--they
>refuse to get a license because of the code...

See the classical reducto ad absurdum response of Hans Brakob. :-)

Most of the commentary by the "regulars" (nearly all Pro-Code
Test Advocates (PCTA) amateur extras is predictable and worded
in the classical "league-speak" that has washed their brains.

They are few and NONE of the are, in any way, "representative"
of the "amateur community" despite what they exclaim. NONE of
them (Brakob included) accept any contrary commentary and each
feels that their tight clique must remain sound...regardless...

The "reply" that is a classic reduction-to-the-absurd of Brakob
is just one style of highly-negative response to "outsiders"
(those who do not think as the clique does). Heil stresses
the "personal involvement" as if he is a moral arbiter of all
but that is his only remaining retort and the glass of the retort
is cracked. Miccolis is firmly entrenched into a mindset of
amateur radio of days prior to his existance...a condition
that may have been caused by way too much rereading of ancient
copies of QST enshrined in his basement. Kelly is basically a
blustering Philly Tuff Guy who don' take nuttin from nobody!
Flint is one of the truer products of league pre-conditioning
("brainwashed" in familiar terms) but, to her credit, defends
the Newington barricades vigorously. Robeson is the emotional
wreckage of an exploded loose cannon littering the imaginary
battlefield. Jeswald ("Dan/W4NTI" who apparently changed
his surname) acts the southern-fried good-ole-boy and is little
more than a braggart, nasty when drunk.

There have been others, but the above coterie (perhaps 'cotillion'
of ancient debutantes/dilettants) makes up the "representative"
body in here. Each is a Special Interest Group of One. They
purport to be the "Voice of Amateur Radio" yet all speak
solely for their own particular desires and each holds to an

intimation that they are the proper role model for others.
["all must do as they did to be as good as they"]

Thousands of others interested in radio have come on various scenes before I did. THEY are the ones that pushed forward for the no-code-test Technician Class license creation. Such was created. The God-fearing morsemen all sounded the Hue and Cry with the "death of amateur radio (without the beloved code test to show the "dedication and committment to the amateur community")" on their lips. At present, the "lesser-class" licensees in U.S. amateur radio (Technicians) amount to 48.43% of all individual licenses as of 2 Jul 05. That was achieved in a scant 14 years. Had the Technician classes not existed, U.S. amateur radio licensees would have shrunk to less than 60% of its current size now. The intrinsic appeal of morse code ("try it you'll like it!") is nebulous, more vapor than substance.

Amateur radio - as the olde-fahrts knew it - IS beginning to shrink. Without change, it WILL die out...but after the olde-fahrts do. The olde-fahrts are Holding Back The Dawn, fearing the sunshine of new ideas like vampires trembling at sunrise. At best, their "new ideas" exist in the "new band" trials at 600 meters...the old 500 KHz maritime distress and safety frequency that was. "CW" of course. All is morsemanship in the ARS (Archaic Radiotelegraph Society)...that "cutting edge mode" exemplifying "keeping up with the state of the art." "Bang the Carrier Slowly" would be an alternate title.

>... that is why they hate you, you were a man before your time my
>friend!

Not really. I disturb their self-image of expertise and elitism. I challenge their brags with some experience in HF and VHF and UHF and microwaves communications. That is the breaking of illusions they harbor, a sort of mental Krystalnacht of theirs and they feel persecuted, seek vengence and retribution for disturbing their fantasies of glory, honor, and nobility. [I pop their balloons]

Others have been the pioneers of NCTA-ism. They were before me. They deserve the credit, not me. I'm simply outspoken and on the other side of them. They can't handle it...the league hasn't instructed them on how to handle such humans...they revert to middle school taunts, acting like middle-aged children. Tsk, tsk. :-)

>And, your protest is being voiced by a strong majority today.

The PCTA hear not. The olde-fahrts holding back the dawn hear not. They will resist until the last code key is pried from their cold, dead fingers. They WERE "operators."

Dee:

Developing a sense of humor and being able to have "fun" poked at oneself is viewed as desirable by some, indeed, those who take themselves far too seriously are an offence to me--whether they realize it or not, sometimes I am polite and don't point that out (rarely though. <grin>)

As a side note, I am running MS Agent (Microsoft Agent--all components of this are either already in windows xp or downloadable for windows 95 and up, a friend in france supplied me with the french engine) text-to-speech and speech-to-text engines.

I find with the french library of phonics I am able to chat with french speakers to a remarkably good degree of success, and I am the only one which needs to run the software, doing ALL translation on my end solely! (but makes "me" sound rather "robotic" when I "speak" french. <grin>

A transceiver, computer/"sound card" and the free software is all which is necessary to begin using/experimenting (the speech phonic library(s) may have to be purchased for some languages--I am unclear on this, and an ability to a software programmer or access to a programmer is highly suggested.)

I am beginning to look upon this as Capt. Kirk's "universal translator", when the aliens finally show up (and can supply me with a proper speech engine) I plan on being among the first to verbally greet them! <grin>

Anyway, this is an area where experimenters should come. As, I know of only a handful of techies experimenting here and of no "successful" commercial products on the market.

If there exists any of a competitive nature, here are the waters to weigh anchor and hold battle!

John

Video, at this point, is pretty much "ho-hum stuff."

>> Len:
>
>> I finally figured out why they truly hate you here!
>
>No one hates him but everyone gets tired of his derogatory remarks and
>antiquated stories.

Antiquated Stories and Deragatory Remarks:

1. Hiram goes to Washington in 1918 to save ham radio's future!

2. Hams "pioneer SW [HF] bands" after 1923.

3. Saipan is "saved" by hams loading up a fence!

4. AM broadcasting is begun in 1906 (by a carbon mike in the
antenna lead to "modulate" it...the technique for all
subsequent AM broadcasters!).

5. "CW gets through when nothing else will!" (from 1930s)

6. "Putz! "Technician!" etc. (from loose-cannon Robeson)

>> You have made a statement that cw is ridiculous and protested by never
>> getting an amateur license--now there are tens of thousands or even
>> hundreds of thousands who have joined you--I see them everyday--they
>> refuse to get a license because of the code...
>
>I cannot believe that you have polled tens of thousands or hundreds of
>thousands about getting a license. Most of those people don't even know
>amateur radio exists let alone its requiements.

YOU have "polled all those people" to PROVE they "don't even know
amateur radio exists?" We didn't know that! :-)

>Most of us think it is silly to cut off your nose to spite your face. And
>most of us know it is far more effective to attempt changes from the inside
>rather than remaining on the outside and looking in.

Tsk, tsk. Amateur radio is only ONE "window" to the EM spectrum.
A rather small one at that. I've been looking through "windows"
(plural), lots of them, bigger ones, for the last half century.
From the "inside." :-)

Might I suggest you WASH your little "window?" It would make it
far easier for others to see into that small room called ham
radio. Then again, you might NOT want "outsiders" to look in. :-)

>> ... that is why they hate you, you were a man before your time my friend!
>> And, your protest is being voiced by a strong majority today.

>Again no one hates him but simply will not tolerate his derogatory comments.
>The moment that someone disagrees with him, he starts in on that approach
>and continues in that vein despite the fact that some of us have persisted
>in remaining polite and not calling him names.

All that "politeness" and "non" name-calling by all of you "us"
is archived in Google. :-)

"Horrid!" isn't it? :-) [your word, not mine...]

>Some of us finally have refused to feed the troll and do not respond to his
>posts.

Ah! "Politeness!" Those you do not like are called "trolls!"

:-) Hypocrisy is your handmaiden...

Tsk, for someone who "does not respond," there seems a rather
strong, lengthy, and "antiquated" RESPONSE! :-)

Hello? What "profession" is that? :-)

I've only been in the electronics profession for...um...53 years
now. Life Member in the IEEE, an international professional
association. Guess that doesn't count, does it? :-)

Is this newsgroup participation a "profession?"

>Insults and put downs would get me
>thrown out the door and cost me a job. It doesn't get a whole lot more real
>than that.

Oh, I think that 53 years of actual professional participation
might agree with you...and also disagree with you. Have you ever
been on both sides of a Design Review meeting? :-)

>It takes tact along with accurate and verifiable data to implement new
>proposals.

...which doesn't apply to REMOVING an ancient test element for
a radio hobby license. :-)

Where is the "tact" and "accurate and verifiable data" to support
the subjective claims, necessities, nobilities, expertise of
morsemanship for a radio hobby? Ain't there, is it? :-)

> The cutting edge people in the real world know this although it
>may come as a shock to those in academia.

...which means what? Morsemanship is "cutting edge" comms? :-)

[put the cover back on your jar of academia nuts]

>Len does not use tact and does not present accurate and verifiable data.

Tsk. I've used hundreds of tacts to nail your morsemanship to
the carpet and you still think that carpet will fly! :-)

I'd best re-do my PowerPoint files, then?

I'd use Vu-Graphs but your projector's bulb is burned out...

One the NoCode status of the tech license is not that well known.
Indeed until 26 day before I had my license I did not know of the no
Code license, this aas after year of the no code licesne

Two lots of folks (lets leave it vauage) go on and and on about how you
can't do anything with the tech licesne

Three VHF is hardly where the New action is Microwves

Not really, Steve. We just wonder why you pay any attention in the
first place, then find it necessary to comment? I'm sure that in your
sick mind, you can justify it somehow. Best of luck getting back to
normal.
```

Since we're all having a heart to hear here....

I guess I should note that I do not use Morse code (even though I
support the testing) at all.

So much for typecasting at least you and me, eh?

I guess I might also note that I make my coin in digital imagery. We
would love it if a person came up with a method of transferring decent
size, decent fidelity pictures in reasonable amount of time using a
small bandwidth. At HF frequencies.....

Oooh, there could be a problem there! There are limits to the compression, and we have exceeded them in some forms already. Check to see how many vertical pans there are on video signals lately. The compression on the digital signals (note that even if you are getting your feed via analog cable, you are still almost certainly looking at a digital signal) already calls for some major aliasing.

There are limits, and there are limits. How much more are we going to throw away?

> And software.

I really didn't think it was all that simple. Why don't we get together
and pop off a live video system for say the 160 meter band. The video
would be real time, 30 fps, and otherwise like broadcast video. Better
yet, Why don't we do it at computer resolution?

>>Now it seems that the *idea* is that we are going to use

You wishing it were so doesn't make it true.

The reason that your specifics aren't being accepted is that you have
less than a stellar record when it comes to the truth.

So...

Authentic Documentation is required. And two Photo ID's. Got any?

Mike:

Oh no. Now someone is going to have to explain ccd cams and pixels to you, huh? Take a course!

The short course goes, "a pixel either relates to a byte, a word (16 bits) or a double-word (32-bits, or larger)--you grab the pixels from the cam (bytes, words, etc)--you compress them, you send them, the guy at the other end uncompress them, sends them to his video card and views them...

Geesh, are you guys all setting around the same computer in some old age home?

If you even mention old analog cams from some Smithsonian the guys in the white coats will be here!

John

Okay...such as Erich von Stroheim doing light comedy? :-)

He might even direct Owen Wilson as a heroic action hero!

Maybe a Hardy Boys series? "Hardy Boys go to Newington!"
[starring Jim Nabors and Richard Chamberlain]

It would be more entertaining to watch that true-life
documentary "Independence Day." ["morse code saves Terra!"]

Excuse me, I've got to polish up my PowerPoint presentation
files to meet the requirements of Our Girl Flint.

buy, buy,

bit bit

Don't they know the code? I thought the original reason to learn Morse
Code was because other users could understand and communicate i.e., get
off my frequency, with amateurs.

> Also, (is this guy REALLY this stupid...?!?!) the "60 meter band"
> DOES fall below 30Mhz, Markie.

Actually, you are. He is the one who stated, "interesting that a band
rquiring code testing forbids code use." Morse Code testing is for
"below 30MHz."

> FYI...Since you've been in a time warp (and obviously enjoy making
> a fool out of yourself rather than use a search engine to do some

You're the one who made the mistake then attacked Mark over it. Makes
you the idiot.

the United States STILL requires that an Amateur licensee to
> have passed Element 1 to operate below 30Mhz.

Must be why he said, "interesting that a band rquiring code testing
forbids code use." Too bad you missed it.

> Read the regs and be enlightened...Or is reading "not in
> vogue"...?!?!
>
> Steve, K4YZ

Read the post and be enlightened, instead of going off on yet another
Robeson rant.

No it does not it requires them to be tested on bands assigned to the
general and extra bands

Of course! But it all depends what you consider "acceptable quality"...

OTOH, if all you want is B&W ~CGA video....

> There are limits, and there are limits. How much more are we
> going to throw away?

Always a tradeoff. Hams routinely use 1.8 kHz wide SSB filters for
"communications quality". Hardly hi-fi but it can make the difference
between QSO and QRJ.

Use modes designed for the purpose. See below.
>
> > For example, PSK has an advantage over OOK when dealing with > > thermal

> >>and digital images on HF?

> > You can do that now - just need enough S/N.

> Always?

No mode always gets through.

But if you have enough S/N, all sorts of things are possible.

Here's one way. I apologize if you are way beyond this simplified
example:

Consider how PSK31 works in BPSK mode. There are just two basic
modulation states - 0 degrees and 180 degrees. One bit per unit time.

But in QPSK mode, there are four basic modulation states - 0 degrees,
90 degrees, 180 degrees and 270 degrees. Two bits per unit time, but
the bandwidth is no greater than with BPSK. Only problem is that you
need a transmitter, receiver and transmission medium whose total
distortion is low enough that you can accurately tell the four states
apart.

Now consider a theoretical "256PSK" mode, in which there are 256
states: 0 degrees, 360/256 degree, 720/256 degrees, etc., all the way
to ~359 degrees. 8 bits in one unit time, in the same bandwidth! But
you need a transmitter, receiver and transmission medium whose total
distortion is low enough that you can accurately tell the 256 states
apart.

You can see that if we just keep increasing the number of states, the
number of bits per unit time in the same bandwidth keeps going up. But
you need more and more accurate modulator/medium/demodulator - IOW,
better and better signal-to-noise. Or to look at it another way, the
mode carries huge amounts of data in a tiny bandwidth but has very
little tolerance for noise that takes the form of phase distortion.

Now imagine multiple spaced carriers in the 2.5 kHz bandwidth all
carrying data - lotta bits, huh?

Of course you may find that in practice it's not that easy to get a
modulator/medium/demodulator setup that meets the requirements -
particularly if the medium is HF RF with relatively low power.

> >>Simply by hooking our computers to our rigs via the

An important detail indeed if the image is going to be transmitted in
real time. Presumably some time might be alloted if the image were to be
delayed by a second or so.

Forgetting signal to noise is what makes me believe that these claims
are more snake oil than substance.

You are correct, Jim. That RF bandwidth must be capable of carrying whatever "audio bandwidth" there is. Listening to the audible portion of a digital signal is an interesting metric though! ;^)

> The discussion is about transmitting pictures and video on the amateur
> HF/MF bands. RF bandwidth is a very important thing there.

Very very important.

Waaayy overly simplified. If it were just a matter of compressing the signal until it fit into whatever bandwidth was desired/needed/mandated, don't you think we would have gone that route, instead of inventing faster modems, T-lines, Cable modems and DSL? There are limits which we passed a long time ago, after which data MUST be thrown away. There are finite limits that imagery or video cannot be compressed without sacrifices in fidelity.

> But that's not the only issue.

Hardly!

Oh, yeah. A lot of people forget about that one. We need someone to
communicate with.

Some things for people to think about:

There is nothing preventing the use of digital imagery or video at HF
frequencies. NO majik involved.

But!

The bandwidth needed for the data being sent may very well approach or
exceed the frequency being used for the transmission!

This means that the data needs compressed or the time needs expanded.

Compression has well defined limits. Beyond these limits, data must be
thrown away. This is why original images (or video) should be performed
in as high a resolution and as low a compression as possible. It is
always possible to throw away data, but not get back data that has been
discarded.

So beyond whatever minimal image quality is agreed upon, time must be
expanded. 300 baud is exceptionally slow by today's standards. I worked
up some times on transmission of a level 5 640 by 480 jpeg earlier in
this thread. I don't consider those times acceptable.

So here we are.

Yup, and no one has persuaded me it can't be done. I've only been persuaded that we haven't figured out how yet. (Sorta reminds you, doesn't it, of how those old-tymey hams must have felt when they were told to take their party to "200 meters and below".) You, Jim, and Dee bemoaning how hard it will be, and John raising the tantalizing notion that we may only be a few "eureka!!!"s away from something workable. Outside my area of competence, but I'll watch the dialog with interest.

It was mostly, Dan, to highlight that mistakes--and ignorance--can and do happen in any circumstance. That I do not understand the technicality of most of amateur radio, is as much similar to the fact that you make common grammatical and spelling errors in a language you fluently speak.

So, as abrasive as you are, surely you are human enough to recognize that your criticism, chagrin, hateful conduct, and judgment of me is pretty darned ridiculous. If you are not human enough, so be it. And, come to think of it, your sentence structure, below, should have been: "But, come to think of it, sham is appropriate for you, too."

You may as well define what sham I am undertaking. Are you implying that I am not a licensed amateur radio operator? What "sham," Dan?

Mike:

300 baud is ridiculous, in Dee's first post mentioning 300 baud I tossed it out the window--that was fine up to about 1985, then only the mentally challenged continued to run 300 baud modems!

At the speeds needed, an arthritic old amateur with a brass key would be more successful at sending binary data than a 300 baud modem! <tongue-in-cheek>

More than 90% modulation on the carrier of a HS data transmission is what to be wary of, begins to cause splatter like no ones business, a heavy duty compressor on the audio might be a fix, I have thought about it...

```
binary data is two state data from its very state of being, on or off

normalize your noise level (to a value which will always be subtracted
from the "on markers") then there is only two states in question, an
on and an off

next, you are NOT actually transmitting ones and zeros (on's and
off's), but are transmitting "markers", the length (time)between the
"markers" is what determines if it a one or a zero (or a sting of two
or more ones or zeros, under proper compression techniques.)

If those markers are above the noise level--you have uncorrupted
data--if not, you do have corrupted data, since data is transmitted in
"packets", and since each and every (say in this case) 1024 bit packet
is checked against a CRC (Cyclic Redundancy Check "value"), corrupted
packets are tossed away and a request to resend is initiated. Packets
are sequentially numbered so as to keep their display sequence in
proper sync.

My experience is that most digital transmissions can take place with
acceptable success if cw can... and I expect that statement to fall to
heavy challenge! <smirk>

I believe that the point was being made that you appear virtually clueless
about legal operations permitted in the amateur bands. What started out as
a whine about CW rapidly changed when it became apparent that you also seem
ignorant of power limitations in varous other amateur bands.

For what it is worth, there are other limitations that may come into play if
you are a licensed amateur in close proximity to a radio telescope (the
Aricibo site in Puerto Rico is but one where other limitations may apply).

From my understanding of John's comments, he is saying it can be done now with current technology. He does not however tell us how. He just chatters on about "compressing it enough" without stating the degree of compression, etc.

Hey I'm all for the "eureka" when it happens but the problem is that it is unpredictable. Not only is it unpredictable in time but in the nature of the breakthrough.

Please show me and everyone else how we can run more than 300 baud on HF
without exceeding reasonable band widths. There are a whole lot of things,
not just video, that would be nice to do.

How can we do it? Bandwidth is directly related to baud rate.

That's what makes ham radio some damn much fun! In my profession role I can send a team of engineers off with some marketeers scribbling and know that within 12-18 months I'll be shipping product. Bnt ham radio is not so predicable --- we get these delightful surprises from unexpected places.

Some like APRS and PSK-xx gain traction and thrive in a niche, others like AX.25 packet radio and 2-meter autopatches which blossom like an Independence Day firework, then fizzle to a few sparks on the ground after a short period of glory.

Then there are a few genuine "revolutions" which fundamentally change the nature of amateur radio. We're about due for one of those.

Why is this conversation hung up on 300 baud?

It's perfectly legal, for example to run digital voice (J2E) on HF under todays FCC rules, and it will fit nicely in the generally accepted 3KHz band width now used by traditional SSB. 97.307(f)(3) applies to rtty/data transmission, it does not apply to voice or image.

Why should I care at this point what limtis apply at HF

Ignorant perhaps > caring what they are on hf absolutely

What happened is a smart ass decide to show off and not bother
answering the real question was cw permited.

It's an FCC specification that essentially says "USB carrying
voice of frequencies 300 to 3KHz". Also the FCC specifies
a SSB channel frequency by the frequency in the center of
the transmitted RF spectra. Audio at 300Hz corresponds
to frequency "X-(2700/2)", 3KHz to "X+(2700/2)" where "X"
is the center of the channel. "X" would be 1650Hz higher than
the traditional ham radio method of specifying a USB frequency
(hams specify the frequency of the suppressed carrier). Aside
from 60M, the FCC doesn't specify how we are to specify our
frequencies; they just say "Here's your permitted bands for
SSB, keep all of your RF inside them". 60M is special in
that the FCC wanted hams to blend seamlessly with other existing
users (meaning that those other users could easily listen and talk
(say in emergencies) to us on their existing channelized equipment.
And we got these five specific channels because the other users
don't use them that much compared to other channels.

It's not bigotry if it's true.

You have sex (per your own admission) with other men.

Ergo, you're gay.

Where's the bigotry in calling you "gay" if you are indeed gay?

Or are you now withdrawing your claim of having sex with men?

Dee:

You don't understand binary compression techniques, ok...

... it all has to do with binary trees (well, mostly, kind of), in software, of the data stream, multiple bytes are converted into "data streams", i.e., a pixel "byte" at this level is NOT necessarily 8 bits long in a stream, and sometimes can be represented by a single bit (automatic compression to 1/8 size just because it is stored in a binary tree! (or, data stream) multiple occurring bytes can be sent in the form of (five of these) or ((67 <- number of bytes) of (00100100 <- binary data byte to create 67 of)), in other words you tell it how many of ONE type of data to create on the other end to fill in the "video hole" on the screen, I would think you can visualize how small a simple BW image can be transmitted--it grows bigger with grayscale data, and much bigger with color data (in quality pictures an extra few bits have to be sent just to describe the color/brightness of the pixel being sent...)

... there is also "variable bit rate compression" which I don't even want to begin to try to give a simplified explanation of here...

I am sorry, my ability to describe these complex methods at work here is lacking, and I realize this...
don't trust me on it, the web is loaded with papers on every aspect of it...

The size of compressed data? That depends on the data types compressed, BW video can be 90%+ compressed (resulting in data 1/10 to 1/20 the size, or MORE, it all just depends on the complexity of the image.) For example, a completely white frame would be (for example) 1,024,000 bytes of color 00000000--this whole screen could be transmitted in TWO BYTES!
and the same for an all black screen, at EXTREME RESOLUTION in this simplified case.

Further "compression" can be had down at the hardware level where the transmission software can "scan" data and "table-ize" streams of duplicate bytes, or very similar bytes which can all be represented by a common value with little or no detectable loss in "realized visual quality." (can you really tell almost-almost black from "real" black? Or, almost-almost-blue from "real" blue?)

In a very efficient compression scheme, it can be "mentally modeled" as a onion, where many "layers" of compression are occurring in a tight sequential loop creating very tightly compressed data packets,

with crc sums to ensure no data corruption and packets sequentially numbered to provide a "sane" display stream (this can frequently be rather lax with low quality audio (speech) and less than absolute perfect video.)

Digital cell phones use very similar techniques on audio. Some of the "trade secrets" there are closely protected...

It is really beyond the resources we have here to go into a deep explanation on data compression techniques, and cheap tricks and short cuts--a good book on the subject should bring one up to speed quickly--perhaps amazon.com for those with a desire for a in-depth understanding...

Now some "cheap tricks" examples:

you can actually throw away every other pixel (immediately cut the size of a video frame in half!) by using a "normalized" colored pixel in those "dropped" pixels place (and normalizing this "fill in pixel color" as needed to fit the "general background" of the rest of the picture--with NOT as great a loss of video quality as you would expect (or a smaller percentage of "normalized" pixels if greater quality is really needed)

and, a smaller than screen sized "picture" can be broadcast and "expanded" by "image size extrapolation" (computer makes a lot of guesses on how to represent it as a larger picture and "fill the screen"--and attempts to have those "guesses" maintain a reasonable quality of picture.

and, I could go on and on, however, this is quickly becoming WAY beyond the scope of the arena we need to hold this "argument/discussion" within... and there are papers and books which can do a much finer job than I...

I must say, Len was quite correct in the appraisal of your mental aptitude, I would venture to say this with confidence, as damn few women would have hung with this technical discussion as you have...

... are you single, just how old are you? <leering-smile>

... just kidding, well, mostly--I AM single yanno!
<grin>

Warmest regards,
John

If we ask you to leave, or be silent, it is "gay bashing", the "visual images" your "lifestyle" brings to mind is/are offensive to me.

No. This is not gay bashing, it is insane rudeness on your part, and like some spoiled child I expect that you will force your bad behavior on us all.

Rarely will I banish one to the "bit bucket", you make it easy to do so without regret...

I have to imagine that there must be a lot of power, despite the
sensitivity being to phase distortion. When I look at my phase display,
there is a lot of noise showing up that can become bogus phase noise.

You're right. Your multi-angle psk is the closest thing to possibility
that I have seen yet. For Satellites and other UHF applications, it
starts to become possible/practical:

http://www.tech-faq.com/qpsk.shtml

They also write about 8psk. Note that link degradation is an issue.

Here on HF, we just don't have the proper conditions. I can do
quadrature mode, but almost no one does. I've done some QSO's using
BPSK63, but of course that uses more BW.

But imagine! Someone (you) writing about something with a real
possibility, not just calling me stupid or ignorant, etc!!!!

Sunnavagun (with apologies to Hans)
BTW, 20 meters is going to town tonight!

Dee:

This "show me", "show me" you are repeating causes a complete confusion on my part.

Will you agree that a 56K phone modem, does indeed, transmit this data rate with an audio bandwidth of ~300Hz to ~5000K, and if you do so agree, how can you argue this cannot fit in a HF AM RF signal which only goes 2.5K each side of center frequency??????????

Are you NOT imposing an audio frequency of AT LEAST a 5K bandwidth on the rf carrier with normal speech? (actually, most quality transceivers have a wider audio bandwidth than this which can be set +/-) and if you agree you are indeed, how can you argue that 5K bandwidth can carry a 56K data rate over a phone line--and NOT a hf rf signal???? That looks insane to me?

The modem is NOT using the whole 5K bandwidth--necessarily, there is compression into a narrower bandwidth which can and is generally software controlled--if necessary (the modems software is a LOT smarter than most give it credit for, especially in the case of the old "onboard processor" and "hardware logic" USRobotics external modems.

You need to explain to me why it even begins to look difficult to you for me to be able to understand what you are asking?

As, I have to be missing something here...

You do realize that a picture good enough to run a "webcam" on the amateur HF bands and get an acceptable image from can be done in 28K (or less depending on the fps), and 36K is really fine at 5 fps and good at 10 fps--you will be able to see the wart on the guys nose you are video conferencing with at 36K!!!

You know, I have not even looked to see on the web, but aren't tons of people doing this right now as we newsgroup?

I suppose you could actually use the rf signal as data carrier itself and modulate it directly through on/off switching, as opposed to modulating the rf carrier with the audio data carrier... but that would take some heavy duty equip mods/revamps, if it didn't wipe out the neighbors cable tv! <grin>

Think about this:
at 100 mhz if you can precisely control the EXACT amplitude of each and every cycle of rf out the back end of the xmitter, you have a

virtual 100mbs data carrier... most are working here... 450 MHz?
1Ghz? 12Ghz?

... and of course, the receiver has to be able to decipher the
amplitudes of each cycle back to a data stream for the video card...

... this is the land where dreamers are...

> from something workable.

He also give a lot of solid technical ways in which this can be done, eh?

> Outside my area of competence, but I'll watch the
> dialog with interest.

Hey, Hans, ignorance is not a crime! Note that Jim brought up an
actual method of trying to do a lot of BW using 256 or more phase
angles that are decoded by the receiving station. That is not likely to
work at HF, but a simplified version of this is used for some satellite
comms. they (see my link in my post to Jim) note that QPSK is more
reliable - or at least suffers less from link degradation - same thing,
than 8PSK. But there is some theory there that can be discussed.

And as for "bemoaning", I have been asking for something based in
solid theory since early in this thread. Most of what I have gotten in
return is that I am an olde tyme ham (untrue) stuck on CW with my Bug
(paraphrased, but laughably untrue), and topic shifted to DRM voice
(technically working, but beside the point). That ain't substance.

Challenge, "John Smith"!

DO IT!

Post the method in which you and I can send live Video to each other via whichever HF band will propagate between our QTH's, and I will build a duplicate. We can set up a sked. Once we have established live communications, I will most certainly apologize for my olde tyme hamminess. Let us keep everything in the group so that I may apologize publicly when proven wrong.

Anxiously awaiting your system outline and diagrams..

And another thing. I recall Jim or Kelly or some other Extra explain
that prior to the first 5wpm code exam, that there was no code exam.
But it was important to be able to understand code so that a government
station could tell you that you were interfering with them. And so
they implemented the 5wpm exam. And now that no other service uses
code...

More so than that, Hans. This would be a real breakthrough!

Bandwidth is a precious commodity. That we are looking at a method of transmission that breaks Shannon's law is one thing, but here is a method that will allow us to send video at frequencies that are less than their original needed bandwidth!!!!! If that isn't a revolution, I don't know what is!

"John" should be thankful for my gauntlet that I tossed him. He will be a *wealthy* man after his system is in place and working!

I mean we do all know why there is more bandwidth available as the frequency is increased, no? No change in the *really* basic laws governing bandwidth, correct? John's method, upon successful completion, means that with simply using a personal computer, we will be able to stuff immense amounts more data into all the available bands. The problems of bandwidth squeeze will go away, and quickly!

What is most amazing is that a lot of engineers and programmers have been working on this problem for a long time, and now an anonymous poster in a newsgroup has figured out how to do it - with a PC and a sound card no less. Amazing indeed....

I'll be proud just to be proven wrong on such a momentous moment in communications history.

So, fit it into 3KHz, if that will be legal. John's system is
forthcoming soon. Live video will be broadcast on HF, probably in a few
months.

It has been posted, it has been done, years ago.

For some reason you guys seem to claim a 56K phone modem which operated within a ~5K audio bandwidth will suddenly cease to be able to do so when hooked to a transceiver providing it with a ~5K audio bandwidth...

... logic which I am at a loss of words to describe--of how stupid that logic looks...

... and seems to pose the insane question of, "When is 5K really "NOT" 5K?" Or, "Are phone lines magic?"

... or, "Whatever happened to the ~5K audio on my transceiver, and why did it suddenly stop when I kludged on a modem?"

... or just, "Do I look confused to you?"

... or, "Am I dreaming all of this?"

... or, "HELLO? Is anyone at home there?"

Um, John, just as a simple experiment, what do you get when you modulate say a 14 MHz signal with that 4 GHz signal?

note: not that you would do that for a live video system, but are you starting to see my point? What happens at the computer is not the issue. It is what happens at the frequency we are trying to use.

Computer clock speed is not relevant to the the issue. It is how much data an HF signal can handle.

There have been a lot of engineers, mathematicians and programmers working on this problem. If you have a method of doing this, I *strongly* suggest that you hire a patent attorney, and get to work. You are gonna be rich, man!

I'm willing to help you with the initial experiments. In fact, in the interest of the furtherance of Ham radio, science, and mankind, I have challenged you to produce such a system.

Post it, John! I will duplicate the system and we will sked on HF.

But if you are speaking of connecting a 56K modem to an HF rig, you are
not even *close* to the BW that is needed.

Mike:

Have you ever seen a webcam on a computer hooked to a 56K modem which
is hooked to a phone line and used for video conference?

... so now your argument has become, "Webcams on computers are magic?
But cease to function on when the "signal" is fed to a transceiver!"

People used to use 'em on 14K modems, but with rather poor results...
Get real!

Let's stay relevant here, enough of your fancy dancing...

The question is, "What do you get when you modulate a HF RF signal
with a 5K audio (speech or modem) signal?

Answer:
A transmission highly acceptable to the FCC, the ARRL and probably GOD
himself!

ROFLOL!

All that has nothing to do with the ARRL being some reason for *you* not
getting a license. If you really wanted to put forth the effort to get a
license you would, ARRL or no ARRL. You just want to whine.

indeed fromt he History I have read at first their were just hams (no
tests etc) then code testing was introduced for exactly the purpose of
allowing Govt to warn us off their freqs

Indeed that was why what became s25.2 can into existance in the first
place

Mike:

Yanno. Have you ever even seen a 56K USRobotics Courier Modem (the very first ones were 36K and upgraded with a simple 56K flash--upgrade from software to their internal static memory--when the upgrade finally became available)

As, there was "controversy" back then if a 56K modem ran on phone lines would cause interference, "cross talk", etc., it all turned out to be a ridiculous argument--one akin to the one posed of hooking a fast modem to a xmitter...

It sold for ~$350.00+ when new (about 1995-1999) and does ALL data processing within itself (it has a 8086 intel processor onboard), this includes compaction/de-compaction, error control, line-signal power adjustments, feeding/pulling data, etc. It virtually "pumps" data to the computer buffers and virtually "yanks" data from them (I think I have heard the data screaming at times! <grin>)

It virtually is a standalone computer with but one function in life, send and recv data. It is a black box about 6 inches wide, 12 inches long and under 2 inches high. During the usefulness of 56K modems it had no equal--that stands to this very day.

It virtually puts NO demand/load on the computers processor, and insists on doing EVERYTHING itself...

... one reason it is termed the "v.everything" by USR... it is software upgradeable with 512,000 bytes of read-only flash memory. It was a marvel of technology in the data transmission field, it really still is...

A piece of hardware like that simplifies the project from the very beginning... you might be lucky enough to find an old one on ebay... the "sportster" models are NOT ONE-HALF the modem a courier is...

... when it hits error free transmission of data in the "kludged use" of it, the data throughput is actually just a hair (few bytes) less than 57K. It can actually keep logs and display data throughput to your screen all on its own...

So percentage of those hams with their rigs 'opened up' transmit on
frequencies outside the ham bands? What percentage of those cbers' with
their rigs 'opened up' transmit on frequencies outside the cb band?

No nor am I confirming it either

It is none of your bussnes and has nothing to do with the ARS

in claiming it does YOUR prove yourself a bigot

>
> Steve, K4YZ

Oh, for crying out loud. Listen to you. So what if someone dislikes gays
(note no Caps there..) or has a dislike for blacks. Or Illegal Aliens. So
what?
What do you expect them to do? Roll over and go belly up simply because
"you" accuse them of being prejudiced? So, big deal. Who are you in the
scheme of things? What gives you the right?
One can easily loathe these Liberals who think, erroneously, that their

accusations of bigotry or racism will cause Mainstream Mr. and Mrs. America to recoil for fear of being 'branded' by the mewling leftistas as bigots. Sorry, boys. Your accusations no longer hold the sting they once did. Mr. and Mrs. America no longer care about you or your political correctness bovine scat.
Oh, and one more item for you Leftistas...it is my right to feel or be prejudiced and it is my right to flaunt it in your face.
Now, what are you going to do about it? Call me a "Bigot"?
Big deal.

Mike:

Wealthy man, setting the ten hams up in existence with webcams on
their rigs and letting them claim they invented the internet?

(Hey, who really did invent the internet, Al Gore or hams--frankly I
believe Al Gore more!)

Krist, equipment manufacturers are already abandoning hams, your next
transceiver will be made by "Cobra", they can supply you with ham
rigs--they are already manufacturing CB rigs!

Just consider it "radio welfare" for hams. Your "entitlement." <grin>

So what I expect that hey can be deal with the fact it has nothing to
do with ham radio.

And I don't say that they can't hate and laothe me if they like merely
not harrass me for it

BTW if some of these Basers could admit they were doing it would be an
improvement

> What do you expect them to do? Roll over and go belly up simply because

But not to try and harrass someone out of public life. I have always
agreed you have those rights

BUT one it is others that have engaged in stalking to find these
"facts" andd then try to use them to silence me and others

> Now, what are you going to do about it? Call me a "Bigot"?

So what:

Here where I live you get to see it all. Blacks here are terribly discriminated against. The cops seem to always be picking on the ones carrying stolen tv sets out of other peoples apartments, stealing cars, involved in drugs, rapes, gang murders, beatings, stabbings, etc. I think it is terrible, they should turn them lose from the prisons where they make up 80% of the population and go live next to "an_old_friend."

He could take care of them there and protect them from such vile and ugly treatment as being confined for committing crimes.

And I am prejudiced against felons, I don't want them in my neighborhood or around my children even though they are grown! (now if they prove themselves "rehabilitated" after a few years in public, I am willing to accept them back.)

Now if someone asks me, "Do you hate all blacks?" Of course not, the ones gainfully employed next to me and who are safe to be around I like. But it takes me a bit to figure out which is which!

And frankly, there have been a few who I was too anxious to trust and they proved that trust wrong--so I am a bit leery of all these days--including people as "white" as I am!

But sicko perverts like "an_old_friend", NO. I will always remain prejudiced to having such perverted people about me--my "pursuit of happiness" alone prevents this... they sicken me and I have the stones to say it!

Mark C Morgan, 17366 N River Rd, Chassell, MI 49916

There now. The Radio Amateur Callbook gives your address as a matter of public record. Are you being stalked?

Your alphabet soup postings are a matter of archived public record. Anyone can look them up. If someone quotes one of them, does that mean you're being stalked?

You've discussed your sexual orientation here and elsewhere. You've also discussed your masochistic bent and your Pagan religious views. Does that mean that you are being stalked?

> Conducting gay bassing is a hate crime
> but then you a guilty of all this yourself, but you are even man enough
> to admit it

Sounds like you're going after some unusual fish, Mark. If you meant "gay bashing", didn't you correct Steve and write that you aren't gay, but bisexual?

It is quite odd that you show up here after an absence of several years, with the same tired schtick and start to claim that you're being stalked. Your continued refusal to use a spell checker/grammar checker and your woeful ignorance of amateur radio regulations should be far more important concerns to you right now.

Dave K8MN

Not DIRECTLY related. :-) Look to the 56K modem that most folks
use to connect to the ISPs now. Those work over about a 3 KHz
bandwidth limit.

That 56K modem is capable of 56,000 bits per second. If that was
carried on an AM carrier, then it would require 112 KHz bandwidth
minimum. Using SSB techniques it would be 56 KHz bandwidth
minimum. Yet it works in THREE KILOHERTZ BANDWIDTH. HOW?

You are "in the engineering profession." You explain it to
yourself. Then you, as an amateur extra can explain it to
these other radio experts in here.

Here's a hint: Those 56K modems use a combination of amplitude
and phase modulation of a carrier...and do it at at least 8
discrete levels of amplitude and phase. Obviously it works.
All you need to do is rid yourself of the old AM double SB
concepts (even the SSB concepts) and look deeper.

John Carson of AT&T showed the basic mathematics for AM, PM, and
FM way back in 1915. All you need to do is work with some
basic series equations and solve the combination of AM and PM.
That sort of thing is done "in the engineering profession."
Where you are.

"300 Baud" (or 300 bits per second) is way slow by comparison.
Ordinary LSB AM of an audio carrier can do it within the 3 KHz
telco lines. Yet the 56K modems are wayyyyy faster.

Once, you, as "in the engineering profession," solve it, you
will have AN answer, one of several possibilities for

increasing throughput rate in a very limited bandwidth. Aid your ham compadres with your answer when you get done. Comprende?

de nada...

bit bit

> but bisexual?

yea I have corrected him but people are going on about may alledgedly
being gay

>

Becuase ole Stevie started out on his stalking and bashing as soon as I
return, indeed I have been checking the archives and he hardly stopped
with the bashing while I was gone

Stevie has started half a dozen threads making a point of my aledgely
being gay

it isn't and that is my choice I happen to think basic civil rights is
even more important

But again why should I care about HF regs

Nobody seem to answer that

Dave:

This guy picked up on his argument and has confused me with another "John Smith" (ok, I probably deserve it for picking the dumb name.) But, point is, he is like a tar pit and difficult to let go of once he has you "stuck."

He is very insistent on playing the part of a "victim."

Your words were very good, after reading them I wish I would have had the where-with-all to have said near the same.

However, now I am just embarrassed to have fallen prey to his stupid little "I am a bashed victim" game.

Please don't make the same error I did! He isn't worth it!

Warmest regards,
John

and another

Gays REALLY need to go somewhere else, if you are gay you ARE NOT
WELCOME HERE! GET LOST! TAKE YOUR QUEER BOY BUTT BUDDIES WITH YOU!

I am not a gay basher, gays just don't matter, however they do ruin
nice places--go somewhere with you gay buddies and don't make us ill
and feel like puking!

goodbye

Look, we've been through this before. I was interested in equipment design and construction, not operating it. I was planning on trying to market a 160 through 6 meter AM and SSB receiver I had designed when I was drafted. After I left the service I got home to find that my shop building had been damaged and torn down while I was in the army. All my notes, prototypes, parts and test equipment were gone. I didn't have the money to replace them at the time, and I had to find a job, buy a home and get on with my life. During my years of working in electronics I spent a lot of years working with RF. I was setting up a shop in my four car garage to have a place to work when i retire. The hurricanes last year soaked everything, and most of it is beyond salvage. I am 100% disabled and can't repair the roof.

You can think whatever you want. I had lost interest then, just like a number of licensed hams I know here in Florida. They haven't been on the air in years and most of them aren't bothering to renew their license when they expire. Are you going to bitch at them, too?

As far as movies, I have been to two movies since 1987, and I doubt that I will ever go back to a movie theater. My ears rang for three days from the excessively loud sound system, and I had a headache for a week.

I started the project below to keep myself busy a few hours a week, and to help others, rather than sit around and bitch about everyone else.

Mark, I don't "hate" you at all.

How can I "hate" someone I am laughing at so hard...?!?!

> > You have sex (per your own admission) with other men.
>
> realy? when?

Mark, you only make a bigger fool out of your self and
coincidentally prove my assertions that you're a liar by trying to
dodge and deny your alternative sexuality choices.

> > Ergo, you're gay.
>
> Nope not nessaryly idiot I could be gay or i could be BI

If your penis is invasive of other males, you are gay.

> > Where's the bigotry in calling you "gay" if you are indeed gay?
>
> It is in saying I can't post or tin harrassing me for it

Who said you can't post?

You're doing it, aren't you?

And what's "tin harrassing"...?

> > Or are you now withdrawing your claim of having sex with men?
>
> No nor am I confirming it either

You've already acknowledged that you do.

> It is none of your bussnes and has nothing to do with the ARS

It's "my bussnes" since you made a point of bringing it up in a public forum some several years ago. It's the "bussnes" of anyone who cares to read the old posts.

> in claiming it does YOUR prove yourself a bigot

In denying that you wrote what anyone who cares to research Google archives can see that you wrote proves you a liar.

Again...

Most of what you write about either has nothing to do with it either, or demonstrates such an absolute ignoprance of Amateur Radio practice or policy as to make one wonder from under what rock you crawled.

> And I don't say that they can't hate and laothe me if they like merely
> not harrass me for it

"Laothe" you...?!?! Turn you into a SE Asian...?!?!

And like I said...Who can hate anyone when they are laughing at them so robustly?

> BTW if some of these Basers could admit they were doing it would be an
> improvement

Well...I am operating a radio from a fixed point, so I guess that makes me a "baser"

> > What do you expect them to do? Roll over and go belly up simply because

>
> Basic civil rights

Which one of your "basic civil rights" has been denied you, Mark?

You post here freely, you choose to participate in a risque lifestyle, and to the best of my knowledge, not one burning cross of "hanged" effigy has shown up on your property as a result of it.

> > One can easily loathe these Liberals who think, erroneously, that their

You keep insisting that someone is "stalking" you.

Who is stalking you?

Prove it.

I say you're a bit over self-appreciating of your net worth...Who
would dare compromise their freedoms by stalking YOU...?!?!?!

No one here, myself or anyone else, has said you don't have a
"right to speak", Mark...

What we have ASKED you to do over and over and over is GET A
SPELLCHECKER!

> > > Conducting gay bassing is a hate crime

> even more important

"...it isn't..." what?

> But again why should I care about HF regs
>
> Nobody seem to answer that

You obviously don't.

You asked a question about the 60 meter allocations, and when Hans, K0HB gave you the precise information, you essentially slapped him in the face for the effort.

I'd say you don't care about "HF regs" at all. As for "why", you're right...neither I or anyone else can answer that. Only you can.

So why DON'T you care about "HF regs", and why should "we" care that you don't..?!?!

I understood him fine the first time...OF course I KNOW a bit
about Amateur rules and regulations, the focus of this forum byt the
way, so it was a "no brainer".

> > You can't do English any better than you could Serbo-Croatian.
>
> there is a lie, I Do English much better

No. You don't.

> > He answered your question exactly.
>
> no he did not answer it the question was about CW

He absolutely answered your question. Precisely. Accurately.
Civilly.

> > > I'd guess for your answer that Morse encoded Cw isn't allowed but you I

Well...You spelled all of the words correctly....Now if they were
just organized into a coherent sentence...

> > > > centered on 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz and 5405 kHz.
> >
> > Geeze, Markie...He gave you the specific mode AND frequencies
> > authorized.
>
> in gibberish

"Gibberish" to an idiot, perhaps.

Seems it's perfectly clear in Part 97.

So is this going to be another "rights" issue for you? Is the FCC
going to have to write a "Radio Rules for Dummies" book just for idiots
like you?

> > And then you don't even have the good courtesy to thank him.
>
> I rarely thank people when they are being discourtesous

Then why didn't you thank Hans for giving you the information you
requested?

He gave you the EXACT frequencies and modes authorized on 60
meters and did so without a single abrasive, discourtesous adjective or
suggestion.

> > Good thing you didn't ask about power limitations...he would've

So you just embarked on this mission to provide yet another
opportunity for us to make fun of you? Was it GOOD for you...?!?!

> (UNSNIP)...I also
> assumed it was 1.5 KW like the rest of the ARS, but then since i am not
> using the freqs it doesn't matter

(1) If you're not "using the freqs", why the inquiry in the first
place, and

(2) There you go assuming again.

Look at all the embarrassment you could have saved yourself if you
had just put "Part 97" into the search engine and read it for yourself.

And if you had problems with the emission designators, well,
that's on line and public information too.

Just like your address is.

Steve, K4YZ

> > Here only after Stevie brought it up
>
> Now how could I "bring up" your sexual orientation or religious
> affiliations if you hadn't brought them here, Mark?

By going out and looking for them, as you did about 5 years ago and
then you brought them up again when I reutrned to
the newsgroup

How you could do it is because i had always assumed that people were
biiger than you have shown you are

My Mistake I agree

>
> > > also discussed your masochistic bent and your Pagan religious views.

wrong simple lie on your part there has been plenty of folks saying
that

>
> What we have ASKED you to do over and over and over is GET A
> SPELLCHECKER!

you don't ask for a spellchecker by calling someone gay and sying gays
have no rights it doesn't work that way

>

> nothing "alleged" about it.

Stevie that doesn't make me gay. It might make me gay or it might make
me bi
or might mean I have been the victum of rape, or it might mean i was
just experimenting

in my case answer b is correct

I don't recall admiting to it, I simple have never diened it

>

> you're right...neither I or anyone else can answer that. Only you can.

why should I care at this point?

indeed you can (assuming you are not lying again) answer why you think
I should care about detail of HF regs

>
>
> So why DON'T you care about "HF regs", and why should "we" care
> that you don't..?!?!

Simple and obvious, as long as code testing coninues I can't legaly use
ham HF spectrum, therefore I don't care about
the details.

I can't tell you why care to point and go and on about something I
admit to

it is perfectly coherent and in exactly proper for spoken english,
which the from i use online as I have said before, again and again

And of course it is true Any standard of proof is higher than yours for
yourself

>

I'm not stalking you, Mark. YOU cane to this forum of your own
volition.

> > > And I don't say that they can't hate and laothe me if they like merely
> > > not harrass me for it
> >

> It is easy don't you know
>
> You obviously live in mortal dread that I might be "doing something"

Nope.

There's nothing you could do that would put me in "mortal dread"
for several reasons, the least of all being that I don't think you can
adequately focus your resources to actually "DO" anything that would
compromise my safety.

I, on the otherhand, have more than adequate resources to ensure my
safety, not the least of which is maintaining my situational awareness.

> > > Basic civil rights
> >
> > Which one of your "basic civil rights" has been denied you, Mark?
>
> Freedom of speech for one. Personal safety for another. the right to

Hmmmmmmmmmmm....You post here freely...

Not one scratch has beein inflicted upon you by anyone that >>I<<
am aware of...

And you have yet to show where ANYone from this forum has
threatened you.

> > You post here freely, you choose to participate in a risque
> > lifestyle, and to the best of my knowledge, not one burning cross of
> > "hanged" effigy has shown up on your property as a result of it.
>
> You know this how?

First of all, I "know" it because you are indeed posting here.

Secondly, YOU have stated that you participate in that alternative
lifestyle..Again, YOUR words...

Lastly, I said "...to the best of my knowledge..." In the English
language that means...well...It means EXACTLY what is says...

> > > > One can easily loathe these Liberals who think, erroneously, that their
> > >

> > > attention
> >
> > Do you read what you write before you hit "sned", Markie...?!?!
>
> yes I do. anyone calling me a liberal is plain nuts

Sure you're a liberal.

You acknowlege participating in an "alternative lifestyle" that
the political right is clearly against. You chose a religious
alternative that again the politcal right would scoff at, and lastly
you're "all about" demanding this "right" and that "right"...

Most conservatives >>I<< know would just shut up and get it done.

YOU are all about being a "victim".

> > > BUT one it is others that have engaged in stalking to find these
> > > "facts" andd then try to use them to silence me and others
> >
> > You keep insisting that someone is "stalking" you.
>
> You are now amoug others

How? By reciting stuff that YOU have published in public? By
referencing public records?

> > Who is stalking you?
>
> You

Then you've uttered a lie.

> > Prove it.
>
> You have for me

Nope.

You just like to throw that word around because it's a trip word
for victimization.

No one in this forum, to the best of my knowledge, is "stalking"
you.

> > I say you're a bit over self-appreciating of your net worth...Who
> > would dare compromise their freedoms by stalking YOU...?!?!?!
>
> Obviously you would, why I don't know, but you seem to stalk a number
> of folks on here, most anyone that dares disagree with you

And you've now utterd yet ANOTHER mistruth, Markie!

Why do you insist on lying so prolifically in a public forum,
Mark?

Steve, K4YZ

Your safety apearnetly in danger from Myself and Todd and Brain and
Lennie since you have to lie and harass and abuse us all, but you
missed the point as usual

it is your ego at stake and perhaps your belief in your manhood

>

No I don't, psting freely would mean that I was able to post without
being threatened (free people can it seems)

>
> Not one scratch has beein inflicted upon you by anyone that >>I<<

sure as I have said and in your case by ferreting out my call sign so
other could do the rest.

By going out and hunting for stuff yuo disaprove of to bring to These
newsgroups

>

No I don't

but it fits

You have clearly stalked Todd, and harassed him sexual harassed him for
that matter and brain and myself

>
> No one in this forum, to the best of my knowledge, is "stalking"
> you.

Maybe to best of your knowledge since of course you don't know what you
are doing
>

Nope I haven't utterd anything

and You stalked and sexualy harass other men.

>
> Why do you insist on lying so prolifically in a public forum,

> Mark?

I am not lying

and if I were why do you care so much?

Honesty is not a legal requirement here, indeed I admit to lying heand
there. Wh do you keep beating that dead equine

Lying isn't a crime.

you lie all the time why don't you turn yourself in

>
> By going out and looking for them, as you did about 5 years ago and
> then you brought them up again when I reutrned to
> the newsgroup

Mark, here's a couple of newsgroup publishing tips:

(1) Don't lie. This stuff's all archived and your assertions
about who-did-what-to-whom is all in there.

(2) Don't admit to or suggest an idea of personal preference in a
public forum if you don't want it to be a matter of public record.

You have admitted to lying about being a commissioned officer in
the Armed Forces. You have insisted that you were "drafted" when it
was clearly impossible to have been so...You admit to having chosen an
"alternative lifestyle" and participating in a non-mainstream religious
sect.

Then you claim others are "stalking" you when they recite what YOU
have said.

That's not stalking.

> How you could do it is because i had always assumed that people were
> biiger than you have shown you are

If you have personal information that you don't want made public,
don't discuss it in public!

It really is THAT simple!

> My Mistake I agree

I agree that your mistakes are plentiful and hillarious.

> > > > also discussed your masochistic bent and your Pagan religious views.
> > > > Does that mean that you are being stalked?
> > >
> > > No what means i being stalked is people going on and and saying I lack
> > > the right to speak becuase I am different
> >
> > No one here, myself or anyone else, has said you don't have a
> > "right to speak", Mark...
>
> wrong simple lie on your part there has been plenty of folks saying
> that

I can "say" the moon is red and that the Earth is flat...it won't
stop anyone else from knowing better.

Who then has tied you down, gagged you, and dared you to
speak...?!?!

Wait...that sounds like something you might LIKE...

Never mind...I don't want to know...

> > What we have ASKED you to do over and over and over is GET A
> > SPELLCHECKER!
>
> you don't ask for a spellchecker by calling someone gay and sying gays
> have no rights it doesn't work that way

No...

I ask you to use a spellchecker by saying "GET A SPELLCHECKER!"

> > You have sex with men. You've admitted it before. There's
> > nothing "alleged" about it.
>
> Stevie that doesn't make me gay.

Sure it does.

> It might make me gay or it might make me bi

It DOES make you gay.

> or might mean I have been the victum of rape

No one is "gay" because they were raped. It means they were
raped. Period.

> or it might mean i was just experimenting

Trying to find a partner that wouldn't laugh you out of the
bedroom...?!?!

> in my case answer b is correct
>
> I don't recall admiting to it, I simple have never diened it

You have "admitted" to it. No denial is necessary, unless you are

> > I'm not "bashing" you...I am making fun of you becasue you make it
> > so easy to do.
>
> Making fun of me becuase i am Bi is bashing

I am not making fun of you because you are gay...I make fun of you
because you're such an idiot...

> > > Stevie has started half a dozen threads making a point of my aledgely
> > > being gay
> >
> > You have sex with men. You've admitted it before. There's
> > nothing "alleged" about it.
>
> and this has what to do with Ham radio?

Nothing. Which beings me to ask why you ever brought it to RRAP
in the first place.

> > > it isn't and that is my choice I happen to think basic civil rights is
> > > even more important
> >
> > "...it isn't..." what?

> > him in the face for the effort.
>
> No he didn't answer my question

You're lying.

He answered your qeustion precisely.

> > I'd say you don't care about "HF regs" at all. As for "why",
> > you're right...neither I or anyone else can answer that. Only you can.

>
> why should I care at this point?

Absolutely. And who here do you think CARES if you care...?!?!

> indeed you can (assuming you are not lying again) answer why you think
> I should care about detail of HF regs

You obviously don't care enough to do a few minutes research on
your own.

> > So why DON'T you care about "HF regs", and why should "we" care
> > that you don't..?!?!
>
> Simple and obvious, as long as code testing coninues I can't legaly use
> ham HF spectrum, therefore I don't care about
> the details.

You're lying again.

You speicifically ASKED for details on regulatory matters
pertainig to an Amateur HF allocation.

> I can't tell you why care to point and go and on about something I
> admit to

And I can't tell you what you just said, but I CAN tell you it was
incomprehensible as a coherent sentence.

> GIGO
> >
> Must you rant and rave so much

You're the ranter and raver here, Mark.

You asked a question requiring specific information.

That question was answered, but then you insulted and demeaned the
person who provided it just becasue YOU are a feeble minded idiot.

GIGO doesn't apply. You were given the right information. You
simply were (and remain)too stupid to understand it.

> > > > And then you don't even have the good courtesy to thank him.

Then you are without question or consideration an absolute liar.

He gave you the specific frequencies allowed and the mode allowed
on them. Simply saying "single side band" is not completely accurate.

> > He gave you the EXACT frequencies and modes authorized on 60
> > meters and did so without a single abrasive, discourtesous adjective or
> > suggestion.
> >
> he did not answer the question he rudely choose to answer a different
> question

Then you are without question or consideration an absolute liar.

He gave you the specific frequencies allowed and the mode allowed
on them. Simply saying "single side band" is not completely accurate.

> No one asked for freqs no asked about any mode beside CW

Just admit you were too stupid to understand and to narrowminded
to take a second to process what was given you.

You reacted the way ALL spolied brats do.

> > So you just embarked on this mission to provide yet another

> has forbidden on a band that requires a CW test for use

FCC regulations require Morse Code competency for ANY Amateur
operating on ANY frequency below 30Mhz.
>
> I care about CW testing surely you have noticed

No...You care about getting as much as you can with as little
effort expended.

You proved that years ago.

> > (2) There you go assuming again.
> >
> > Look at all the embarrassment you could have saved yourself if you
> > had just put "Part 97" into the search engine and read it for yourself.
>
> Bull#####
>
> A simple yes no instaed of reading through mind numbing legalese

It was only mind numbing to you...Mind numbing because you were
either too stupid or too ignorant to understand it.

I say "stupid or ignorant" because you immeidately made a fool out
of yourself over the answer instead of doing two minutes worth of
research.

Nothing we didn't expect.

Steve, K4YZ

I did, Hans.

The embarrasment of looking like a fool for having acted the way
he did when you gave him the exact information he asked for.

Absolutely will not happen, guaranteed.

> Alun says the 'phone segment starts at 7050 under that plan. Which

CW + digital from 7.000 to 7.100, phone and image from 7.100 to 7.300
and call it a day.

> The spectrum-efficient modes are sacrificed to the spectrum-wasters.

I don't support the notion that there should be "reward allocations"
for spectrum efficiency because that can be twisted around and used as
a rationale for reducing the space allocated to efficient modes. The
better idea would be to keep the hard stops in place on their lower
limits and let them clean up their QRM problems by cleaning up their
modes & operations. The nonsense about narrow mode users giving up
space to "accomodate" the results of junk modes like "hi-fi SSB" and
overcompression and such really boils my oil. Let 'em sort it out their
sandbox and stay away from our sandbox, they do it to themselves, let
'em deal with it.

> "From each according to his [spectrum] ability, to each according to

> their own?

On MF/HF it's all compulsive, ignorable micromanaging by amateurs, an approach which has failed miserably in any number of fields. The FCC is the law, they're the professionals, they're not ignorable and their "bandplans" work just fine.

You asked about HF regs when you inquired about the 60M band.

If you ask, I assume you cared, so I answered the question in straightforward language directly from the applicable FCC regulation.

If you didn't care about HF regs, you shouldn't have asked a question about HF regs. I'll be careful not to answer any more of your questions.

Not realy that I recall

BTW even being Gay or Bi doesn't mean you have have had sex with a man.

You assume a great deal

>
> > > I'm not "bashing" you...I am making fun of you becasue you make it

Mike:

I just did better than that, I have given you enough rope until you have gone on and proved yourself an "argumentive nut."

Do a google, somewhere out there others have duplicated the work, I am sure, it just isn't that easy to come up with something all that original. Someone else has done it and probably created a webpage about it. I came here for personal pleasure, and you are NOT my idea of it...

I will let others now tell you why this can be done easily, I have run out of patience with you.

Besides that, I have seen your type before, after someone practically builds one and sticks it in your hand, you turn around to the world and claim you "invented" it, I see you coming... ROFLOL

You are a broken record of "it's impossible!" Suck it up man, it ain't!

Now what fool would build a radio like that? Manufacturers are out to make a buck, else they eventually disappear... if they spend their money attempting to champion "control freak hams" they can't be competitive in the market!

Besides, what ham worth his 2+KW rf signal doesn't have a full coverage communications transceiver with all the xmit blocked freqs removed and the radio "opened up?" Yet is quick to point a finger over at a CB'er...

And, unless you pot the whole damn thing in epoxy, what would ever make it "locked up tight?"

There nothing "secrat" about you, Mark.

You're a known functioanlly illiterate pathological liar who's now
admitted to being the liar I claimed he was...

...and it's not even my birthday!

> > > (UNSNIP)...that you carry on this

There's absolutely NOTHING funny about seeing an adult act the
way you do in public, Mark...Kinda sickening, actually.

> > Just wading through the abortion of writing that you dare call
> > English proves it.
>
> MY english has nothing to with it

Sure it does. To call what you write "English" might be enough to
get the real English to start a war over it....

> That you think it serves as proof of your standards of prrove is
> eveidence of just how low those standards are.
>
> (now wating foryour pretend you didn't understand

And just "wat" are you wating for me to prrove"...?!?!

You manage to get sentences out there, Mark, no doubt...However
it's not without a lot of work and imagination.

I've taken care of 5 year olds with better sentence construction
than you.

> > You refuse to do those things that would demonstrate that you are

> TWO lieing in claiming you know much about what I do

I don't have to go ANY FARTHER than the chair I am presently
reclining in to see EXACTLY what I claimed in the above is true,
Mark...You're doing NOTHING to improve yourself.

You refuse to use $10 worth of technology to clean up the "dreck"
you insist is "coherent English" here, and you act like a five year
old.

> > Your "standards" are lies and deceit wrapped around ignorance and
> > functional illiteracy.
>
> Dysgarphia, you lying Sack of ####

Nope.

You refuse to fix it. You've been told that your "writing" is
crap and that half of what you write is unintelligigble.

The technology exists to fix it. You refuse.

> > > > Brain insisted that I was never in MARS and know nothing about it.

> $ such have made in getting to this point in this post

Huh? What? Made what getting where?

> > You and he claim I don't give specifics.
>
> Lie I claim you did not give proof, Brain's claims are his own affair

I did give proof. Information that any idiot could follow to
logical conclusion.

If I get arrested and the cops say "Where were you at 5PM and I
say "Joe's Bar", I don't have to produce a receipt...Just third parties
who can corroborate that I was indeed there.

Brain was given MORE than adequate information to answer his
questions.

He was just embarrssed to get the answers becasue he knew that I
wouldn't give him them knowing that the person on the other end of the
line would tell him what I've been saying all along.

> so above are 2 lies.
>
> One that I claim you did not give specifics

I did give specifics, so you are the liar.

> Two that Brain and I ask for the same thing

I bet you and Brain DO ask for the same thing. Just not in
public.

> > There's proof in this very forum that that assertion is a lie.
>
> which assertion? the one you made up

I've not "made up" any assertion.

> > > > Then he said, "Oh, I need "DOCUMENTATION".
> > >
> > > And you did not provide it
> >
> > Sure I did.
>
> where?

When I gave him all the specifics pertaining to his questions.
All he had to do was copy them off and "make the calls".

He didn't do it. He's a coward. Just like you.

> > > > Whelp, he's got far more information to verify MY claims than any

>
> your words not mine

But you two ARE "in bed" together...We've seen evidence of it in
this forum.

So why would it be such a stretch to see it eally happen?

> > > (UNSNIP)...Not in position to say what you made up vs
> > > what you distorted beyond all reason w.r.t. Brain Idon't eneough about
> > > him
> >
> > Huh?
>
> OF course it make no sense if you snip it out of context
>
> another of your distrotions

Snip what out of context? It was trash in the first place.

And it's "d i s t o r t i o n s", Mark. If you're going to allege
a distortion, at least spell THAT right, OK...?!?!

> > > > Even YOU have the resources to verify anything I've ever said in
> > > > this forum except that I won't discuss my combat service in the Corps.

Do you have a computer tied to the Internet, Mark?

Does it have a search engine?

Then you have the resources I said you have.

> > You have the resources.
>
> nope

Yep.

> principle lack is of course the time to spend chasing your BS

It's not BS.

It's facts.

Now...let's get down to what you REALLY don't have...that's
INITIATIVE.

In THAT regard I could agree with you.

> > What you DON'T ahve is either the guts to use them OR you really
> > are as ignorant as I have supposed and don't realize that you have
> > them.
>
> One your spelling is slipping

Let's see...A 1 in 500 transpostion of letters as opposed to your
EVERY SENTENCE errors...

> Two, It sin't...(SNIP)

See what I mean...

> (UNSNIP)... a matter of guts, it is a matter of caring. I don't if
> served at all. I'd rather beleive you did not, but I suspect you have,
> you show enough signs of service brain washing something my own mind
> never took to, thank the gods, that it is likely true

WTF did you just say...?!?!?!?!?!?!?!

> Three you seem to want people to beleive YOUR claims so you need to
> carry the freight

"Carry the freight"...??!?! Why? I am an ER Nurse, not a FedEx
delivery guy.

As for any information I have, well, I answered the questions
asked.

Now...if BRAIN would just answer the ones that have been put to
him for YEARS.....

> > > (UNSNIP)...not without digging for them
> > > at best, and to say I might be able to dig out of yoour lies and
> > > obfucations the data is being generous in assuimng that your aren't
> > > lying win saying I can.
> >
> > There's nothing for ME to "dig out of", Mark.
>
> If there is nothing to dig out then I lack the resources to verfy your
> claims

You obviously have a computer tied to the Internet, blockhead.

> > I've not lied about anything.
>
> you sure have

Nope.

> again
>
> Re: I Stand Corrected On N9OGL/KB9RQZ Wedding...It's N0IMD/KB9RQZ...
>
> your words and another lie

There's a difference between sarcasm and lying.

Again, you can't seperate the two, which makes you even more
idiotic appearing.

> > And you're right about ONE thing...ME granting that YOU can "do"
> > something >>IS<< being generous.
>
> another lie and an easy one. You know I can do something therefore it
> is not generous of you to admit that

Allow me to correct myself then...

It's generous for me to grant that you can do something CORRECTLY.

> > > But I digress it is not MY job to prove YOUR Claims. It is not Brain or
> > > Lennies Job either. They are YOUR claims YOU back em up
> >
> > I've already given the dates, times, places, callsigns, etc.
>
> Not that I have found

That's because you're an idiot, Mark.

Even Brain has admitted that the data was put here before him.

He just refuses to accept it.

That doesn't make it any less factual. It just makes him that
much more cowardly to verify it.

> so
>
> But (again) I digress it is not MY job to prove YOUR Claims. It is not
> Brain or Lennies Job either. They are YOUR claims YOU back em up

I did.

I gave specific dates, times, locations, callsigns, etc.

> > > As your Claims of comabt if memory serves (and it may not) you claims
> > > to have served under a General with REALLY big ego problems (to go with

> > > presuming that YOU can dictate how people use the english language
> >

> > It's absolutely NOT a "distortion".
>
> Yes it is a distortion

No, It's not.

YOU said you were drafted.

According to the age that was once on your QRZ listing, you would
have only been 8 or 9 when the draft ended.

> > You claimed you were drafted.
>
> yes indeed, but I was using the words in a different sense than you

Then you were being deceitful.

There's only one "sense" when applied to military service, and
"drafted" means the non-volunteer conscripting into military service.

> > You claimed you were a field grade officer.
> >
> > You then claimed you were a company grade officer.
>
> yep you got those 2 right

I got is ALL right.

You lied. You've BEEN lying.

> > You followed that up by claiming that your "comandig oficer"
> > refused to release you from active duty becasue your MOS was so
> > "critcal"
>
> Never said anything about my "comandig oficer" never had one

Then you've lied again.

There's one and ONLY one military person in the United States who
has no "commanding officer"...that's the Chairman of the Joint Chiefs
of Staff..That's becasue he only answers to the President of the United
States.

> And never said anything about refusing to discharge me form ACTIVE duty
> at all
> you just assumed it

No.

You said it.

> > I did some digging and found...
> >
> > ...nothing. You never served a day in the Armed Forces of the
> > United States as either Enlisted or Officer, Active, Reserve or Guard.

>
> You found this with my precise name Social secruity numberor address.
> my my

I didn't need it.

Going back to 1935, there was only three "Mark C Morgan" who had
served as of my research on you (1997). All were born in the 1930's or
40's.

> You even claimed that there was Nobody name Mark Morgan ever in the
> Army

No, I didn't.

I claimed there was no Mark C Morgan who could have been you. Not
at your presently claimed age, anyway...

> > When I bust THAT bubble you tried the "I was using a fake name"
> > routine.
>
> not exactly but that is closer than you normaly get

It's right on the money, as is just about everything I get with
you, getting as close as your abuse of the language will let me get.

> > Let's just face it...
> >
> > Mrs Mark C Morgan is married to a chronic liar.
>
> yes my partner is, my partnar knows that, and my partner is gald I lie
> well enough that a jerk like can't find me

I know where you are, Markie...Close enough to find you within an
hour if I ever found myself in Michigan and looking for a good laugh.

> > Huge snip of Markie trash.....................
> >
> > > > Guess you ought to look at QRZ and see how my name's spelled,

"Harrassment"..???

Citing public records is harrassment?

Big snip.

> > Do you even KNOW the defintion of "stalking"..?!?!
> >
> > yes I do

Obviously another one of your admitted lies, Mark, because the
evidence shows otherwise.

More snip.

> > Mark, here's a couple of newsgroup publishing tips:
> > >
> > > (1) Don't lie. This stuff's all archived and your assertions

There you go again with insisting that I have asserted a religious
preference.

I haven't

> > Then you claim others are "stalking" you when they recite what YOU
> > have said.
>
> when done with the clear prupsoe to harrass it is stalker abd
> harassment

And again you demonstrate a complete ignroance of what a "stalker"
is.

> > That's not stalking.
>
> yes it is

Nope.

> > > How you could do it is because i had always assumed that people were
> > > biiger than you have shown you are
> >
> > If you have personal information that you don't want made public,
> > don't discuss it in public!
>
> Stevie I don't mind it being known.

Obviously you do since this it the fourth lengthy rebuttal in as
many different threads that you've made in the last 12 hours.

> what I would like is not to deal with sex in Ham Radio.

If you and a consenting partner can climb into that little box,
have at it.

> it isn't relavant. and making your every post
> about it is stalking and sexual harassment

Then why'd you being your sexual preferences into RRAP in the
first place?

> > It really is THAT simple!
>
> Why does your trollish mind insist on discusiing nothing but sex?

It's not about sex.

It's about you making a fool out of yourself in a public forum.

> > > My Mistake I agree
> >
> > I agree that your mistakes are plentiful and hillarious.
>
> and you lie By way of distroing the context again

"...distroing" WHAT "context"..?!?!

> > I can "say" the moon is red and that the Earth is flat...it won't
> > stop anyone else from knowing better.
>
> Bull##### like most of your dreck

Really?

So if I say the moon is red and the Earth is flat, that't is, huh?
End of story?

> > Who then has tied you down, gagged you, and dared you to
> > speak...?!?!
>
> No such claim another Stevie lie

It's not a claim. Mark. It was a question. YOU said someone is
preventing you from keeping you from speaking. Obviously no one in
THIS forum is since you spew liberally...

And I might point out liberally in several NG's until I cut them
from the address bar.

> > Wait...that sounds like something you might LIKE...
>
> Not into rape Stevie, and more of sexual harassment

But YOU are claiming someone is keeping you from "speaking".

Obviously they could only do that with force since you are
"speaking" liberally herein.

So who's keeping you from "speaking", Mark?

> > Never mind...I don't want to know...
>
> then why type it out

Why not?

> > > > What we have ASKED you to do over and over and over is GET A

> >
> > I ask you to use a spellchecker by saying "GET A SPELLCHECKER!"
>
> then why are you talking about above about having sex with men

The question is why are YOU talking about having sex with men.

> > > > You have sex with men. You've admitted it before. There's
> > > > nothing "alleged" about it.
> > >
> > > Stevie that doesn't make me gay.
> >
> > Sure it does.
>
> nope nor is it asking me to use a spellchecker

Two seperate issues.

You are gay and you don't use a spellchecker.

> > > It might make me gay or it might make me bi
> >
> > It DOES make you gay.
>
> nope Nursie goo check with a Doctor or a refference book

You are male and have sex with men.

Gay.

> > > or might mean I have been the victum of rape
> >
> > No one is "gay" because they were raped. It means they were
> > raped. Period.
>
> Indeed but you claim everyone who has had sex with aman is gay, I point
> our another possiblity

"Gay" is a lifestyle choice.

Rape is an act of violence

> > > or it might mean i was just experimenting
> >
> > Trying to find a partner that wouldn't laugh you out of the
> > bedroom...?!?!
>
> Your point

My point is I've seen your face.

> > > in my case answer b is correct
> > >
> > > I don't recall admiting to it, I simple have never diened it
> >
> > You have "admitted" to it. No denial is necessary, unless you are
> > now saying that you were lyining about it before...?!?!
>
> Not realy that I recall

Then your recollection is faulty.

> BTW even being Gay or Bi doesn't mean you have have had sex with a man.

But YOU have admitted it.

> You assume a great deal

I don't have to "assume" anything when YOU volunteer answers,
Mark.

> > > > I'm not "bashing" you...I am making fun of you becasue you make it
> > > > so easy to do.
> > >
> > > Making fun of me becuase i am Bi is bashing
> >
> > I am not making fun of you because you are gay...I make fun of you
> > because you're such an idiot...
>
> then if true why do you bring up sexuality?

I didn't. You did. Years ago. I just enjoy rubbing your nose in
it.

> It is YOUR doing

Nope.

Yours.

If you don't want to discuss such things, just don't discuss them.
Don't bring them up in a public forum...

And lastly...

Don't utter such obvious lies and mistruths that mandate
re-demonstrating your past performances with "truth", Mark...Or your
predeliction for telling tall tales...COLONEL...

> > > > > Stevie has started half a dozen threads making a point of my aledgely
> > > > > being gay
> > > >
> > > > You have sex with men. You've admitted it before. There's
> > > > nothing "alleged" about it.
> > >

> > > and this has what to do with Ham radio?
> >
> > Nothing. Which beings me to ask why you ever brought it to RRAP
> > in the first place.
>
> Lying sack of #### you did

Nope.

I never would have had a clue had you not brought it in first.

You flatter yourself if you think you were (are?) worth the effort
to "research"...

> > > > > it isn't and that is my choice I happen to think basic civil rights is
> > > > > even more important
> > > >
> > > > "...it isn't..." what?
> > >
> > > after you hack away at something I can't put it back
> >
> > Hack away at what?
>
> when you cut away the context

What context?

No one's denied you your civil rights.

The fact that we are engaged in this conversation is proof of
that.

> > Put what back?
>
> I don't know what you cut away you did it

Hans answered your question precisely.

> > He answered your question precisely.
>
> No he did not

Regardless of how many times you insist that he didn't, Mark, the
TRUTH is that he did.

Perhaps if he'd done this:

(Written in crayons of various colours): "Markie no taptap on
5Mhz...Only talktalk"....

Would that have been more to your understanding or educational
level?

> > > > I'd say you don't care about "HF regs" at all. As for "why",
> > > > you're right...neither I or anyone else can answer that. Only you can.
> > >
> > > why should I care at this point?
> >
> > Absolutely. And who here do you think CARES if you care...?!?!
>
> You carely do troll, or youd not keep going and on about it

You're the one making an issue of what you care or don't care
about, Mark.

I just remark on Mark.

> > > indeed you can (assuming you are not lying again) answer why you think
> > > I should care about detail of HF regs
> >
> > You obviously don't care enough to do a few minutes research on
> > your own.
>
> I did such resaerch.

Obviously not or you wouldn't have had to ask here, nor would you
have "dissed" Hans the way you did.

> Now you want to decide HOW a my do my reasreach

Nope. I just want you to do some.

> > > > So why DON'T you care about "HF regs", and why should "we" care
> > > > that you don't..?!?!
> > > >

> > > > ham HF spectrum, therefore I don't care about
> > > > the details.
> > >
> > > You're lying again.
> >
> > Wrong

Not wrong, or you wouldn't be so miffed about not being able to
get there.

> > You speicifically ASKED for details on regulatory matters
> > pertainig to an Amateur HF allocation.
> >
> Yes So I don't care about the details now you are saying I do? make up
> your mind...ah no wait that is my mistake assuming you have one to make
> up

You're the one with the mind to make up, Mark.

You ask about authorised modes for a band you can't legally
operate on, but then you wench and whine about being able to operate
there...

So which way is it...You care or you don't?

> > > I can't tell you why care to point and go and on about something I
> > > admit to
> > >
> > > And I can't tell you what you just said, but I CAN tell you it was

He didn't take anything "out of context".

You asked a specific question, he gave a specific and technically
accurate answer.

> > You asked about HF regs when you inquired about the 60M band.
>
> again context

So...Telling you what modes are authorized on the 60M band in
response to your question about modes was "out of context"...?!?!?

> > If you ask, I assume you cared, so I answered the question in straightforward
> > language directly from the applicable FCC regulation.
>
> J8f9lk5
>
> Is no more straight forward than your answer

Then you are without question or consideration an absolute liar.

He gave you the specific frequencies allowed and the mode allowed
on them. Simply saying "single side band" is not completely accurate.

> > If you didn't care about HF regs, you shouldn't have asked a question about HF
> > regs. I'll be careful not to answer any more of your questions.
>
> Please hold to that. or try answering the question asked which was a
> simple yes/no question instaed of some other question

Yes, Hans...Heaven forbid we confuse this idiot with facts!

Mark's a "Technician" who can't handle "technical" answers.

Steve, K4YZ

I figured this out, this is Mac Amateur World! Kind of similar to Mac Donalds World.

Oh look, there is the Mac 'Tenna--invented my amateurs. There is the Mac Radio--invented by Mac Amateurs. There is the "Mac Amateur Desk" invented by amateurs and, the Mac Chair....

Ohh my gawd, I have only heard about it!!! There is the Mac Internet invented by Mac Amateurs with a Mac WebCam hooked up and running a Mac Operating System (probably true, I expect this bunch to run Macintoshes!!!) And, those are real Mac Applications running on it (probably true again.) With a Mac Mouse, Mac Keyboard and Mac Monitor (sad, but probably true again.)

And over there!!! A Mac Data Compaction algorithm invented by the original "Mac Amateur", how exciting!

Yeppers! A real "Mac World" out there!

It's not a personal attack, Mark. It's a professional
observation.

You have a problem with English. You're not very proficient at
it.

> crying cut for formating improvements

Snipped more embarrassing stuff, you mean...

not a question about alph numeric mode codes in my question pool

The only even mention was mode A1A Morse encoded CW, and that was only
as an aside in Gordon book that I used to prepare for it

and No suchare even mention in the current Tech pool

If you think it should you shouldaddress your coments to the NVEC

>
> > crying cut for formating improvements

Nope.

Mark C. Morgan is a liar.

You've said so yourself this very day.

And you've done it again right here.

> > He gave you the specific frequencies allowed and the mode allowed
> > on them. Simply saying "single side band" is not completely accurate.
>
> but it had nothing to do with the question ASKED neither uper or lower
> and single sideaband is CW whci was the question

He gave you the specific data on authorized mode for those
channels.

Nothing more...nothing less...

To insist otherwise is to further prove yourself a liar, Mark.

And haven't you done that enough today...???

My selg?
But you lie I never insinulated your father was a thief I stated quite
plainly that one of your
male forefathers was a thief

Roberson or robeson are coruptions of RobberSon look it up in the work
of the Brothers Grim

rel=plying

BTW I agree I was direspectful, however respect has to be earned

well anything you call foolish. Geewhy do I think of a quote of acting
Pres Walken(west wing) anything that pisses off the arab s must be
about right. Something you think is foolish must be about right

>

it is no more straight forward than what he gave.

It also wasn't answer to the question asked

>
> Mark C. Morgan is a liar.
>
> You've said so yourself this very day.

yes your point.

You are also a liar, just not man enough to admit it (or is it not
smart enough to know)
>
> And you've done it again right here.

yes

why do you insist on beating long dead equines?

>

not a question about alph numeric mode codes in my question pool

The only even mention was mode A1A Morse encoded CW, and that was only
as an aside in Gordon book that I used to prepare for it

and No suchare even mention in the current Tech pool

If you think it should you shouldaddress your coments to the NVEC

>
> > crying cut for formating improvements

Well he amswered some OTHER question not mine and not one tht had been
asked

>
> > well then Hoist you idiot
>
> Huh...?!?!
>
> "Hoist you"...?!?!

yes aren't well enough educated

>
> Some gay pagan salute?

Nope

and more of your gaybashing

more of your pagan bashing
>
> Steve, K4YZ

I hate to see this thread continue; perhaps I can shed some light on it.

"2K8J3E" is broken down into two parts. 2K8 and J3E.

Years ago, A1 was CW. F3 was FM. A3 was AM. Well, they clarified the
emission types to indicate whether a signal was single sideband, double
sideband, independent sidebands and whether the carrier was suppressed,
reduced, or full carrier.

J3E refers to the emission type. I have a strong suspicion that 2K8
represents a 2.8 kilohertz bandwidth.

We often refer to single sideband, fm, cw, or whatever. The nomenclature
that Steve put forth is a formal one that pins down the emission type and
bandwidth much more clearly than saying something like "FM". FM, as you
might be aware, comes in a number of flavors. Narrowband FM has become even
narrower in recent years; however, commercial broadcasting FM is much wider
(and often has a subcarrier present too. They have stereo as well as
secondary transmissions (perhaps Muzak) as well).

So Steve may have been a little strong in his wording, but his conclusion
was not in error. You appear to have little knowledge of emission

types/bandwidth occupancy.

Not slamming you, but Steve was not entirely remiss in his post.

73 from Rochester, NY

I have seen fragment of this but in my reading of way part 97 recently
I don't recall it

>
> J3E refers to the emission type. I have a strong suspicion that 2K8

you may well be right but even you don't know, not a slame on you but
pointing that you clearly know better than are not sure how can I be
expected to know it

>
> We often refer to single sideband, fm, cw, or whatever. The nomenclature

Corecting you Hans put it forth, Steve is taking me to task for not
knowing it

> bandwidth much more clearly than saying something like "FM". FM, as you
> might be aware, comes in a number of flavors. Narrowband FM has become even

frankly wasn't realy aware if you mean it it has defined subset like FM
2 khz wide (realy narrow if it can even get that narrow) FM 30MHz wide
(which is used in some gunnplexer mircowave gear)

> narrower in recent years; however, commercial broadcasting FM is much wider
> (and often has a subcarrier present too. They have stereo as well as
> secondary transmissions (perhaps Muzak) as well).

secondary trans I think i know about a modualted signal carried like
the pl tone we use on repeaters

>
> So Steve may have been a little strong in his wording, but his conclusion
> was not in error. You appear to have little knowledge of emission
> types/bandwidth occupancy.

Agreed
and Steve and for that Hans know this and choose to give an answer
technical correct (is it in fact technicaly correct) but dsigned to be
useless to me

>
> Not slamming you, but Steve was not entirely remiss in his post.

I accept thatyou intend no slam but I miss you have missed Stevies
intent

> only goes 2.5K each side of center frequency??????????

Of course it can.

The question is whether the RF path will have characteristics
comparable to those of the telephone line.

> Are you NOT imposing an audio frequency of AT LEAST a 5K bandwidth on
> the rf carrier with normal speech?

No. Typical ham transceivers only need about 2.5 kHz of audio
bandwidth.

> (actually, most quality
> transceivers have a wider audio bandwidth than this which can be set
> +/-) and if you agree you are indeed, how can you argue that 5K
> bandwidth can carry a 56K data rate over a phone line--and NOT a hf rf
> signal???? That looks insane to me?

It's a question of the characteristics of the RF path. Certainly there
are some paths that will support the amplitude- and phase- stable
requirements of the 56K modem - and some paths that won't.

On top of that is the fact that most RF paths aren't full duplex. How
fast is the 56K modem in half-duplex with transmit-receive switching?
>

You are. Do you think HF offers the same transmission characteristics
as a telephone line?

> You know, I have not even looked to see on the web, but aren't tons of
> people doing this right now as we newsgroup?

On telephone wires or HF radio?
>

>with current technology.

I've seen live, streaming video on my computer years ago, all
working through ONLY the 3 KHz bandwidth of my single telephone
line. There ARE thousands of examples. Today.

> He does not however tell us how.

This newsgroup does not support binaries with the attendant
schematics, simplified diagrams, equations, etc., etc., etc.
There are dozens of BOOKS available "in the engineering
profession" (as well as purchaseable from Amazon.com) on the
subject.

> He just chatters
>on about "compressing it enough" without stating the degree of compression,
>etc.

"In the engineering profession" (where I've been for decades)
lots of Design Reviews had "chatting." They also had arguments,
sometimes heated, where one would adamantly REFUSE to believe
in an explanation...! Senior type, titled, etc., etc., etc.
[several anecdotes could be inserted here but I digress...]
Sound familiar? :-)

INFORMATION compression is going on all the time in nearly ALL communications media. [I use "information" rather than "data" to avoid the emotional baggage associated with "lesser" forms of amateur communications, "lesser" relative to the epitome of all amateur radio modes (morse code).

Most wired telephone calls are digitized, compressed, re-expanded on circuits to distant central offices. Modems operating on telco lines (limited bandwidth of about 3 KHz) do it locally. Webcams - at the arbitrary Coslo standard of 7 frames per second or faster or slower - do that over the same telco bandwidth. Wired telemetry of many and varied forms coupled through telco circuits do that. All of those operate in bandwidths almost exactly that of an amateur SSB voice circuit.

>Hey I'm all for the "eureka" when it happens but the problem is that it is
>unpredictable.

Do you wish for EXACT dates of miracles? Scheduled epiphanies? :-)

Or aren't you just being snarly for the purposes of winning message points for yourself in this newsgroup?

> Not only is it unpredictable in time but in the nature of
>the breakthrough.

How can you say that, given that you are "in the engineering profession?" Have you given up reading of the breakthroughs in recent history of the "engineering profession?" They are many.

A retrospective:

1. Ed Armstrong was told his FM system won't ever be as good as good old, practical, used-every-day AM (then all of a bit over a decade old) and that he should give up. FM broadcasting got very practical...evolved not only to binaural ("stereo") sound (compatible with monaural) but also to carry an isolated, independent sound circuit (such as "storecast"). It works.

2. Mobile FM was described as impractical, wouldn't work as good as AM, but Link and Motorola said phooey to that and proved it was good, beginning with police department two-way radios prior to WW2. The U.S. military saw that, said great, lets do that for everything from backpack walkie-talkies to tank radios. It works.

3. Single Sideband Suppressed Carrier modulation is inefficient, impractical, too costly, too complex for amateur radio use said the olde-tyme hamme old-fahrts. "You can't get me to believe it works!" said many in private. It's now standard voice on HF. It works.

4. You can't make an active amplifying device without vacuum or gas said the olde-tyme tube makers. Three guys at Bell Labs

showed them different back in 1948, eventually won a Nobel Prize. A new hire at Texas Instruments, not allowed a company vacation, made the first integrated circuit during the plant close-down. [Jack Kilby, who recently passed away after many many honors] Integrated circuits are now a mainstay in all electronics (which includes "radio"). [I am looking at a virtual 17-inch integrated circuit called an "TFT flat panel display" with at least one transistor junction per pixel as I write this] Solid state devices work well.

5. It is impossible to send data through a 3 KHz bandwidth at faster than 300 bits per second (300 Baud) said the literalist lookers-at-only-conventional-modulation-simplistic-explanations. Impossible! they kept saying at each stage of rate increases to 1200, then 2400, then 9600, and finally to 56,000 bits per second. Those all work fine. [56K modems are near bumping the upper limit of Shannon's Law]

6. Olde-tyme experts involved with analog image transmission insisted one needs much bandwidth to transmit video, at least 4.5 MHz for NTSC, 5.0 MHz for PAL. IT MUST BE THAT WIDE! they shouted. MPEG (Motion Picture Experts Group) said not quite and proved it. The "Grand Alliance" (industry-broadcaster association) evolved HDTV which carries 20 MHz analog bandwidth video, quadraphonic sound, closed-captioning text with alternate languages, and an optional isolated sound channel all in digital WITHIN a 6 MHz bandwidth...the video having nearly double the pixel resolution of old NTSC analog video. It works. Not only that, it works with perfect clarity down to the minimum RF signal level.

7. AT&T brought out "PicturePhone" in the 1960s. Rather wide bandwidth but with some compression by slowing frame rate, it evolved to work over standard telco lines (and limited bandwidth). It failed, not from anything technical, just from customers turning the picture OFF for privacy. It was withdrawn for reasons of not producing a profit. After divestiture a number of entrepreneurs tried various schemes of their own, but with marginal acceptance in the market. One-way broadcast-like "webcams" are the only result...but do allow streaming video over dial-up, limited bandwidth telco lines connecting to the Internet. "Slow-scan" works well technically, just ins't accepted.

8. Good old reliable manual telegraphy was 56 years old in 1900, mature industry that had spread worldwide. Average throughput was perhaps 20 words per minute. Then teleprinters got developed and standardization had begun. Teleprinting TOOK OVER the wired manual morse code telegraph business and "telegrams" began being sent by teleprinter. Morsemen were being "downsized" (out of work, replaced by 60 word per minute machinery operable by non-

specialists). Radio saved them from finding new work. Electro-mechanical teleprinters eventually evolved to 100 words per minute in commerce, industry, and government. Then the electro-mechanical teleprinters were themselves "downsized" by electronic data transmission means, much faster, and with on-line encryption for security.

9. You can't possibly put a two-way radio in a telephone handset (along with image and data transmission) that works at microwave frequencies cried the olde-tyme telephone experts...they will all interfere with one another they echoed. The U.S. Census Bureau said that two years ago the number of cellular telephone in the USA had reached 100 MILLION subscribers. Cell phones are now a part of our lives. They fit easily into a shirt pocket or purse. They work well in a cell area.

10. You can't possible send thousands of digitized voices over a single optical fiber cried the communications experts decades ago. It isn't as good or practical as copper wire lines they sang in chorus. Fiber-optic carrier systems now operate at 4 GHz bits per second and are self-repeating (amplification) by means of a second optical "pump" wavelength. The longest carrier line in the world goes from the UK through the Med through the Indian Ocean, around southeast Asia and on up to Japan. It works.

11. You can't possibly put a mainframe computer in every home said the experts of 1960. One expert even said that no more than a dozen mainframes would do the entire job of computing for the USA then. Today's personal computers in laptop size have 100 times the clock rate, 1000 times (or more) mass memory storage than the largest mainframe computers of 1960...and cost less than $2000 each (for laptops, half that for desktops). Those work very well...except for some operators of same.

12. You can't possibly put an entire 3-hour motion picture on a single CD said the movie experts of 1970, citing the equal impossibility of putting 6 hours worth of music on the same size disk! The MPEG showed them how. Today DVDs are fast replacing the older bulkier VHS tape cartridges and music CDs have taken over from vinyl disc "LPs." All the major auto makers make options for having DVD players for back-seat passengers; my wife and I declined that option on buying a new Malibu MAXX two weeks ago...the standard MAXX rear sound console with wireless headsets (stereo) was good enough for us. The DVD works very well.

13. Todays ready-built amateur transceivers are more digital than analog, "bells and whistles" are an easy task to add with a good programmer and interface designer...can include memories, a separate "split" VFO, digital signal processing, even a spectral display to see signals on either side of what you are tuned to...all for less than $4K (list) or slightly more if the entire "radio" is to be controlled entirely by a personal computer. Imagine what the size

of those would be if done entirely in analog circuitry...couldn't possibly fit on a desktop. Want squeaky-narrow bandwidths for that 109 year old style radiotelegraph signal? Easy, just use DSP, all digital using a microprocessor operating at high clock rates.

All of the above happened within my lifetime. I watched some of it happen even before being IN the engineering profession. My father and father-in-law were both born in the year 1900...a year before Marconi got his S across the Atlantic, three years before the Wrights finally succeeded in sustained HEAVIER-THAN-AIR flight at Kitty Hawk. They both watched the first humans walking on the moon over live television in their lifetimes.

"Breakthroughs" are always happening. If you really pay attention to the engineering profession you are "in," you would see that. Those happen because a few humans have the curiosity, the willingness
to TRY to make something new work. They are seldom disauded by the self-propelled "experts" who say "it can't possibly work!"

Or, you can sit back in the recreation of yesteryear, championing a 161-year-old primitive manual communication mode, getting all kinds of nice certificates (suitable for framing) for becoming expert at carrier-banging and pronounce judgements upon the "improper" attitudes of others...in a recreational radio HOBBY.

"CW gets through when anything else will" - B. Burke

Coslonaut, this newsgroup is NOT an educational institution.
Binary files containing schematics, pictures, other diagrams
are not allowed here...along with PPT files and other slide
stuff necessary to TEACH the iggorants.

>> Outside my area of competence, but I'll watch the
>> dialog with interest.
>
> Hey, Hans, ignorance is not a crime!

The Coslonaut has intimated so, demanding an Instant Education
into Information Theory in as few words as possible.

> Note that Jim brought up an
>*actual* method of trying to do a lot of BW using 256 or more phase
>angles that are decoded by the receiving station.

Tsk, he should write a Paper on that and submit it somewhere.

[harf!]

>That is not likely to
>work at HF, but a simplified version of this is used for some satellite
>comms.

So, what do you "think" makes a 56,000 bit per second modem
work over 3 KHz bandwidth telephone lines?

"Some satellite comms?" Which "some?" Be specific. The
geosynchronous orbit positions for communications satellites
have all been filled three years ago.

> they (see my link in my post to Jim) note that QPSK is more
>reliable - or at least suffers less from link degradation - same thing,
>than 8PSK. But there is some theory there that can be discussed.

There are hundreds and hundreds of other sources for THEORY
available for free over the Internet, ranging from simple
to math-heavy complex. You choose as you wish for YOUR
personal education.

> And as for "bemoaning", I have been asking for something based in
>solid theory since early in this thread. Most of what I have gotten in
>return is that I am an olde tyme ham (untrue) stuck on CW with my Bug
>(paraphrased, but laughably untrue), and topic shifted to DRM voice
>(technically working, but beside the point). That ain't substance.

Do you think every single posting in here is a "judgement on
your technical competence?!? How long have you had this
paranoic compulsion? Seek help.

DRM voice AND music is NOT "beside the point." It works.
On HF. Can be on LF through VHF. It has been working for
five years, successfully. Its future will be determined by
the shortwave broadcasting market (not a lucratie one since
the beginning of radio) listeners.

DRM uses both information compression and digital signal
processing to shape its spectral content into a 12 KHz
maximum bandwidth. The same principles can squeeze voice
only into a 3 KHz bandwidth.

The information compression and digital signal processing
is NOT an easy-to-digest subject. It requires many hours of
study to begin to get started knowing what it is about. You
want simplistic solutions in single messages, then become
emotionally upset when you don't get them. Tsk.

What you have for viability, for proof, is that there are
MANY different methods to send good communications through
limited bandwidths. Those have been named. The next step is
up to you, whether you are sincere in a desire to learn or
not. Nobody is going to waste their personal time and energy
giving you a FREE education. You have NOT earned that yet.

The Coslonaut bragged over reaching "the threshold of space" last year. It is now nearly mid-summer and there are no signs of his amazing feat (for which he wanted much praise) announced last year and going where other hams have gone before.

Now the CEO-effective of Coslonautics wants a FREE education of live, streaming, theater-quality moom pitchas over HF...when he can't seem to grasp the fundamentals of how 56K modems work.

Weird science in here. Tsk.

Coslonaut, suck up a flaggon of Fed Std ALE before you get lost in your own snarly rhetoric. You need some downers of some kind.

Tsk. Coslonautics, ink, is still challenged to reach the "threshold of space" as announced last year...going where other ham radio balloons have gone before. It is now nearly mid-summer and no flight, no tests, no words.

"Up up and awaaayyyyy....!"

We are all awaiting your famous flight to advance ham radio, science and mankind in general.

Yawn....

N2EY:

First, you can run duplex, simply use two modems and a separate transmitter and receiver. The second modem can be a USR internal if you don't have two serial ports for externals.

To run duplex with one modem, there is some kind of patch device they used to keep the receiver output from getting on the mic input of the transmitter (but the modem had simultaneous access to both)--and for the life of me, I can't remember what it was called, first time I had ever seen one. When I get a chance, I will ask about it. You might know what it is/was?

Second, it works, build one--or--draw it on paper and decide it does not work.

I am on to other things, I got tired of webcams years ago. Don't even video chat on irc, MSN Messenger, ICQ messenger or yahoo messenger much anymore. And that is much easier than "Mac Amateur IM."

I can tell, this argument will shortly switch to rules and regulations, it always does, and I have no interest in having such recited to me. Expect only my bad nature in return.

I didn't do the hardware or even know the "true nature" of the signal which comes out of that modem and hits the phone line or a mike in. I just toyed with the software and watched it work--it "lived" in my garage for a year or so.

I am into my "universal translator" these days and trying to set up to chat fluently with the russians...

I think the russian girls are kind of cute... <grin>

I could give a rats ass less if you, or anyone else likes my sentence structure. I have found that when one criticizes structure and spelling, they have run out of arguments.

As for you being a sham.....you just answered that. You come on here trying to act like you know something about a particular subject in Amateur Radio, and you make a complete fool of yourself. Then when someone tries to explain it to you, you proceed to make fun of that. Or ignore him/her totally.

And no I don't have "examples" handy. And won't waste my time looking for any. You know that is how you are.

And no Kim , I don't think my judgment of you is all that far off. And the majority of that is because of your choice of vanity callsigns. It brings shame on you and the Amateur Service.

That is my opinion and if you don't like it. Tuff.

Dan/W4NTI

No, John has NOT "been challenged." Real-time video that fits into
the bandwidth of a SSB voice signal is available from Internet over
3 KHz bandwidth telco lines today, last year, the year before that,
by the thousands. It is HERE. You or anyone can go down to the
computer store in your town and buy the components, put them
together yourself. [a few computers have had them built-in] Those
work in a 3 KHz bandwidth.

Hmmm...on "challenges." The Coslonaut said he would reach "the
threshold of space" last year. He was going where ham radio
had already gone before. So far he hasn't gone.

Remember, when you gotta go, you GOTTA go.

As to your "challenges," I invoke the Byte Brothers: FYDITM!

bit bit

Kim:

bow down and worship these men, they are giants in their own minds

they are heroes of radio

the are the knights of rf

they are shit

dan has treated others badly and he has a whole group like him here,
they are a hideously uncouth bunch

get a tough skin quick or be washed away like the other light-weights

sit back and watch them beat up on others for a bit, that will give
you the ability to realize you are nothing special, they do it to
anyone not in their little 'homies group'

just do not join up with them, there are too many here already

They only are anonymous to the average John Doe.

Believe me, you say the wrong thing and attract the wrong attention, you'll be anonymous for only about an hour at best.

After which, you may well be thrown into prison and held without charges for years.

Is this a great country or what?

Get over it, anonymity has been gone for over a decade.

I am hardly a "toady". You may not be aware, but I served in the U.S. Navy during the Vietnam war. There had been a typhoon on Saipan that wiped out the Coast Guard tower there.

Hans was sent to try and re-establish communications with Guam.

I was the individual on Guam who made the initial contact and the amateurs relayed traffic for a number of days between Saipan and ComNavMar. Hans was on the Saipan end, where most everything had been leveled.

I respect Hans simply because he has *earned* it.

Is that such a difficult concept?

Hans did more for his country in a week than most do in a lifetime. Frankly, I couldn't care less about the folks that want to dismiss Hans; as I stated, he served, served well, and served proudly. I have no problem with that.

I suspect you'll be one of the folks in the years to come that will condemn the guys and gals serving in Iraq and Afghanistan today. You'll be another one voting to cut VA services. Thank you so much.

Where did you serve? Or did you serve like our current Commandant-In-Chief?

With all due regards from Rochester, NY
Jim AA2QA

Agreed!

He could also avoid the hazard, and point it out to others so
they do not trod in it.

> >So you're saying that the posts of Len and some others here

So you agree! Excellent!

Now let us consider.....

If your description of Len's posts (the product) is accurate, what does
that make the producer of said product?

That pretty much sums it up, I think.

There's a frequency, I think 5.170 off the top of my head, that all
amateurs in Alaska are allowed to use for emergencies. Includes
Technicians. Oooops. Violates the defunct treaty.

> > > FYI...Since you've been in a time warp (and obviously enjoy making

Techs can use Morse Code on VHF and above. I knew one who did
Quitefine at it.

you should be looking Heterosexuals or men that can't deal with being
bi or or gay, not those who are comfortable with theier sexuality

Meaning in term of statitstics you are more like guilty of those
molestations than I

Yeah, I realized immediately after I posted that I'd missed that "litle
detail" myself. Nutz, I leaped too fast again. But then again maybe his
RX has a built-in sprinkler system . . ? We dunno . .

> Poor soul prolly doesn't know what "QSK" means, either.

Why would he? Ya don't find a a helluva lot of QSK ops on 11M.

Glad you asked! "Things" are moving along well enough, much of the equipment has been chosen, yet needs to be integrated. Flight 1 will be tethered to shake down the payload, flight two will be a short, relatively low altitude flight. At flight 3, the payload form factor will be changed. Beyond that, the flights will build on the success or problems encountered during previous flights.

That's all the words you get.

There will be web pages devoted to the project. At that time you can read and ridicule, but you'll have to go to the website to get yer material.

OH I see now. You are not only a K0HB sycophant, but
you also repeat the often debunked and infamous
"Hans Radio Hero" story. OK, you can go back to hitting
the shot 'n beers down at the Legion Hall.

There's a sequel coming out soon. They are filming it down at
the Legion Hall. The title of the remake movie is going to be:

"Hans And His Sycophants Tell Radio Hero 2"

The new story line will involve how Hans personally changed
the course of a Typhoon, so that radio traffic could get
through to the fleet.

Give me a break. I remember the guys that were there. John L. Smith III (who I located, courtesy of QRZ.com), and Dean Seaver (not sure of the spelling; I couldn't locate him either on QRZ.com nor the Social Security Death Index, so I'm not sure). There were other folks, some of whom received commendations from the commanding officer, Captain Delaney. The next thing you will be telling me is that pi is equal to 3. It is *not*.

The fact is that I *was* there as was Hans. I honestly do *not* care what you believe as that will not change facts.

Which begs the question, what did you do for your country (other than whine and complain)?

With all due regards from Rochester, NY

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I'm not to sure about the first test being 5 words per minute. Someone more savvy than I will have to let us know what the real scoop was.

I believe that 13 was the minimum until the novice came into being in the 50s.

The commercial licenses were a bit tougher. The standard circuits (commercial mariners) operated around 25 to 30 words per minute in the mid 60s. I know as I was with some folks that inspected a commercial vessel on Guam in the mid 60s and I chatted with the radio officer.

The 5 words per minute test was to allow entry level folks a chance to get their feet wet. It had nothing to do with being able to chase someone off a frequency.

What no one appreciates is that way back when, in almost any endeavor, there were no licenses. Who would Wilbur Wright apply to for an aircraft license? The first automobiles had no licensing restrictions. After a bit, they started posting speed limits as the "horseless carriages" startled horses! The same applied to radio. No licenses at first. Only when the airways started to get a bit crowded and folks started acting like they do in this newsgroup did laws come into being.

Eventually, folks needed laws. They needed to have a method of going down a street and knowing who had the right of way. Do you want someone parking in the middle of a street? Or going 60 or 80 miles per hour down a residential street?

Unfortunately, many do not understand that laws are to allow all of us to use limited resources in such a way that all can enjoy them.

As to Morse, I'm neither for nor against; I am however, somewhat aghast at the folks that do have a license and appear quite clueless as to any of the rules and regulations that are designed to protect all.

Bin Laden?

Now you know bin laden huh? Well buddy, just how do you know bin laden, are you related to him? Are you one of his buddies?

Maybe you should just come on in and have a chat with rummy and me and let us know what you are up to.

If you are hiding bin laden at your place it would be best to give him up now. We'll go easier on you if you do.

G.W.B.

Whellllllp...We already have your admission of blatant lying, Mark,
so we'll just chalk this one up to that too..

But we'll also add in a dose of foolishness and stupidity for
having thought that you could pass it by anyone so overtly.

> > > > You asked a specific question, he gave a specific and technically

> > even class of license required

Well, Mark, YOU asked about the 60 meter "band". Hans quite
appropriately corrected you taht there is no "band" allocated to
Amateur Radio, and he was right....Just five discreet channels.

And you did indeed ask about modes. And he precisely reported the
one and only mode authorized for U. S. Amateurs on those five channels.

> > > > > > You asked about HF regs when you inquired about the 60M band.

Mark, you are not one that ANYone has to worry about earning
respect from. You're an admitted liar and deceiver.

A creep.

> well anything you call foolish. Geewhy do I think of a quote of acting
> Pres Walken(west wing) anything that pisses off the arab s must be
> about right. Something you think is foolish must be about right

Mark, EVERYthing you do is foolish.

A rational mind wouldn't lie in a public forum in the presence of
people who know better and a sane mind wouldn't admit to the lying.

The point is you're a liar. Not as lowlife as a child molester or
a spouse abuser, but certainly in that bracket.

> You are also a liar, just not man enough to admit it (or is it not
> smart enough to know)

So far, you've made that claim several times, as has Brain Burke,
but neither of you has generated a single bit of posting to back it up.

> > And you've done it again right here.
>
> yes
>
> why do you insist on beating long dead equines?

Because you keep raising your head up, Mark.

Liars need to be kept in a corner with a big yellow "L" on their
foreheads.

I'm not close enough to actually paint one on you, so this will
have to do.

> > > > He gave you the specific frequencies allowed and the mode allowed

Yep.

And we will again chalk this up to your lair status.

> > Nothing more...nothing less...
>
> Nothing indeed

Nothing but the right information.

That you were too ignorant to understand.

> > To insist otherwise is to further prove yourself a liar, Mark.
>
> further prove is that even possible certinaly not in your eyes
>
> which means it is another lie on your part

Nope.

(1) You've admitted to being a chronic liar.

(2) The proof is here:

> some region of the band.

> Is my impression corect.

There is no 60M "band". US amateurs are allocated 5 discreet 2K8J3E
channels
centered on 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz and 5405 kHz.

73, de Hans, K0HB

I didn't admit anything.

I said I praised him.

> Is the pillow trick how your little girl died?

Nope. She fell asleep peacefully.

You should be as lucky to go as peacefully as she did.

> > > and you can't spell "ahve" you have been blwoing that one all day

Your "problems" are complete and utter contempt for the people
reading your stuff, Mark. Most people do make OCCASSIONAL typos, and
we can all understand those.

Yours are in almost every sentence.

You also have extremely poor grammar and sentence construction.

It's got nothing to do with dyslexia. It's got everything to do
with WANTING to be "special".

Tom Cruise is dyslexic. He fixed his problem. You're just lazy
on several levels.

What? Huh?

> > You're slipping,
> > Markie.....waaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaay
> > down....
>
> But you will always be down there in case I fall

Just to point and laugh.

The slippery spot has been pointed out to you...But you keep
trying to walk through it. That deserves a good laugh when you fall.

And lately that's been just about every post you make.

> > I'd offer you a rope, but only with the caveat that you put it

Because it's the right thing to do...Like stopping little old
ladies from being mugged or reporting drunk drivers.

> and what of your oath to the constitution of the US , Marine. It binds
> YOU to rspect the rule of LAW,
> guess you don't qualify as "semper fi"

My Oath to the Constitution of the United States has nothing to do
with pointing a finger and calling a liar a liar, Mark.

And you are, by your own admssion, a liar.

You've even reproved it numerous times in the last 24 hours.

And you'll never know what "Semper Fi" stands for...Oh yes, I know
you can cite the translation, but you'll never know what it is to be
one of the Band of Brothers.

Never.

> > > > I could do exactly what HE does and extract single words from

> just what you want it to mean.

Never have done that, Markie!

YOU have...ie: "drafted".

You never did adequately explain your meaning of "drafted". I, of
course, gave you the true definition as it pertains to the Armed
Forces, whcih YOU were alleging membership in...

So let's hear it...

> > > > > But you cheat Steve of his due He is pure as the driven over snow deny

What I am trying to figure out is how you worked that in to the
conversation...I certainly didn't and neither did anyone else I see.

Of course you blame others for such introductions...Yet here you
are doing it yorself...

Again....

> > > > > > > Hence i take and have always taken precautions and thus Steve has never

Lies, lies, lies, Markie.

I have only one father. He's deceased. His Amateur call was
N8DOS and it's still on QRZ. I dare you to get his name and run it
through NCIC

> Roberson or robeson are coruptions of RobberSon look it up in the work
> of the Brothers Grim

The "Brothers Grim" wrote tales.

"Robeson" is not a corruption of "Robberson"

Perhaps you should be doing your research somewhere other than in
children's fairey tales...

> > If you want to see "garbage", re-read all of the posts under your
> > own hand...THERE'S garbage.
>
> nO don't want to see garbe which maybe I should stop reading your posts

There's more of that very same garbage, Mark.

Spellchecker.

Hooked On Phonics

Get them both...Use them.

Steve, K4YZ

Dee Flint wrote:

> Please show me and everyone else how we can run more than 300
> baud on HF
> without exceeding reasonable band widths. There are a whole
> lot of things,
> not just video, that would be nice to do.

The answer (in large part) is to use different modulation and encoding schemes. Such as QPSK instead of BFSK. Multiple carriers spaced just far enough apart to avoid interference. Simultaneous AM and PM.

Of course such modes may not have the HF performance we're used to from, say, PSK31 or SSB. You don't get something for nothing; Shannon's Theorem shows that the increased data rate in a given bandwidth comes at the price of needing more S/N to get acceptable results.

As K0HB points out, the 300 baud limit only applies in the CW/data subbands. If you can stuff "TV" into a reasonable bandwidth, it can be sent in the voice/image subbands.

As a simple example, imagine 25 PSK31 carriers spaced cheek-by-jowl in a typical SSB bandwidth, running QPSK. If one gets you 100 baud, 25 will get you 2500 baud. Go to 8PSK and you get 5000 baud. Then add compression on top of that...
>
> How can we do it? Bandwidth is directly related to baud rate.
>
Only if "all else is equal". The trick is to make the tradeoff somewhere else. The familiar "56K" modem trades off S/N rather than bandwidth.

It's not a complex subject at all.

You've probably heard the old engineering adage:

"You can have it fast, good or cheap. Choose any two"

All Shannon's Theorem does is equate fast to data rate, good to S/N, and cheap to bandwidth.

> > should have

Why?

The 5Mhz channels still fall below 30Mhz.

> There's a frequency, I think 5.170 off the top of my head, that all
> amateurs in Alaska are allowed to use for emergencies. Includes
> Technicians. Oooops. Violates the defunct treaty.

Several points:

(1) The exact frequency is 5167.5KHz...or 5.1675MHz if you
prefer) ...However it's restricted to stations (>>ALL<< FCC licensed
stations...) in or within 50 miles of the State of Alaska, and is
strictly for Emergency use only. One discreet channel. And it's not
an "Amateur" channel. Amateurs are allowed on this frequency as an
accomodation to safety. A real stretch to cite it as a "violation" of
any treaty.

(2) The treaty you refer to is NOT "defunct". It is still very
much in force. It HAS been ammended, however present United States
rules and regulations as they pertain to the treaty are in compliance
with said treaty.

Uh huh....Which are...?!?!

BELOW 30MHZ ! ! ! ! !

QUICK, MARKIE! REVIEW TIME!

What are the four exceptions that allow a "Technician" to act as
control operator of an Amateur Radio station below 30MHz...?!?!?

And WHAT common thread do each of those exceptions have in common
with the present Novice, General, Advanced and Extra class licensees?

> Techs can use Morse Code on VHF and above. I knew one who did
> Quitefine at it.

Techs can use Morse Code on HF, too. But hey, I thought YOU
insisted that SOMEone has chased all the Techs away...?!?!

Another QuiteWrongLie it seems.

Sheesh...All I needed to do to get promoted was to do my job as
directed.

We either did our jobs and got promoted, or we didn't.

No "benefactor" needed.

See "The Art and Skill of Radiotelegraphy" available as a free download.
It documents the history of testing for amateur radio. It was 5 wpm at the
beginning of testing. The multilevel code tests came in later.

Jim Hampton wrote:
> I'm not to sure about the first test being 5 words per minute. > Someone more
> savvy than I will have to let us know what the real scoop was.

Quick history of code tests for USA ham licenses:

The 1912 rules that moved amateurs to "200 meters and down" required a code test of 5 wpm for a standard amateur license. That state of affairs existed until the WW1 shut down in May, 1917.

It should be noted that during the WW1 shutdown, receiving as well as transmitting was forbidden.

When amateurs were allowed back on the air after WW1 (thanks to the work of Maxim, Stewart, and a few others, mostly prewar ARRL directors), the new licenses required a 10 wpm code test.

>From 1919 until 1936, the code test speed was 10 wpm. There was also an "Amateur Extra First Grade" license that required 20 wpm. It was short-lived in the early 1920s.

In 1936, the code test speed was raised to 13 wpm. The written exams were improved at the same time.

In 1951, the Novice and Technician licenses were created, and required 5 wpm. The Extra (as we know it) was also created then and required 20 wpm.

That state of affairs existed until 1990, when the code test waivers were introduced, and then 2000, when all code testing was eliminated except 5 wpm.

> I believe that 13 was the minimum until the novice came into
> being in the 50s.

>From 1936 to 1951, the *only* code test for US hams was 13 wpm.

> chance to get

> their feet wet. It had nothing to do with being able to chase > someone off a frequency.

Exactly. The idea was that it would be easier and faster to learn by doing.

However, one of the reasons for code testing back in 1912 was to avoid interference. This was really a way of insuring that all radio stations knew and used the *same* code, because before 1912 there was more than one code in use on the air!

But interference mitigation was not the only reason for code testing. There are still good reasons for code testing today, such as its widespread use by amateurs.

Fun fact: Until 1927, Amateur Radio was not a separate service that was recognized by international treaty. Instead, it existed solely at the pleasure of each country, and the privileges varied all over the place.

All that changed in 1927, when a new treaty set up worldwide bands for hams, basic rules and procedures, etc.

One of the new 1927 requirements was that all amateurs pass a code test. Prior to that, code testing for hams existed only because individual countries required it.

> started to get a bit crowded and folks started acting like they > do in this newsgroup did laws come into being.

Yep. "Wireless" was around for more than a decade before 1912. There were a few treaties and some regulations but they didn't do much, compared to what came after.

It should be remembered that many concepts we see clearly today were not even imagined in the early days. For example, broadcasting was not considered in the 1912 rules - nobody really thought that millions of people would own radio receivers to listen to stations that did nothing but transmit.

There were many bills written and proposed to regulate wireless before 1912, some of them very draconian. One concept that was fortunately defeated was the idea of licensing *receiving* stations...

> street and knowing who had the right of way. Do you want

> someone parking in
> the middle of a street? Or going 60 or 80 miles per hour down > a residential street?

Yup. Of course if there's only a few cars on the road and they go 10
mph top speed, you don't need many rules.

Didja know that it was Hiram Percy Maxim hisself who convinced the
fledgling US auto industry that traffic should keep to the right and
the driver sit on the left? HPM was into a lot more things than radio.
>
> Unfortunately, many do not understand that laws are to allow

Nope.

Being able to assess the basic level of social development and competency with "ADL'S", or "Activites of Daily Living", is a number-one criterion for a good ER Nurse.

Now...Would YOU please show me where YOU have any credentials in determining what is and is not within the scope of practice for a Nurse at ANY level of licensure...?!?!

> > You have a problem with English. You're not very proficient at

You can be expected to at least know where to find the information
since you ARE responsible for it as a Commisssion licensee of an
Amateur Radio station.

I don't know them all either, but I know where to find out.

> > We often refer to single sideband, fm, cw, or whatever. The nomenclature

> useless to me

It was only useless to you since you refused to follow-up on it
from there.

You wanted spoon-fed, written in crayon answers.

Hans' only mistake was assuming that you might be albe to
understand the answer.

> > Not slamming you, but Steve was not entirely remiss in his post.
>
> I accept thatyou intend no slam but I miss you have missed Stevies
> intent

There's no "intent" on my part, Mark.

You asked a question. You got the answer. You then insulted the
respondant and called him a liar.

You were wrong on several levels.

You owe Hans Brakob an apology.

you should not, but given your control freak mentality you may well
have done so already,

OTOH it is what I said. what I said is that if you think knowing such
codes is so important you address your concenr to NVEC

There is no requirement that I know any rule or regulation Stevie,
merely that I obey them.

I freely admit I don't or care about the meaning of j87fh76k or the
differences between it and j6gd748jd

> up to the light of day.

you are just the one inistsing that irelavant info must be repated over
and over again

Dirty laundry, bullshit

I am admit to being Bisexual I admit to being Pagan. I admit to
spelling poorly

Now what that has to do with Ham radio or policy therin I don't know

Stop beating the poor dead equine, please

your judgement of "failed character" only by perhaps by YOUR standards
fine so my Stevies standard my character is poor

Grow up and move on

Stop beating the poor dead equine, please

>

>
> What are the four exceptions that allow a "Technician" to act as
> control operator of an Amateur Radio station below 30MHz...?!?!?

none that apply to me

and what I think you are referring isbad decision of the FCCto end
thech vs thech plus license

hopefully that mistake will be fixed

>
> And WHAT common thread do each of those exceptions have in common
> with the present Novice, General, Advanced and Extra class licensees?

so?

Now on to turth

Nothing prevents the FCC from allowing hambands anywhere in the
spectrum and assigning them to Tech class, and allowing techs without
code tests to use them

NOTHING but tradition perhaps

>
> > Techs can use Morse Code on VHF and above. I knew one who did

bullshit
>
.
> > >
> > > You've said so yourself this very day.
> >
> > yes your point.
>
> The point is you're a liar. Not as lowlife as a child molester or
> a spouse abuser, but certainly in that bracket.

fine when you going to admit to your lies

well then I am in Decent Company In cluding amoug other FDR, Truman,
thousands of congressmen and senators, alomst everyone who ever served
in the CIA (or MI6) every cop in the nation, almsot all of whom have
lied fromtime to time

Stevie you and I simply don't agree on a basic premise, you think it is
imoral a sin even to lie.

therefore you attach some moral tone to proving the lies of others

I OTOH see it as some a good thing to do

I salute FDR's lies that got the USA ready for WW2

perhaps my biggest mistake in ham radio was from being honest in my
youth, after my history with Morse code test failures some folks
offered to "fake it" for me. I was honest enough to not to let them.

>
> > You are also a liar, just not man enough to admit it (or is it not

nothing about ferqecies in the question

and the rest is gibberish that

no answer to the question of wether CW is allowed

Indeed to expound on that

Why isn't it allowed in mode 2K8J3E to send MCW over than Air?
>

655. HP Tech Support now gone overseas (ot)

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-06 14:07:45 UTC
From: Bonobo Roger <hpsucks@hpsucks.com>
Message-ID: <d177c$42cbe5bc$d1cc5062$25442@snip.allthenewsgroups.com>
Source record: 112014
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

If your thinking of buying an HP computer product....DON'T !

HP has gone to India for all it's telephone Customer
Support and they all speak bad English and you can't
understand a word they are saying.

Buy an HP....
Have a problem...
Call up their Tech Support hotline....
You'll get "Pasheesh-from-Punjab" who talks like
he's got a mouthfull of marbles and can't understand
a word your saying because he'e been trained to
read from a script like a trained spider monkey....

(HINT: You'd be better off calling Habib at the local Dunkin-Dounutz for
tech support..)

---> F*CK Hewlett-Packard!! (another formerly great USA company that's
now frigged it's historic reputation for great customer service by
going to half-ass
overseas tech support in)

Buy someone else's product instead and tell HP (..and Aglient Technologies
too!)
to go do somehing with themselves and their crap products and support.

Signed: a former HP Business/Commercial customer.

> from, say, PSK31 or SSB. You don't get something for nothing; Shannon's
> Theorem shows that the increased data rate in a given bandwidth comes
> at the price of needing more S/N to get acceptable results.

That old s/n bugaboo. PSK31 does very well at low power levels in great part because the PA of present day transmitters work well at lower power levels. Crank 'em up to full power, and things aren't always so pretty. You can visually see the results on the waterfall, just as you can see when the drive level is too high.

Now is that an insurmountable problem? No. But it means that we would probably have to design new transmitters that can put out a PSK-friendly output at high power levels.

Another method is of course to increase the ERP. So we can put up a directional antenna.

But now we're certainly a long way from simple, and many present day rigs and users wouldn't be able to participate in the fun.

I wonder if any experiments have been performed by Amateurs along these lines to find a practical limit to how many different phase angles can be accommodated. Sounds like fun.

> As K0HB points out, the 300 baud limit only applies in the CW/data

> As a simple example, imagine 25 PSK31 carriers spaced cheek-by-jowl in
> a typical SSB bandwidth, running QPSK. If one gets you 100 baud, 25

> will get you 2500 baud. Go to 8PSK and you get 5000 baud. Then add
> compression on top of that...

PSK31 is 31 baud, so the numbers have to be shifted a bit. The baud rate was chosen because it is around the level that a good typist can type at. But it can be changed PSK100 baud easily, just sacrifice a bit of bandwidth.

>>How can we do it? Bandwidth is directly related to baud rate.
>>
>

Same with light bulbs:

Bright, long lasting, or cheap.

> All Shannon's Theorem does is equate fast to data rate, good to S/N,
> and cheap to bandwidth.

still a hypoctrite

you don't even check your admission for of typos for typos

OTOH you do have point I have a complete and utter contempt for those
people reading my stuff most closely. First on the that list is your

Name these days.

Anything you want is more likely to get the opposite than your desired
result, and I certainly am not spending an effort on plesing you

Grow up, get over it, move on

and please stop beating the dead equine

>
> Yours are in almost every sentence.

I deny almost ervy sentence but tha is a quibble

I don't deny making typos

I don't deny making LOTS of typos

Grow up, get over it, move on

and please stop beating the dead equine
>
> You also have extremely poor grammar and sentence construction.

not realy stevie, it is as other have agreed that I treat this medium
DIFFERENTLY than you.

I don't see the Usenet as truely a written form sinc it is not
inteneded for any formal purpose.

I see it as more akin to spoken engligh

Indeed I seem to recall other agreeing that reading my aloud and
lsitening to it often clears things up

You can choose to do this or not

but you lack the right to dictate what I must do

>
> It's got nothing to do with dyslexia. It's got everything to do
> with WANTING to be "special".

Nope

Defferent perhaps. indeed if you are Normal Stevie I don't want it,
would turn it down if offered,

Your concerns as near as I can see them disgust me.

>
> Tom Cruise is dyslexic. He fixed his problem. You're just lazy
> on several levels.

he says he has

Ok I am lazy on several levels

Lazy is not a crime

If you feel it is chacter flaw the to you it is
Grow up, get over it, move on

and please stop beating the dead equine

That's transmitter IMD - just one part of the problem.
>

Which can be done and is being done.

> directional antenna.

And an amplifier.
>
> But now we're certainly a long way from simple, and many present day
> rigs and users wouldn't be able to participate in the fun.

But all that is doable. After all, Morse Code has a big S/N advantage
over even SSB voice, yet hams manage to make SSB contacts on HF. Morse
Code simply does better under marginal conditions. Or perhaps we should
say that its margins are lower.

> I wonder if any experiments have been performed by Amateurs along these
> lines to find a practical limit to how many different phase angles can
> be accommodated. Sounds like fun.

The problem is in two parts: First there's the accuracy of the
hardware, which is probably pretty good using modern parts and methods.

But second is the distortion of the RF path, which is not under our
control. If, say, the ionosphere causes the phase to wander a couple of
degrees each way, modes like BPSK and QPSK may still work, but "256PSK"
will be full of errors.

Note how there are times when PSK31, even if the signals are loud,
won't work in QPSK mode but will work in BPSK mode. That's not because
of narrower bandwidth or some hardware or software change. It's because
the path is introducing so much phase distortion (a form of noise) that
the distortion exceeds the QPSK demodulation criteria.

W0EX observed path-induced phase distortion that was so high that PSK31
wouldn't work even in BPSK mode, yet the PSK31 carrier could be heard
clearly and seen easily on the waterfall.

Yes - I should have written "PSK31-like"

> The baud
> rate was chosen because it is around the level that a good typist can
> type at. But it can be changed PSK100 baud easily, just sacrifice a bit
> of bandwidth.

Exactly. The principle is what matters. The problem is that the
transmitter and receiver must be very linear to avoid IMD products
causing trouble.

> >>How can we do it? Bandwidth is directly related to baud rate.

> Bright, long lasting, or cheap.

I'd say "bright, long lasting, or efficient".

> > All Shannon's Theorem does is equate fast to data rate, good to S/N,
> > and cheap to bandwidth.

There's also the factor of error rate. In the above simplified discussion I assumed the same error rate for all cases. Obviously there are some situations where a higher error rate is tolerable. Error-correction can help, but error correction carries its own overhead, slowing down data rate.

A dramatic example of the effect of errors can be seen on TV. Conventional analog NTSC-type TV shows "errors" as "snow" and sometimes even loss of sync. But you can still watch a "snowy" picture. Digital TV methods often show errors as pixelation or complete loss - you see *nothing*.

---

btw, the US military is investigating the use of near-space balloons for communications and intelligence-gathering applications.....

Stevbie, I think K1MAN arguement is that his side of the story isn't
getting out, because most of those groups he mention either banned him
or don't want to here his side of the story. Secondly, this is a FREE
country and I know a Nazi, sadist hateful person like youself don't
believe in allowing people telling there side of the story,

OH, your high and mighty ARRL hasn't screwed amateur radio
over...right, and your a basard and a sadist for calling me a
hate-monger, as for selfish, yeah I am, I didn't get in this hobby for
you or your asshole buddies at the ARRL, I got into for myself, I'm not

a fucking communist you believe this hobby is a "collective" like you
are.
> I love both America and Amateur Radio, however.
>
> No you don't.

And you do stevbie?? you and your little commie buddies on here
suppress people right to free speech, or you bad mouth them and then
turn around and try to justify yourself as if it's your moral duty
because you can face a debate head on,

Well Crybaby Steve, Unlike K1MAN, I USE an UnUSED frequency, and I
check to see if the frequency is not in uses, Secondly, all my programs
deal directly with amateur radio, no off the topic subject matterand no
pencuniary interest, but hey a asshole like you hasn't heard my
transmission, so you wouldn't know.

well see stevbie, I hope K1MAN brings up section 326 of the
Communication Act of 1934..

TITLE 47 > CHAPTER 5 > SUBCHAPTER III > Part I > § 326

§ 326. Censorship

Nothing in this chapter shall be understood or construed to give the
Commission the power of censorship over the radio communications or

signals transmitted by any radio station, and no regulation or
condition shall be promulgated or fixed by the Commission which shall
interfere with the right of free speech by means of radio
communication.

Good luck! HP bought Compaq, so same applies. Last I heard, Dell was also
outsourcing to India for support. IBM sold out to China!

> overhead, slowing down data rate.

That it will. PSK *is* a delicate mode, and gets more delicate the more phase shifts in use. Interestingly enough, it works pretty well at frequencies where there is more bandwidth available

> A dramatic example of the effect of errors can be seen on TV.
> Conventional analog NTSC-type TV shows "errors" as "snow" and sometimes
> even loss of sync. But you can still watch a "snowy" picture. Digital
> TV methods often show errors as pixelation or complete loss - you see
> *nothing*.

That brings up a useful analogy. When I got started in video, the portable work was being done with the old 3/4 inch U-Matic tapes. As time progressed, we shifted to formats like Betacam, S-VHS and the like. Eventually some interesting formats such as Hi-8 came out. The Hi-8 had a pretty decent video quality to it, and looked like it was going to revolutionize things.

But there was a problem. I'm sure you are familiar with the way that modern video lays the tracks down on the tape - the record heads are at an angle, and there are at least two of them. This way the tape is "striped", with the video laid on at an angle to provide more linear space with which to write the image.

This was videotaping's bandwidth "cheat". And it works fairly well.

But the needed bandwidth didn't go away, and there was tremendous demand to make the tape smaller and more slender.

So the fix was to lay the heads at an even greater angle, so as to compensate for the smaller tape. What may have been a 70 degree angle for the 3/4 inch tape might be 45 degrees for 1/2 inch tapes, and perhaps 22 degrees for the 8mm tapes. (note: approximate angles)

A dropout - a fairly common thing - on U-Matic would just make a little white dot on the screen. On the 1/2 inch tapes, an entire line might be lost. On th 8mm tapes the entire signal might go away for a little bit.

This is because that missing oxide will be cutting across a lot more of those stripes on the tape as it got smaller.

So, "flight 1" hasn't gotten off the ground yet...

Been almost a year since you started cheering for yourself
in this newsgroup.

> There will be web pages devoted to the project. At that time you can
>read and ridicule, but you'll have to go to the website to get yer material.

Nothing's happening yet, is it? Everything on the ground.

Think of it this way: "Outer space" is only an hour's drive
away...if your car can drive straight up, that is...

Be sure and notify the NY Times, Wall Street Journal, National
Geographic to be on the alert for the Latest News from Launch
Control. Once you are out to launch, you might be out to lunch.

Bone apetite.

BTW, will you have "live streaming video" from das balloon?

Keep the bandwidth down, senior, you can't interfere with
others' communications, despite the glory and grandeur of this
(not yet) accomplishment.

"Up, up, and awwaaaayyyyyy!" Yawn.

bit bit

Did John say "on the same frequency?" I don't think so.

FULL duplex IS possible using SEPARATE frequencies for
transmit and receive. [note spelling of "receive"]

Did that over 50 years ago on 9 terminals at 1.8 GHz.
Full duplex. Twenty-four voice channels each terminal.
No problem.

It is going to be tough boys, you are going to have to tighten your belts for your country, we have to provide excessive profits for out buddies in the large corporations and the friends of our noble families who need a standard of living approaching that of royalty (did you ever notice my dad was president too, we are the beginning of a blue-blood line of royalty, respect that.)

We just have to outsource these jobs to the people of the world who are left to take advantage of, your fellow americans have become too educated to work as slaves and live in poverty.

If things really get tough for you here, catch a boat to india or china, we will have a job for you there, just tell them george sent you.

Have you ever been to mexico, you might want to try there, it is closer and they have great tacos there for lunch... although smuggling drugs across the border is highly dangerous, it does provide big lucrative returns if you do not get caught.

Don't be afraid to try something new...

K1MAN will win his case, because the FCC and ARRL have been
involved in illegal and unethical collusion for decades.

You can still get hired by the FCC, if you are a
black female drug addict.

Larry;

You are right, in Texas we call them boys whimps. My buddy arnie in california calls them girly-men.

You ever seen a president cry? When those whimps/girly-men all start up their whining battle cry, it is enough to bring a president to his knees and tears to his eyes. Not a pleasant sight, I can assure you. So, try to keep those boys out there quite if you can, we are trying to get some sleep here.

We are all worn out from cleaning up the whitehouse after clinton and his bunch left, the ones which did not die mysteriously that is. It was a mess, ewwwwwieee! You know that stain on monica's dress. Well that was not the only stain that dirty bugger and his lot left around here. Darn near wore my wife and I out scrubbing those stains off the walls, carpet, drapes, toilet seats, etc.

Ya'all take care, ya hear?

he,he,heeeeeee!

Hell, tech support was pretty much worthless even
before. Had a problem with an HP PC I bought in 1998,
they didn't have a clue. Seems a video driver bug would
make the machine turn itself off at random times every
few days... Found an answer in some forum, even after
updating the video drivers it would occasionally shut down
but only every few months.

Since upgraded the OS to Win 2000 Pro, last fall, haven't had this
problem yet... Knock on wood grained Formica....

I've had good experiences lately with a HP PC problem and a HP printer
problem using the on-line chat option. Both problems were taken care of,
and quickly.

It's only delicate to certain kinds of disturbance. PSK has been the
mode of choice for deep space communications for over 40 years because
of its performance in a Gausssian-noise environment.

> Interestingly enough, it works pretty well at
> frequencies where there is more bandwidth available

Don't forget that filters can cause phase distortion!

At the same time, the tape media has improved, as have the heads and
transports.

But HF is still HF.

No kidding Sweetums I've done it several times myself. With my own
equipment operated under my own operators and station license.

But in your case of course . . <sigh>

Dee, don't you sweat over the code either.

Yep! There are plenty of Code Tape Extras out there who've never sent
a single dit in their lives.

I'm not so sure. Riley said that not following band plans was poor
amateur practice. Riley also said that poor amateur practice was
enforceable.

It's interesting that we has a post from Jim (I think) where every word in a paragraph was misspelled, but was easily readable. But Steve constantly has issues with everyone's misspellings, except his own.

Now we've got the W.V. banjo picker trying to make an important point.

What a bunch of misfits.

Heck, that was the *short* version!
>
> Either you're an Einstein, or a good Google user ;)

I'm neither - all that came from other sources. Writing that piece
about the past 50 years of US amateur radio licensing about 5 years ago

helped a lot. (you did see that piece?)

Didja know that in 1964-65 when the "incentive licensing" idea was being developed, FCC proposed a *fourth* code test speed of 16 wpm? Existing Advanceds would have been demoted to General, and a new "Amateur First Class" would have taken the spot between General and Extra. Fortunately that idea was abandoned.

73 de Jim, N2EY

Nope, not really. It is about rules.

I just finally solved a problem I've had. These cars and those stupid *loud* stereo systems in 'em. An idiot parked outside my house (lovely day, around 70 and low humidity) and I was trying to eat dinner.

I finally decided that "rules" don't work (there is a noise ordinance here). So .... I turned Direct TV to the big bands and started cranking. All 5 channels are hooked to Bose speakers rated sufficiently to handle it. Several hundred watts. Normally, the TV is too loud at 8 and I usually run it at 6 for television and perhaps 7 for music.

I only had it up to around 35 or 40 when I knocked 4 pictures off the walls. The whole house was shaking. I left it there for about 60 seconds, then turned it back down. The idiot figured it out. Since his windows were also open, I suspect he got the drift in a hurry. I could no longer hear his car system ;)

As to the folks that are discouraged by encroachment on the ham bands, they should figure out that sporadic e on the 10 meter band can be fickle. If you hear a very loud signal, that doesn't necessarily mean you can interfere with his transmission as he may be talking to someone you can't hear and can't hear you. Wait till he stops talking, then turn on the RTTY. Even barefoot, you'll likely kill his reception. If he can't hear 'em, he can't work 'em.

It ain't the number of guns you have, it's who you shoot.
:)))

With all due regards from Rochester, NY
Jim

Sloppy, lazy writing style??? We're talking about a disability here.

So we've got a guy who claims to be perfectly fit enough to kick
anyone's ass on RRAP pulling down a disability check, and he's making
fun of people with a real disability, calling them sloppy and lazy.

Hey Steve, hey do you get those losers to hump your leg so readily?

You've got toad and bi-boi standing in line.

Yep. Tom hires a reader to read his scripts out loud to him which he then memorizes. Doesn't have to do any writing himself, either.

Some cure.

Meanwhile, you crucify a disabled person for not having the wherewithall to hire an assistant as Tom Cruise is able to do. You're a pig.

Steveo:

Ever since my buddy ronnie regan closed down the mental wards (nut houses) in california you have been harassing people at random. Give them a bit of a break son, do it for your president, your congress, your supreme court, your country and your fellow citizens.

I know you are a bit peeved about the lack of resources to handle you particular condition. Be patient, as soon as rummy and me can wrap up our little "death for oil" business venture in the middle east, perhaps we can squeeze out a few bucks and take care of you.

Just concentrate on holding together that declining mental condition of yours for another decade or so and we will get to you son.

Read my lips, "We will leave when we have the oil."

Steveo:

Now, now son, there is one hell-of-a-lot more freebanders and cbers
than hams.

Think about it like this, company is coming and you are going to have
to give up your room for a bit.

Do what is right for the country son, standing their sniveling in your
pink skirt you just look foolish, get a hold on yourself son, take it
like a man!

Here in america, son, people are empowered by their creator. We the
government have no right taking away the radio bandwidth which their
creator bestowed upon them.

I am afraid you are just going to have to learn to play well with the
other children and get along. Perhaps a freeband tech will help you
set up a station and get on the freebands and learn the ropes.

Do what is right for your country son. Your president is counting on
you to be a team player now, remember that.

I can handle either. Would you like to attempt a hertz conversion?

I've got a pretty good memory (and can remember most of your lies), and it was previously posted in Part 97 as 5.170 MHz.

The regs have been rewritten to allow for people who don't understand the bandwidth of an J3E or R3E emission. Congratulations. You qualify.

Don't believe me? Ask amateur historian Jim.

However it's restricted to stations (>>ALL<< FCC licensed
> stations...) in or within 50 miles of the State of Alaska, and is
> strictly for Emergency use only. One discreet channel. And it's not
> an "Amateur" channel. Amateurs are allowed on this frequency as an
> accomodation to safety.

Yes, that's what I said, "There's a frequency, I think 5.170 off the top of my head, that all amateurs in Alaska are allowed to use for emergencies."

Thanks for your unnecessary confirmation. You're Extra special.

> A real stretch to cite it as a "violation" of any treaty.

No stretch. It was the law. This provision has been in place since I've been an amateur (Jan 87), and don't know how far back it goes. Clearly a violation of S25 as No Code Techs were authorized to use it. The frequency was below 30MHz. No Code Techs (obviously) didn't have to show any proficiency in Morse Code. I think that pretty much unravels up your claim of stretch. It was a clear violation. Robber's Son desperate attempts fail to make an issue. bb prevails.

And it could easily be rewritten to read all licensed stations on U.S. soil, and within 200nm offshore. No?

Laura, bless her little heart, has a bad addiction to freebanding.
Jenna gets together in that whitehouse basement with that 50KW collins
linear and I don't see them for days. Like mother, like daughter I am
afraid.

Almost scarred the secret service to death with the stealth antenna
they were using (the whitehouse flagpole) melted and caught fire when
it shorted and heated up the coils with the 50KW. Just thank goodness
it is not against the law to burn a flag, yet. No one would like to
see their presidents first lady in prison (however, I do have a second
and third in the oval office, just in case :)

But hey, everyone has to have a hobby.

Very kewl. You figured it out, huh?

Time for a header change I see...

Warmest regards,
John

I've cashed government checks made out to "Brain." I think they're on
to something.

> BTW nobody gotta love Stevie just because you say so

Few could love Steve. My best guess is his overdominant mother. His
wife probably hangs around for his VA disability check.

Not so fast. Where is Steve's apology to Mark for making false
accusations of stupidity, and getting the "below 30MHz" wrong???

Fess up Steve. You got it ALL wrong. Admit it. Apologize.

W.V.? Do you live in O.H.? Oh, and I play the guitar.

If pointing out that Mark is bisexual is stalking him and pointing out
that he is a Pagan is stalking and if publishing his FCC address of
record is stalking, then surely you are guilty of stalking by even
mentioning that he is reading/writing impaired.

> What a bunch of misfits.

Well, you and the California gas bag certainly are.

I understand that Mark's dyslexia is also responsible for his
bisexuality, his Paganism and his fabrications about his past military
service. He's a real victim.

ok assbite. You crossed the line!!!

I just sent my net logs to my isp and had a rep on the phone.

Buddy, you just screwed up BIG TIME! This is my corporation's net, do
you even understand the implications of that? ROFLOL

Start hoping you proxyed though a bunch of isp's in third world
countries. Spoofing is one thing, using my corporations network
WITHOUT it's permission is a whole 'nother ballgame friend. That IS a
computer crime!

And, let'us hope you didn't do it across state lines huh? You really
don't need a felony on your record, do you? <grin>

Oh, and by the way, I just happened to find a little email bomb. Now
I wonder who put that there? And, where a net-trace on that mail will
end up. Oh well, maybe my people can help with that, huh? SEE YA!

Warmest regards,
John

Every ham I know in the area is either inactive, retired, or
disabled. The others moved out of the state when the Microdyne plant was
moved to Pennsylvania.

On the other hand, If I had charged them for repairs to their radios
over the last couple years that I was able to work I would have the
money to pay for a new roof.

It will happen, I just have to be patient. In the mean time I will
try to work in the 10' X 10' office in the back corner. I managed to
put the undamaged parts and tools in there. Now, if I can just arrange
it enough to set up a workbench.

One thing I learned in the electronic repair business was to never
take a check from a ham, cash only. Hams will always stiff you, but
I never met a freebander whose check did not clear. A Frebander's
check is always good.

I got some bad checks from CBers when I did 2-way radio and
commercail sound systems about 20 years ago in Ohio. I got even with
one jerk. He would put just enough in his checking account to pay his
rent and utilities so I waited till the first of the month to resubmit
the check. It cleared, and his rent check bounced. Boy, was he pissed!
;-)

After that, it was cash only, unless it was a commercial account.
Most of my customers were schools, churches and factories who didn't pay
in cash, but wouldn't write a bad check because you could file papers to
seize assets to cover a check and they weren't returned till the payment
was made.

But the truth remains, that cell phones often are not capable of
providing all the communications needed. If they aren't knocked out,
then the cell sites are overloaded with every cell user attempting to
make a call.

So how many have these 'certain very closely guarded codes" to use for
emergency? Do all emergency personell have access to these codes?

Hardly. How many emergency workers at the scene of a disaster have these codes? Probably none.
Ham radio is included in NORAD's emergency planning, cell phones aren't. Why? Because they know cells phones are practically useless in a real disaster.

What good do those 'very closely guarded codes' do if all the cell sites are down?

news:1120620904.081208.183040@g43g2000cwa.googlegroups.com...
Humm once again I ask has their ever been a time when Woger knew what
he was talking about?

Has Wogie ever worried about differing between fact and fiction?
It is doubtful he knows the difference. Even Roger doesn't like Roger, ergo
his penchant for speaking in the third person. Like that is going to fool
anybody.

When Wogie is accused of a wrongdoing one can judge how close one came to
the truth by the amount of vehemence in Wogie's denial.
For instance, "Wrong again, Asshole." That means the accuser was close to
the truth.
Or, "Prove Roger was ever in a mental institution." That means the accuser
was on the money.
Then there is, "Prove Roger ever beat his mother, asshole." Translation? The
accuser got him on that one.

Of course Wogie in all his brilliance usually follows up with a much
repeated and worn retort such as, "I see you still have that *****ing lisp."

If Wogie is anything, he has proven himself to be unimaginative,
resourceless, and predictably repetitive.

What's wrong with Pagans?

They're cute, they look like they're wearing tuxedo's, and are very
entertaining when we watch them at the zoo!

I'm a big fan of the Pittsburgh Pagan's hockey team....

> result, and I certainly am not spending an effort on plesing you

Thank God for that. I'd hate to be plesed, whatever that is..

> Grow up, get over it, move on

Get over what?

That you're an idiot?

How can I? You keep reproving it in every post you make.

> and please stop beating the dead equine

Then stop posting. Everytime you post you prove the "equine"
isn't dead!

> > Yours are in almost every sentence.
>
> I deny almost ervy sentence but tha is a quibble

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA! ! !
! ! !

> I don't deny making typos
>
> I don't deny making LOTS of typos
>
> Grow up, get over it, move on

Nope.

Get a spellchecker.

Get Hooked On Phonics.

Try to at least LOOK like an adult in writing.

> and please stop beating the dead equine

But the equine keeps posting.

> > You also have extremely poor grammar and sentence construction.
>
> not realy stevie, it is as other have agreed that I treat this medium
> DIFFERENTLY than you.

No...you are an idoiot.

> I don't see the Usenet as truely a written form sinc it is not
> inteneded for any formal purpose.

What you are is too lazy to fix your problem and foist it off on
the rest of us.

> I see it as more akin to spoken engligh

God forbid you talk like you write.

> Indeed I seem to recall other agreeing that reading my aloud and
> lsitening to it often clears things up

No, it doesn't.

But it does get me rolling on the floor laughing ! ! !

> You can choose to do this or not
>
> but you lack the right to dictate what I must do

I'm not dictating anything.

> > It's got nothing to do with dyslexia. It's got everything to do
> > with WANTING to be "special".
>
> Nope

Yep. You're lazy. You've been made to think that being "special"
is OK and that you don't have to try and overcome your deficits. It's
become too easy for you to be weak.

> Defferent perhaps. indeed if you are Normal Stevie I don't want it,
> would turn it down if offered

No. Lazy.

> Your concerns as near as I can see them disgust me.

Too bad. I think you need help.

> > Tom Cruise is dyslexic. He fixed his problem. You're just lazy
> > on several levels.
>
> he says he has

And judging by his bankroll and popularity, I'd say he has.

> Ok I am lazy on several levels

Many levels.

> Lazy is not a crime

Nope, it's not.

> If you feel it is chacter flaw the to you it is

What?

> Grow up, get over it, move on

Nope. You need to fix this. I'll keep on you as long as you post
in this forum and obviously need the encouragement to fix your problem.

> and please stop beating the dead equine

I can't. You keep raising your head back up.

> > Where did I say anything about paganism?
>
> Never said you did

Oh? You've accused me several times this week as "bashing" your
religion.

Are you now admitting that that was yet ANOTHER of your lies,
Mark?

> > > > > God please protect me form your (alleged) followers

Sure it is.

Walk up to a Priest or Minster and tell them you need to take a
####

> #### is ####

No...YOU are ####

> > It's easy enough to show people what an idiot you are without it.
>
> then do so without forging my words into soemthing else

I haven't. I simply choose to not wilfully repeat your profanity.

If anyone notices where I have "pound signed" your profanities,
they may, on their own volition, page back to see what it was you said.

> > > > And yes, you require guidance.
> > >
> > > nope esp not yours
> >
> > Yes...Anyone's. You need help. More than I could ever offer.
>
> realy another lie.

Nope.

> Anyone's Help? Ole Jeffery Dahmer perhaps?

If you can dig him up and resuscitate him, sure.

Maybe some cooking tips.

> > Anyone who admits, boastfully so, that he's a prolific liar needs
> > help.
>
> IYO just becuase you say it don't make it so

It's not because "I" said it...

It's because you need help.

> Let me quote from again from lost in space, "don't mistake my deception
> for a character flaw it is a philosical choice, a result of a profund
> understandering of the universe works"or words to that effect

"Lost in Space" is fiction.

Like you being a Colonel in the US Army.

And more evidence that you need help.

> perhaps by your standards I am in fact EVIL. I however am entitled to
> be evil in your eyes if I choose, that is what the first amendments
> means in part. It is something YOU SWORE an oath to uphold

There's nothing in my Oath as a Marine that is compromised by
calling you an idiot or hoping you'll seek help.

NOTHING in my Oath said "...and you must tolerate pathological
liars without comment"

> Fine go ahead and think that

I think you need help.

The only other persons in here who DON'T think you need help are
themsleves documented liars. Even the anonies see you for what you
are.

> > Correct.
> >
> > You do not see the consequences of your actions.
>
> You know this how?

Because you keep on doing it.

> strokes) since i returned to the newsgroup Made a couple of mistakes
> but that is ok One was assmuing it would take you more than a few hours
> to start up your gay bashing again, but everyone makes mistakes

No...Every post you make is strewn with mistakes...Not only your
utter rape of the English language, but your obvious loss of
situational awareness with reality.

> > If you did, you'd correct your behaviour.
>
> One, MY behaviour IS correct by the only standard that matter to me,
> mine

I am sure that Bundy, Gacy, McVeigh and Dahmer thought that too...

But see what it got them...?!?!

> Two, everything is proceeding much as I expected it to

You mean the part where eveeryone points a finger at you and
laughs uproariously?

> Can't you get it through your head that I am different than you.

Ohhhhhhhhhhhhhhhhhhh nooooooooooooooooooo....I get that part
juuuuuuuuuuuuust fine!

> Are you so narrow minded that you can't conceive that any would look at the
> world in other ways than you? I guess so, and then you have the nerve
> to call ME narrow minded

I don't tolerate liars.

You're not only a liar, but an admitted liar.

Your only plus is that you admit you're lying, which puts you
about 1/2 of a tenth of a percent over Lennie and Brian Burke.

> > You are in desperate need of adult supervision.
>
> IYO

In my PROFESSIONAL opinion.

> Grow up, get over it, move on
>
> and please stop beating the dead equine

Then stop raising your head.

Then you just lied again.

> > So let's hear it...
>
> Reatined In any service involontary, or having a reserve activation
> used as a threat to in negoating compesatiion, or haveing legal force
> used on a person to force their consent to something

You are NOT "retained" in service involuntarily by being drafted.
To be "retained" you have to already be there.

You've NEVER been there. The closest you'll ever get is buying an
old military uniform at the local "Army/Navy" store.

You do not "negotiate" compensation in the Armed Forces. They
establish a pay scale approved by COngress with certain other
occassional bonuses for enlsitment, re-enlistment or specialty, but you

either take what they offer or you don't.

And the draft does not "force" your "consent". You have the
option, with consequences, to refuse to be drafted.

You were never a member of, nor are you now a Veteran of, the
Armed Forces of the United States.

But you ARE a liar.

> > > go look up the Fetish Watersports, and don't complain about being asked

> > > > > there UNQUOTE

You posted pic's of your house in Illiopolis on your Geocities web
page, Mark. How long do you thik it would take anyone to find you in a

town the size of Illiopolis?

But your "Illiopolis PD" story was imaginative, anyway!

> > > an Oathbreaker (your service oath to the constitution)
> > >
> > > I dare you to recite that oath in here, Mark, and then provide
> > > some even remote substantiation of your claim.
> >
> > I dare you? what next you will double dog dare me

Nope. If I put two dogs in one room, you'd probably be doing
something unnatural with one of them and offering the other up for
sacrifice.

> I<name>sware to uphold and defend the constitution of the US and the to
> obey the offers put over me etc
>
> You derespect the Constitution.

You're a liar, Mark.

> You deny the rights of other to practice their faith unmoslested by you

Who? When? Where?

I've never "moslested" you at all. Nor would I.

> > Look it up, idiot. What were you saying about "carrying
> > baggage"...?!?!
> >
> but yo knwo I am lazy stevie you said so yourself

You've gotten one right today, Mark. Congratulations.

> > > But you lie I never insinulated your father was a thief I stated quite

> > >
> > > Lies, lies, lies, Markie.
> >
> > IT is not a lie that I have stated one of your male forefathers was a
> > thief

Nope.

Quick English Comprehension class, Mark.

By calling me "Robber's Son" you made my father the possessive
object.

Not my grandfather, nor great-grandfather, nor any other person in
my DNA string...Just my father.

> > I have only one father. He's deceased. His Amateur call was
> > N8DOS and it's still on QRZ. I dare you to get his name and run it
> > through NCIC
>
> ah NCIC now get it
>
> Forefather not 4 fathers you idoit

I think it's IRONIC that everytime you TRY to call me an "IDIOT",
you spell it wrong.

> Your ancestors if you now that word

Do what now?

> but I never said he was the theif

Sure you did.

What's a "robber" if not a thief?

> merely that either several generations back when your family got the
> anme His father was a thief

None of them apply since that's not the geneaology of the family
name.

> that is how names were given in english (and most other langs)

But not Robeson.

> MacNiel starts as son of Neil,
>
> Cooperson is son of a copper (barrelmaker)

Son of a copper what? A copper barrel?

> > > Roberson or robeson are coruptions of RobberSon look it up in the work
> > > of the Brothers Grim
> >
> > The "Brothers Grim" wrote tales.
>
> they recoded fairy tales and that is what they are best known for but
> Like, Heddy Lamar was best known as actress not an inventor, they were
> also linguists and wote most of the basic work in that field

But their writings, and what YOU cited, were tales.

Period.

> > "Robeson" is not a corruption of "Robberson"
>
> Prove it

Your assertion, Markie...YOU prove it.

> > Perhaps you should be doing your research somewhere other than in
> > children's fairey tales...
>
> Maybe you should know what you are talking about

I do.

And I know you should be doing your research some place other than
from fairey tales of the middle ages.

> > > > If you want to see "garbage", re-read all of the posts under your

Not on a USMC fitness report, Brain. Or I should be more precise,
not on a USMC fitness report while I was on Active Duty.

They add up the OS, EX, AA, etc, make a score, then add it up.
They establish a "cutting score" based upon a curve of all fitness
reports for the grade sought and the needs of that OCC FIELD at that
time, and you either make the cut or you don't.

That which you seek (my rank, promotions, etc) are public records
without the other data. Just as are the other records I've given you
information on.

And the rest will be forthcoming...Right after you pony up answers
to the questions that have been knocking on YOUR door for the last few
YEARS.

Brian P Burke is a chronic liar.

It really is THAT simple.

Singular??

743. Emergency communications

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-07 19:00:43 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <vZeze.231$cg.58@news02.roc.ny>
Source record: 112100

Hello, gang

From time to time arguments start over emergency communications. Usually, one big point is that cell phones provide all the communications needed.

I just received this in a group I belong to. Please notice the second sentence in the note:
********** begin copy of note**********
When you can't get in touch with your DD and there are
bombs going off where she works, I guess that that is
stress.

Landlines and mobile phone lines are down.

My dd finally emailed me. One of the bombs went off
near her place of work. She's ok.

I just got word from a very good friend that the
police might evacuate her building coz she is in the
mile square of all this activity.

Sp prayers please for all those in London who were
caught up in this horrible event.

Thanks.

Carol(England)

********** end of copied message*******

I certainly hope our friends across the pond will come out of this with little loss of life and the individuals behind those bombs are brought to justice.

That aside, do *not* count too heavily on cell phones (or land lines, for that matter) in an emergency.

73 from Rochester, NY

Ahh, but if you have certain very closely guarded codes, you can
get right through. Hams are still in denial that they stopped being
relevant a couple decades ago, but it is understandable that obese
old white men still want to hang on to memories of years gone by
and 80 lbs. ago. Truth is, go to any hamfest. The nachos and cheese
sell faster than cell phones. Yuk, those dried cheese stains you see
at hamfests always gross me out. CB radios are far more useful
in emergencies.

A false assumption promoted by Steve Robeson, K4YZ.

Of course, the cell phone is more widely available to the public than
your amateur radio. The cell phone may keep working just fine in
personal or small emergencies. The cell phone often works during the
initial stages of a larger emergency. In other words, the cell phone
can be extremely useful.

I'm going to guess that if she's OK, that "dd" doesn't mean "dearly
departed."

so what does "dd" mean?

Jim, rely on no SINGLE form of communications. Always have a back-up
plan.

Kindly poll the RSGB and get the number of amateur radio operators
(complete with portable radios) that were in the subways and busses
affected.

Thanks.

>
> Steve, K4YZ

Sounds familiar for the lower grades. For the top grades, there's a board. When the board members read their CINC's remark (sounds more like an order, doesn't it?), "Definitely promote," and there is a billet, the Definitely Promote gets it.

753. Steven J. Robeson K4YZ authorizes full review of his military records

> Where'd the rest of it go?

I edited it out as being redundant.

Your basic message was that the way to deal with
certain.....unpleasant items....that one may encounter,
is to simply avoid them completely, rather than picking them
up and fooling with them (which you refer to as
"polishing" - an illustrative description!)

This course of action is particularly appropriate
if the....unpleasant items....were intentionally
placed for you to find, in the hopes you would
react to them in a certain way.

That's really what you've been trying to tell me
all along, isn't it, Leo?

That course of action (avoidance) does make a lot of sense.

However, it occurs to me that the nature of
the...items...tells us something about the
person who created them.

If you encounter a watch, you would
logically conclude that it was made by a watchmaker.

If you encounter a loaf of bread, you would
logically conclude that it was made by a baker.

And if you encountered the....unpleasant items...
you describe as being unpolishable, you would
logically conclude that is was made by an

Never buy a HP or Compaq as you will not get any tech support. When I had to restore my system I found one of the disk in the restore set was bad. Never able to receive help needed to fix problem and HP didn't have the correct replacement CD. Ended up scraping system although it was only over a year old. NEVER BUY HP PRODUCTS.

>

You are correct; one cannot count on any one form of communications. Cell phones are *great* in a personal situation; I cannot imagine a more useful form of communications. The larger the area impacted, the more you need to rely on something that can communicate outside of the affected area. A direct to satellite cell phone might work well in such an instance, assuming that it does not suffer from traffic overload (not to mention the cost of owning such a device).

When 911 hit, however, things were a bit different. I was on AT&T and I lost my ISP for a week despite being over 300 miles away from NYC. Of course, the normal phones and cell phones worked (in Rochester) normally. AT&T had a major network in NYC and their service was affected considerably.

In the note that I copied, the dd refers, I believe, to diabetes dietitian. It was copied from a diabetes group which is international in scope.

You know as well as I that neither cell phone, cb, nor amateur radio will
work well (if at all) if you are in a subway far from an exit. Radio waves
do not fare well from underground nor under water ;)

Who's that?

BTW, did I mention repeaters suck?

The owners/control ops read whatever they want into
Part 97. I'm simplex only now. I told someone on
simplex last night that I wouldn't get on a repeater
now if a tornado was bearing down on me.

They wanted me to take over Skywarn, but since the control op
doesn't seem to like the way I communicate (fully in compliance
with Part 97), he wishes I wasn't on the repeater. He got his
wish. He didn't even have the balls to tell me. I heard it 3rd
party. The person that had been doing Skywarn isn't available
anymore in the afternoons, and they need a replacement. Well,
they f*cked themselves. It won't be me.

Good luck to them.

They're going to need it. The club is pissing people off left
and right, and no one is renewing their dues. Their hamfest
isn't working out, either. To tell you any more, you might be
able to figure out which club it is.

-Scott, KB3xxx

(ask in a private email with YOUR callsign)

I'm on simplex and EchoStink, once in a while.

Thanks Scott, but no need. I already have your real e-mail. I just didn't happen to notice it right next to the other one you have :))

>
> I'm on simplex and EchoStink, once in a while.

Haven't been very active on either Echo Link nor the local repeaters. I've got to change the memory backup battery on the HT. If I leave it off overnight, it looses its' marbles.

And my, have we come a long way from simply hooking up a modem To our rig haven't we?

Lessee, Split operation, perhaps 2 modems? Lotsa power, very high quality transmitter and PA, as well as a great soundcard. A marked sensitivity to phase distortion. At HF, it would be a very expensive system that would work on a good day maybe.

And it is a superior thing?

Makes BPL look like a masterpiece!

Roger that. I finally gave up on my HP S20 Photosmart scanner after sending it in for out of warranty repair (to take care of any hardware problem) and have it sent back with note that there isn't anything wrong with it. I also paid for and went through their tech support line with no success. I finally tossed it and bought a much nicer Epson Perfection 4870 that does double duty as a document scanner. My other HP flatbed scanner is gathering dust on a shelf. HP? Never again!

I can be silly too :))

I can use Canadian repeaters just fine from my HT with a whip antenna on it. No external power supply and no external antenna (beyond the whip attached to the HT). Oh, I'd best specify - that is from Rochester, NY, not up in Canada.

That is across Lake Ontario using only 6 aa alkaline batteries. I have no problem accessing Bristol Mountain either (located a bunch of miles away). Nor about 13 other repeaters in the area. Which gives me a reliable range of 40 or 50 miles (or more) in any direction to a repeater. Add a bunch more miles from there to a mobile or another HT.

Run your linear from your cb (with gas at $2.25 per gallon). See what you can hear on a reliable 24/7 basis. I do not have to contend with someone yelling "audiooooo".

BTW, I'm only 155 pounds and 5' 8" tall. No fat.

Troll, troll, troll your boat :)))

With all due regards from Rochester, NY
Jim AA2QA

Oh, my, now we can expect another 10- to 20-screen "reply"
consisting mainly of his chopping up paragraphs into
individual sentences and then committing ritual slaughter
on grabbing out-of-context inferences of selected sentences.

Tsk. Jimmie must have his basement coal bin filled with
old dried turds he is busy polishing, polishing, polishing
in order to admire his own reflection in them... :-(

But, there's a good side. He may insert a personal anecdote
of his doing with mentor Reggie Fessenden in '06 when Reggie
"set the standard for AM broadcasting" by sticking a carbon
microphone in series with a transmitter's antenna. [like
ANY AM voice transmitter does that now...]

Yawn.

>>
>He didn't say *not* on the same frequency either Sweetums. Now what?

Two questions:

1. What ELSE did John "*not* say?"

2. What are you going to say he "really said?" :-)

This is all very clever of you, but it really boils down to
YOU saying a lot of snit (that another didn't say) and then
trying to tap-dance around admitting you fudged things up.

Next time just accept being caught and hang up.

Do NOT try to MAKE UP STORIES to try and snow-job everybody.
It doesn't work and it annoys the other pigs.

>> FULL duplex IS possible using SEPARATE frequencies for
>> transmit and receive.
>>
>No kidding Sweetums I've done it several times myself. With my own
>equipment operated under my own operators and station license.

Mostly I think you "did it" with only your own computer and
more literary license than you ever earned. :-)

But, that's just my opinion...and with some considerable
thinking about HF operations that hardly EVER go FULL duplex,
senior. For one thing, the rather large near field at HF
wavelengths mean you NEED considerable separation of antennas
or the most bodaciously-many-section-dual-filter to keep the
unwanted frequencies (transmitter leaking into receiver) OUT.

That attenuation has to be VERY large in order to keep the receiver input from overloading.

Now, WHY would you want to go FULL duplex "operating under any license?" for personal use? You would need someone at the other end of the circuit doing the same thing...and that is an almost-extreme rarity.

Telephone Cell sites operate 24/7 at FULL duplex. They HAVE to and the equipment is designed to do that...such as separate transmitting and receiving bands with plenty of diplexing filter connecting the transmitter(s) and receiver(s).

The General Electric microwave terminals I've described used a (approximately) 5-foot long dual waveguide bandpass filter to keep separate transmit and receive frequencies from interfering with one another. The pulse-position-modulation pulse trains were not synchronous with one another, thus aiding in isolation. The peak power output of the transmitter was only 12 Watts (at base of antenna tower) yet the receiver was about as sensitive as one could get (using radar receiver techniques) of the 1950s.

If you are going to mumble about "your own moonbounce" (what is mistakenly called "EME" by hams), then you need not worry about mutual interference. A return signal won't return from the moon for about 2.5 seconds, long enough for you to manually swtich coax or waveguide between transmit and receive (as one of the early ham moonbouncers did and pictured in CQ long ago).

Or, you could go into broadband BS about using morse and auto-switchover Tx/Rx by fancy diode T/R switching...so much so that you could "read the other station between dots and dashes" like your buddie Jimmie once said in here. :-)

>But in your case of course . . <sigh>

In "my case" you are resentful/insulted/irritated because another had LONG AGO experience in something YOU DID NOT. <shrug> I've come to expect that in here from the self-propelled wunderkinder of the PCTA extra crowd. It's practically a given. :-)

(A) It's not a "band". It's five discreet channels.

(B) The mode restriction is due to other adjacent channel users
that we must dovetail with...Not due to any altruistic debate over
Morse Code use or testing.

> > The 5Mhz channels still fall below 30Mhz.

>
> Is it a newsflash to you that S25.2 has changed?
>
> There is NO LEGAL magic at 30Mhz there was but no more

Sure there is.

YOU need to read how it's worded.

The international treat gives individual administrations the
OPTION of requiring code testing.

Guess what...?!?!

The United States is in compliance with the treaty.

> > > There's a frequency, I think 5.170 off the top of my head, that all

Absolutely correct.

> and what I think you are referring isbad decision of the FCCto end
> thech vs thech plus license

They only eneded their admistrative tracking of it. The license,
in practice, still exisits.

> hopefully that mistake will be fixed

The FCC has clarly demonstrated that they are all about "less"
regulation and administrative burden...not more.

> > And WHAT common thread do each of those exceptions have in common
> > with the present Novice, General, Advanced and Extra class licensees?
>
> so?

"so?" was the wrong answer. You lose.

> Now on to turth

Turth? Is that near Intercourse, Pennsylvania?

> Nothing prevents the FCC from allowing hambands anywhere in the
> spectrum and assigning them to Tech class, and allowing techs without
> code tests to use them
>
> NOTHING but tradition perhaps

And nothing but it's current policy that takes advantage of treaty
language that gives administrations the priviledge of determining their
own course.

I DO agree that the FCC COULD have immediately enacted interim
"policy" that could have allowed licensees who pass the higher class
WRITTEN exams to exercise those privileges without the benefit of
passing Element 1 until it had been "officially" dealt with.

But they didn't, so it's still here. Oh well.

That's HERESY in this newsgroup! :-)

In this morning's Los Angeles TIMES, page one, is a story on
the London bombings stating that the estimated number of
cell phones in the USA is 192 MILLION now and about a third
of them have video capability. Network news on TV showed many
short video clips from the immediate disaster areas in London.

I have yet to see any TV news talking about "amateur radio
emergency communications" in the London area. <shrug>

No doubt someone in here will insist that all the video clips
are "fakes" because "everyone knows that cell phones go down
in any emergency." :-)

>> Jim, rely on no SINGLE form of communications. Always have a back-up

We can always count on the Amateur Emergency Corps to come
through with "CW" and the johnny-on-the-spot morsemen.

>When 911 hit, however, things were a bit different. I was on AT&T and I
>lost my ISP for a week despite being over 300 miles away from NYC. Of
>course, the normal phones and cell phones worked (in Rochester) normally.
>AT&T had a major network in NYC and their service was affected considerably.

AT&T divestiture was some time ago...:-)

"9/11" (the attack on the World Trade Center) was 4 years ago. NYC government communications managed to work through despite considerable damage to lower Manhattan Borough. <shrug> Area of damage was only a few square miles. You were 300 miles away?

The 1994 Northridge Earthquake was 11 years ago. I was IN it. Area affected was roughly 400 square miles. TOTAL primary electrical power was CUT OFF for about 10 million population. LA and surrounding incorporated city communications continued to function, local utilities' communications continued to function despite loss of primary electrical supply. Conspicuously absent was amateur emergency communications which arrived (for health and welfare messaging) AFTER the FEMA fly-away-terminals arrived and were functioning. I don't know if the cell phones "all went down" since I didn't have one then...but the wired telephones worked fine after the first two hours of subscriber panic was over.

BTW, the cell sites in the L.A. area are equipped with back-up power in case the primary electricity goes out. Central offices have had battery back-up since the year dot. AM and FM broadcast stations had emergency power generators and were functioning okay even if the personnel were a bit shaky.

In London and, earlier, Madrid, the government communications kept on going through bombings. Gosh, with the way so many in here talk, absolutely NOBODY but the hams had any comms at all! <shrug> BTW, Yurp has an even higher density of cell phones than the USA according to the L.A. TIMES story.

>It was copied from a diabetes group which is international in scope.

Tektronix is international in 'scope.

Sure does.....you can get a metal object, perhaps even a hammer or a wrench,
and tap Morse Code on the rails.

Come on Lennie the Loser......tell us why it won't work.

Why is it called 60 Meters? is 60 meters a discrete frequency?

> > (B) The mode restriction is due to other adjacent channel users

> > Morse Code use or testing.

Wrong answer. A CW signal would dovetail nicely given the allocated
bandwidth. So why not CW?

Gotta love those International "Treats." Better than smores.

The FCC's reply to the question was that S25.2 required it.
The PCTA's answer to the question was that S25.2 required it.

> > Guess what...?!?!
> >
> > The United States is in compliance with the treaty.

Arbitrary licensing requirements are still a problem.

The treaty no longer requires such arbitrary licensing requirements.

More Robeson Wrongness snipped.

> Brain...

Steve, anybody can have a MARS license and be inactive for years before finally being removed from the record for non-participation. Such a person may make claims to having held MARS calls, but should never make claims of having held a leadership position in MARS.

But you claimed to have held a leadership position in MARS/Okinawa, and you told us that you had no letter of appointment.

Were you lying then or are you lying now?

Your lack of knowledge of MARS indicates that you were:

a. lying when you said that you held a leadership position in MARS/Okinawa.

and

b. not lying when you said you had no letter of appointment because not having such a letter goes hand in hand with not having such a leadership position.

So are you now claiming that you do have such a letter?

Hi!

> Assuming they didn't find out sooner anyway...

The sad truth is that they'll realize that there are bad people in the world, and their father's role was to protect them from it.

I didn't say I had a "leadership position in MARS"...

I said I had a leadership position in a Marine Corps unit that
supported the MARS program on Okinawa.

> But you claimed to have held a leadership position in MARS/Okinawa, and
> you told us that you had no letter of appointment.

Nope. Just my orders to MCB Camp Butler for temporary FAP duty to
the MARS program.

> Were you lying then or are you lying now?

Neither.

> Your lack of knowledge of MARS indicates that you were:
>
> a. lying when you said that you held a leadership position in

> So are you now claiming that you do have such a letter?

No Letter. Orders. No, I don't have a copy of my old orders.
Nor do I have a copy of my orders to boot camp from the processing
station, nor do I have a currrent copy of my transfer to my last duty
station.

But those duty stations are part of the records I've refered you
to but you are too cowardly to write and find out about.

Over and over.

> Hi!

Hello yourself.

If that was supposed to be laughter, just remember, we're laughing
AT you, not WITH you, Brain.

> > Assuming they didn't find out sooner anyway...

The sad truth is they are going to read.

And read some more.

At first they'll be mad at me for having taken-to-task the man
they grew up loving and respecting. That's only natural and human
nature.

But so is curiosity.

Then they'll read some more.

They'll follow the crumps back to the source and they will realize
that you were, indeed, a dishonest and deceitful person who showed no
concern for his own reputation in public.

Then they'll start looking into other activities that you may be
involved in but have to date not mentioned here. No doubt they'll find
more to be ashamed of.

They'll always love you...they're your kids.

But they'll realize you are NOT that same man.

Shame on you.

Steve, K4YZ

> assmuning my silence is consent

Better turn to your "aprtner" for consent, Markie.

Every day you don't post here is like a day of sunshine.

> Gay bashers go ahead have fun while I am gone consider growing up

You're going to consider growing up...?!?!

Congratulations!

It's about time!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

I am going to wait with bated breath while you try to spin up an
explanation as to how you are not required to "be familiar" with the
regulations of the radio service in which you are a licensee, yet you
ARE required to obey them.... ! ! !

And by the way...Yes you ARE required to be familiar with Part 97.

Ask the FCC.

> > > I have seen fragment of this but in my reading of way part 97 recently

I am not "upto" anything, other than showing the world that, yes,
Mark C Morgan is an idiot.

But so far YOU keep stealing all my glory by beating me to it.

> > I am taking you to task for treating Hans so rudely then lying
> > about it afterwards.
>
> and Hans can't defend himself?
>
> I was rdue to Han's

Yes, you were.

> he was rude to me.

No, he was not.

> Why are (to use a comon figure of speech)you allowing your panties to
> get into such bunch over it?

Because you're so blatant in lying about it.

>
> which does not alter the FACT the answer was useless as given

Useless to YOU, perhaps...

Anyone else over 12 with an interest in Amateur Radio had no
problem with it.

> > You wanted spoon-fed, written in crayon answers.
>
> No crayon needed

Obviously you do.

> You take me to task when I don't answer your yes or no questions.I have
> the same right as you do

Actually, I consider you to have MORE rights than I consider
necesssary for myself.

Being an idiot is one of them. Being a chronic liar is yet
another.

Help yourself to them...They were made for you. They fit you like
a glove.

> > Hans' only mistake was assuming that you might be able to
> > understand the answer.
>
> gee Hans can't defend himself

He could quite ably if he chose to.

He just wouldn't enjoy rubbing your nose in your droppings as much
as I do, though...

> > > > Not slamming you, but Steve was not entirely remiss in his post.

> >
> > There's no "intent" on my part, Mark.
>
> If you say there was no intent on your part then we chalk up another
> lie. you intended something

Only in that you suggest something improper. My REAL intent was
to try and get you to spontaneously issue Hans an apology for your
smart mouth and abuse of his rendering of information to you.

Didn't work. My bad.

> > You asked a question. You got the answer. You then insulted the
> > respondant and called him a liar.
>
> yes I askeda question

Well...SORT of a question. One can never be quite sure where your
sentences start and stop, or if they were statements, quotes or
questions.

> No I did not

Lying again, Mark.

If you want to lie, got lie next your your "aprtnr" for a while.
Be sure to offer him some "Ben-Gay" first, though.

> I did rebuke the respondant (it is his place to ecide if he was
> insulted) rudely if you like

There was nothing to "rebuke".

The shortfallwas your own.

> Never called him a lair

Good thing, too...Because you'd already called him a liar. Just
one more thing might ahve set him off.

> > You were wrong on several levels.
>
> nope

Absolutely wrong on several levels.

> > You owe Hans Brakob an apology.
>
> IF he asks I will consider it
>
> But not on your say so

If you don't consider it pertinent to do so without his asking,
then you're obviously not sincere.

But then what else is new...?!?!

>
> That's it - you have it!

Of course it could be argued that what I was doing was
not "polishing" but pointing out the...unpleasant items...
but that's a minor issue. The decision to be made is the
same.
>
> >That course of action (avoidance) does make a lot of sense.

> very much at all!

Of course it limits my posts - to a very great degree. However,
that's not really the issue, is it?

The lack of "polishing" does not seem to have reduced the
production of said ...unpleasant items...though.

>
> Well done.

TNX

There's always the possibility that I might decide to
...point out...one of those....unpleasant items....

Who knows?

They didn't weight for a bunch of overwait ATVers to show up and do
damage assessments? What's the state of emergency comms coming to?

> I have yet to see any TV news talking about "amateur radio
> emergency communications" in the London area. <shrug>

Jims says the bus was underground and amateur comms would work. Not
even CW.

> No doubt someone in here will insist that all the video clips

Hi! Probably an Extra.

The act of getting the video out of the cell phone is the
communications.

Best of Luck next time, buzzed.

No, it means that I am still learning to function, in spite of my physical disabilities. I spent two years that I couldn't walk without help, and didn't have the strength in my hands to hold on to tools or lift anything over about a half pound. I have made a lot of progress WRT my recovery, but it appears that you will always be a useless pain in the ass. Just pray that you don't reach a point in your life where you would welcome your own death.

"Ignorance of the law is no excuse."

IOW, a person can be ignorant of the law, and yet they must obey the
law.

Or are you too ignorant to see that?
```

809. Re: Emergency communications

Source record: 112169
Cross-posted to: rec.radio.amateur.policy,rec.radio.cb

I think this is the first time I've ever heard anyone talk about CB in an emergency communications context.

I guess the police still routinely monitor channel 9 just about everywhere, but just about every square inch of North America is covered by 2m repeaters, too. I can only remember one occasion when I had to make an emergency call from the road. I didn't have a cell phone or a CB handy, but I did have a 2m mobile, and I was able to get in touch with a ham who called the police and fire departments for me. The repeater was about 30 miles away, and the ham was 75 miles away, but the state police are local everywhere.

I don't think ham radio has become irrelevant as a result of a few other services backing them up. You don't see too many CB'ers or cell phone enthusiasts conducting SETs or training with paramedics.

You can't count on hams to tell you where the speed traps are either.

What spin? It is a simple matter, obvious to anyone with a brain, ah
prehaps that does let you out.

Obeying the rules is all that is required.In the case of mode which
sparked this thread.

don't need to what number letter combination is USB in order to use
it, I push a botton on the rig and it does that for me

>
> Required by the FCC...Yes.

You show where the FCC requires it. by rules and paragraph

I am merely required to the USE the airwaves correctly. If i di by use
Tarrot definiation the FCC doesn't care.

If I ID every 5 minute or 9 minutes because i don't remember the FCC
requires it every 10 the FCC doesn't care

Indeed in large discussions I generaly id every transmisstion since it
might not get back around to me in 10 minutes

> questions.

then indeed if you can't figure it out you don't know wether or not you
understand it

>
> > No I did not
>
> Lying again, Mark.

I know the question even if you don't therefore ONLY I know if I got
the answer, you by your own addmission can't

>
> If you want to lie, got lie next your your "aprtnr" for a while.
> Be sure to offer him some "Ben-Gay" first, though.

Gee you know the gender of my partner? I have made a point of not
mentioning that takes a lot of typing in english.

Been stalking me more closely than I think or making stuff up again?

>
> > I did rebuke the respondant (it is his place to ecide if he was
> > insulted) rudely if you like
>
> There was nothing to "rebuke".

yes there was. his failure to answer a yes or no question

>
> The shortfallwas your own.

what?

Nope If i follow you then

you explain how a string of number s can be answer to "Is my impression
correct"

>
> > Never called him a lair
>
> Good thing, too...Because you'd already called him a liar. Just
> one more thing might ahve set him off.

If Hans lies i may well call him on it to date I have heard nothing I'd
clearly a lie. I have my doubts on some details of some of his stories
but I don't care enough to follow up

OTOH I don't care wether I set Hans off

BTW are you ever going to bother to learn to spell the word "Have"?

>
> > > You were wrong on several levels.
> >
> > nope
>
> Absolutely wrong on several levels.

not at all on any level

>
> > > You owe Hans Brakob an apology.

Not at all

Hans (nor anyone else) is entitled an apology where no offense was
intended with indaicating in some form he was offended

>
> But then what else is new...?!?!

another stveie falsehood

Is theire a manual of this fake socail rules or do you just make it all
up

as I said I'll consider apologizing to hans if he asks, but I apologize
to NONE on your say so Stevie

so?

>
> (B) The mode restriction is due to other adjacent channel users

> that we must dovetail with...Not due to any altruistic debate over
> Morse Code use or testing.

and I am as cappable as they are or you are of using USB on the bands
or channels or whatever you care to call em

since Morse Code is forbidden there there is NO logical reason that
Morse Code test should be required in order to operate there, or at
worst a tech liecnsee with CSSE for the general writen test, should be
able to operate there

>
> > > The 5Mhz channels still fall below 30Mhz.

>
> The international treat gives individual administrations the
> OPTION of requiring code testing.

yes I know that

but given the only legal barriar to assgining freqs was the treaty the
FCC was free to assign them to tech's

If they can do that then there is NO legal magic

Indeed as BB has pointed out Techs are allowed to operate below 30mhz
NOW which you claim is illegal

You go read the rules before you lecture others

>
> Guess what...?!?!

That is one way of looking at it.

BTW do you agree or disagree that whatever you said they did was a
mistake?

>
> > hopefully that mistake will be fixed
>
> The FCC has clarly demonstrated that they are all about "less"
> regulation and administrative burden...not more.

Then of course FCC should (from it's own point of view) go a one
license soloutaion
which would fix what I call a mistake

as would (as I understand the ARRL's proposal) the ARRL would fix this
by making all tech inclduing myself General License holder.

Thus I have hopes that this mistake will be fixed in some fashion

>
> > > And WHAT common thread do each of those exceptions have in common

Current Policy? You have reason to believe that S25.2 will be put back
into something like it older form

The treaty is LAW a part of the hisest law of the Land in the US (to
forgeiners well YMMV)

>

Actually, a lot has to do with the population density of a given area.

I suspect cb is much more useful in sparsely populated areas as you will
find few repeaters and even fewer hams. Of course, everyone (myself
included) love to give opinions on what works based upon their local
situation. Human nature, I suspect ;)

Support? billets? chow? laundry? Just how did you support the MARS
program?

Just as I suspected. You had absolutely nothing to do with MARS. No
wonder your ignorance vast ignorance shines through when you try to
speak authoratatively about MARS.

> > But you claimed to have held a leadership position in MARS/Okinawa, and
> > you told us that you had no letter of appointment.
>

50 watts and a 5/8 wave antenna does real good on VHF.
A lot better then one would assume unless you've tried it.

It took me two months to realize that I could hit places on VHF
that one could only dream of on 27 MHz.

I still use my CB. I also use my 2 meter.

Now, if our Gov't would get on the WRC03 bandwagon...

Hello, Scott

50 watts into a 5/8 wave would likely fetch you 80 or 100 miles (I'm
guessing here) on ssb or cw. You are starting to get into scatter a bit.
Of course, I suspect ssb stations (and cw) are very likely to be
horizontally polarized whilst fm is invariably vertical polarization. Using
the wrong polarization can result in a hefty loss.

Several hundred and a beam and you'd likely cover a couple of hundred miles
24/7 due to scatter. The signal won't be strong far out, but would be fine
on ssb or cw.

Of course, keeping the cb *and* the ham radio give you even more choices ;)

73 from Rochester, NY
Jim

>
> Nope.

have to admit it you were right when you said More than you could
offer, you have none to give therefore...

>
> > Anyone's Help? Ole Jeffery Dahmer perhaps?
>
> If you can dig him up and resuscitate him, sure.

more venom?
>
> Maybe some cooking tips.

ok Stevie you need help

>
> > > Anyone who admits, boastfully so, that he's a prolific liar needs
> > > help.
> >
> > IYO just becuase you say it don't make it so
>
> It's not because "I" said it...

yes it is

>
> It's because you need help.

nope I don't

>

> situational awareness with reality.

Yes and what you are saying has nothing to do with

BTw I did know was going to make mistakes in my posts

none of this shit says I did not forsee this in general terms

You have hardly suprised me nor has nayone else realy I knew what would
happen when I came and it has pretty much has gone as I guessed

>
> > > If you did, you'd correct your behaviour.
> >

> > mine
>
> I am sure that Bundy, Gacy, McVeigh and Dahmer thought that too...

yea

I even admire McViegh to a point he put his beliefs out on the line
pretty much

and Stveie thinks also I must live to his standards

>
> But see what it got them...?!?!

well Gacy seem to have met his needs for years not that familer ith
Bundy, Mcvigh I have addressed and Dahmer met his needs for his
lifetime for themselves they could have done worse

but putting me in there class is showing how sick you are

>

> To be "retained" you have to already be there.

I was and am for that matter

>
> You've NEVER been there. The closest you'll ever get is buying an
> old military uniform at the local "Army/Navy" store.

I am so glad you think so. I realy am makes me safer, and my family
safer

>
> You do not "negotiate" compensation in the Armed Forces. They

No you negoataite compensation as a civilian more distortionon your
part

> establish a pay scale approved by COngress with certain other
> occassional bonuses for enlsitment, re-enlistment or specialty, but you
> either take what they offer or you don't.

and none of which has anything to do with what I was talking about

using reserve status and threat to reactive in active duty and assugn
me the job if I don't do it as a civilian at thier offer of pay

>
> And the draft does not "force" your "consent". You have the
> option, with consequences, to refuse to be drafted.

That is mighty generous of you to admit you have imporved over the
years I guess

>
> You were never a member of, nor are you now a Veteran of, the

>
> You posted pic's of your house in Illiopolis on your Geocities web
> page, Mark. How long do you thik it would take anyone to find you in a
> town the size of Illiopolis?

in point of fact quite awhile, you ever seen the houses in that town

but more proof that you have been stalking me, that website has offline
for years and your still know about

checking out my house? and you claim not to be a stalker

>
> But your "Illiopolis PD" story was imaginative, anyway!

and you claimed to have proven that none called them asking the
question

your admissions have nothing to do with the call

>
> > > > an Oathbreaker (your service oath to the constitution)

No idoot they wrote down tales and they were linguists something youd
know if you were educated

I did not cite their fairy tales Stevie, I cite their sholarly studies
of language

>
> Period.

idoit

>
> > > "Robeson" is not a corruption of "Robberson"
> >
> > Prove it
>
> Your assertion, Markie...YOU prove it.

you are the one asserting here that Robeson is not a corruption of
Robberson you prove it

with your name SS#number I can't prove or disprove it in your case but
only in general

Besides is it so bad to suggest that you had a Robber in your family

My but you are touchy

>
> > > Perhaps you should be doing your research somewhere other than in

I am not currently a meber of the ARRL. The ARRL sent me a letter trying to get me to join.

First thing, they don't me by Name, they use my Call letters as if they were name, they are not

Summer asks that if you have "ways the ARRL has let you down to tel them

Tried about a week ago still not even a response of a form note to my email

You know this is not the way for the ARRL to get someone to join.

(Stevie you can save your typing I already know what you are likely to say)

It's probably a very nerdy thing we do, but most hams adopt
their callsign as a name of sorts. Of course used only in
ham radio circles. Also it makes a unique username for
accounts on ISPs, email accounts and internet forums.

830. Who needs the ARRL, anyway?

Newsgroup: rec.radio.amateur.policy

The ARRL is not a necessary institution these days. It is self-propagating, demands hefty dues and represents less than half of the licensed Amateurs in the United States.
Besides, what does one get for the $40.00 per annum (or is it more?) fee? A glossy magazine rife with advertisements? Admission to 'private' sections of the ARRL web site? A monthly 'bulletin' sent to your email address? (more spam)
Oh, wait. ARRL members get to vote on proposed rule changes, too. As if the FCC has ever given that much credence.

I guess there are still some old warhorses out and about who feel that it is a mark of distinction to have the ARRL logo on their QSL cards...especially those who boast of being part of the elite few, the proud, the Life Members.

One could likewise spend their Amateur Radio $$ on bigger and better things, such as paying good money after bad to join the Ten Ten Club, yet another wasteful expenditure of hard-earned money. Why not start a Twenty-Twenty Club? One could double the dues paid to the Ten Ten Club and claim twice the elitism.
The Twenty-Twenty Club could do as the Ten-Tenners do...refuse to speak with those not a member of their snooty group. Double the frequency, double the elitism.

CQ Contest, anyone?

> on ssb or cw.

I can get more distance with 50 watts VHF-FM then I do with a 2x455 box on 27 MHz local. With conditions, 27 MHz will work wonders. With tropo, I've worked 100 miles on VHF with the mobile antenna. With my portable 3 element beam, I did almost 200 miles.

There is a guy in DC that works FM horizontal. I can tell he's in there when I'm vertical. Since I can flip my beam 90 degrees, I can work him horizontal. What a difference 20db can make!

> Of course, keeping the cb *and* the ham radio give you even more choices ;)

Nothing like 19 on the highway, when the drivers aren't cussing too much.

> nope
>
> I did this years ago several times Indeed noone had the slightest
> trouble but you understanding

I understand fine. And you're wrong about anyone "understanding"
about your lies.

You misrepresented your status as a Commissioned Officer in the
Armed Forces. You lied about being drafted. You lied about serviing
in the "chemical corps".

Lied, lied, and more lies...

> > > > So let's hear it...
> > >
> > > Reatined In any service involontary, or having a reserve activation

Who'd hurt your family? Just more white trash on the "public
dole"...Who needs that...?!?!

> > You do not "negotiate" compensation in the Armed Forces. They
>
> No you negoataite compensation as a civilian more distortionon your
> part

No distortion.

YOU claimed to be a "Colonel".

You're not. You're a liar.

> using reserve status and threat to reactive in active duty and assugn
> me the job if I don't do it as a civilian at thier offer of pay

You don't qualify for military service on several levels. NO ONE
can be compelled to serve in the Armed Forces except by way of the
Selective Service, and they are not actively compelling military
conscription.

In other words...MORE LIES!

Mark, you keep telling ME to "stop beating the dead equine", yet
here YOU are trying to perpetuate a story that is so ludicrous as to
make one wonder what 8 year old hatched it!

> > And the draft does not "force" your "consent". You have the
> > option, with consequences, to refuse to be drafted.
>
> That is mighty generous of you to admit you have imporved over the
> years I guess

There's nothing generous here.

What's "here" is rubbing your nose in your lies.

And there's a lot of stuff for it to be rubbed in!

> > You were never a member of, nor are you now a Veteran of, the
> > Armed Forces of the United States.
>
> go ahead think that

I not only "think that", I KNOW that...

Big Snip

> > Nope.
> >

> >
> > No it can't
>
> Sure it does.

NO it doesn't simply being illogical or logical for that matter does
not afect the truth of statement

>
> You act illogically. Repeatedly.
>
> > Something has to true to be true.
>
> Absolutely. And it's true that you're illogical.

In your eyes perhaps

>
> "Not becuase you say so and not becuase it is logical or
> illogical"

The statement is perfectly logical, and absolutely true, of course it helps if you don't destroy the context of a statement. "Something has to true to be true. Not becuase you say so and not becuase it is logical or illogical " in full

NO I am fine no problem in need of fixing, The Help you think I need
would try (and suceeded long before we met) would focus on making me
conformatable with who I am. I am comfortable with who I am.

>
> > > > and please stop beating the dead equine

Stevie the only way you can change is to kill me, nothing less is going
to change my behavoir. I don't know you(don't want to) you clearly have
far too much of an ideology I have no respect for.

All you can do is harrass me without changing my behavoir

>

>
> Sure it is.

shit is merely a vulgarity

now for example godamned is a profanity

>
> > > Walk up to a Priest or Minster and tell them you need to take a
> > > #####
> >
> > why?
>
> Why not? You insist it's not a vulgarity.

I said nothing of the kind I said it is a not a profanity merely a
vulgarity, and for that matter if I had a reason I would certainly say
shit to preat or minister,

but more likely to say "fuck off" my normal response to efforts to
convert me, than shit

In the words of Good morning vietnam I'd say someone was for of shit.
Id never say take a shit the phrase doesn't work if you think about it.
One leaves shit not take it

>
> If it's not, you can say it in the presence of priests and ladies.

I can and will, and have but only the rigt phrases at the right time

you Know this how?

>
> You're lazy and arrogant. There's a difference.

and thank god I live nowhere that I might ever be brought to your
hospital for treatment

I am lazy and a touch arrogant, which does not of course mean I am or
that I am not diabled. Legaly I am quite disabled, and you swore to
uphold the law

>

You are a liar and a fraud.
Perhaps I have some issues you have a subscription to deal with (still
like that phrase stolen from Law & Order)

>
> > > You're not only a liar, but an admitted liar.
> > >
> > yep
>
> Sheesh.

Yes deal with it

and as the time comes I will teach my children to that there are times
to lie

>
> > > In my PROFESSIONAL opinion.
> >
> > you have no professional opinion Nursie
>
> Sure I do...And by acknowledging that I am a Nurse you contradict
> yourself.

you are not quailified to have one.

One nobody not even a doctor can dianose without meeting the pataint

Two, you are a nurse, and not a doctor

Three, you are in the lowest grade of Nurse

Four, your field are in the wroung field to make the judgement

so I don't contrdict myself

>
> > > I'm not harrassing you, nor am I lying about you. Nor am I

again mighty generous of you

>
> But if you do and I don't agree with your lifestyle, opinion or
> behaviour, >>I<< have the same rights YOU do to post my opinions about

> them.

Steve read the header someplace it say Radio and Amateur

My sexual orientation has nothing to do with either.

My religion has nothing to do with either

and yet you go and go about issues those issues and issues of my
religious philosophy

I can't recall your saying much about Radio of the ARS in weeks

>

> > > I do.
> > >
> > no you don't
> >
> There you go lying agin, Markie.

It is true you are NOT respecting the Fact I hold a different religion
and that the tenents of my faith don't include many things you hold
dear.

Honesty for example you claim it is vital, I that it is often dangerous
and to avoided

>
> Why are you lying?

I am not you simply don't understand what you are doing

If I were I lying though fine I is my right even you grant that it is
my right
why do you spend such effort trying to stop me from doing something
even you agree is my right

>

>
> No. Because decent people in a decent society don't lie like you
> do, Mark.

Assuming again

Next to pick apart your assumtion

central assumetion The US is a decent society, is something I reject.

In a Decent Society a person could publish his address without having
to fear being harmed for being dfferent

In a Decent Soceity diferences are tolerated

Next you assume I aspire to being decent in your eyes, I don't

Therefore from my point of view I am a person (decent or not) in an
indecent society, and I make my choices accordingly. I am lied too
everyday (unless I don't get out of bed and I don't turn on the TV), so
are you
>
> It's a slap in the face to good people.

perhaps if you like

> > safer
>
> Who'd hurt your family? Just more white trash on the "public
> dole"...Who needs that...?!?!

You are on the public dole not me. I make my own living, could be
better but good enough for me

You threaten to shot me, and if you'd gone through with it then it
would have been my father you killed not me. In those days I traveled a
lot and used my fathers address for mail and such did not live there

>
> > > You do not "negotiate" compensation in the Armed Forces. They

Seeing 50 & 60 year old men paste "ARRL Member" stickers
all over their cars, then go out on the highway and chase truck
drivers around to see what frequency they are on, has got to one
of the most hilarious things anyone has ever seen.

Tim

Tsk. Nobody can get such records (under the FOIA laws) without
proving that they should have them. Family members qualify and
recognized corporate personnel departments qualify and so do
law officers.

Meanwhile, without SOME corroboration from SOMETHING else besides
"his records," all he's got is a bunch of smelly BS. <shrug>

>> >> can be extremely useful.

Latest estimate in the Los Angeles TIMES of Saturday morning
(9 Jul 05) has OVER 175 MILLION cell phones among the USA
public. There are now MORE cell phone subscribers than there
are wired-line phone subscribers!

>Welp, that's just the way it is. Not everyone is able to walk around
>with their very own amateur radio communicator at their side.

A few previous PCTA extra stalwarts in here (now gone) used
to talk about "shack on a belt" denigration of HTs. :-)

>> In this morning's Los Angeles TIMES, page one, is a story on
>> the London bombings stating that the estimated number of
>> cell phones in the USA is 192 MILLION now and about a third

>> short video clips from the immediate disaster areas in London.
>
>They didn't weight for a bunch of overwait ATVers to show up and do
>damage assessments? What's the state of emergency comms coming to?

I'm still waiting to see what sort of Creative Writing the
ARRL is going to put on their "news" web page where ham
radio "went to the rescue in London" etc., etc. So far, the
network news and services have been mum on ham radio used in
this latest emergency over there.

>> I have yet to see any TV news talking about "amateur radio
>> emergency communications" in the London area. <shrug>
>
>Jims says the bus was underground and amateur comms would work. Not
>even CW.

No?!? Gosh, kinda puts the lie to "CW gets through when
nothing else will..." :-)

Ackshully, there's such a thing as a "leaky wave antenna"
that is used in Boston's "Big Dig" tunnels, the Los Angeles
Subway (yes, I know, strange concept that) system, and many
other places. With the right shaping and dimensions, a tunnel
can be a sort of waveguide above cutoff for high VHF and up.

>> No doubt someone in here will insist that all the video clips
>> are "fakes" because "everyone knows that cell phones go down
>> in any emergency." :-)
>
>Doesn't everyone know that?

Stebie might say it's a "LIE!" but then he says lots and lots of
things are "LIES!" :-)

>> We can always count on the Amateur Emergency Corps to come
>> through with "CW" and the johnny-on-the-spot morsemen.
>
>I thought I saw a few frames of a guy in a CAP flight suit...

With a moustache? :-)

Not to worry...in a couple years Stebie will be claiming He
Was There (with/without MARS).

>> BTW, the cell sites in the L.A. area are equipped with back-
>> up power in case the primary electricity goes out. Central
>> offices have had battery back-up since the year dot. AM
>> and FM broadcast stations had emergency power generators and
>> were functioning okay even if the personnel were a bit shaky.
>
>But they all used CW, right?

Yes, to most of them! "Continuous Wave" carrier with FM. :-)

>> In London and, earlier, Madrid, the government communications
>> kept on going through bombings. Gosh, with the way so many in
>> here talk, absolutely NOBODY but the hams had any comms at all!
>> <shrug> BTW, Yurp has an even higher density of cell phones
>> than the USA according to the L.A. TIMES story.
>
>All those people without any comms at all?

Yup...according to the MYTH in here. Whenever an emergency hits,
"ALL the infrastructure GOES DOWN, quits, becomes defunct, won't
work at all! The only thing that works is the radio amateur's
mighty morsemachine radio!"

Talk about peyote puffing...those mythmakers are dreaming harder
than ever...:-)

Well, if you were listening to something that boring to you, you
probably have enough sense to change to another repeater or turn the
radio off. James evidently can't do that. (I'm posting from my chair).

> in emergencies.

heh. try telling that to any EOC office in any county in the US. you'll be laughed right out of the office and probably hounded right to your car as someone who needs to go back to school.

you haven't been listening much on 11 meters of late, have you. its still filled with yahoo's of every description and there are nutcases on there that won't give a rats ass if you are in a life threatening situation. they'll just key right over you until you die.

by contrast, the amateur radio community has some well trained people (that training is provided at classes offered by officials of those very same EOC offices). if you call in an emergency on the ham bands, you are certain to get some useful help, even if it comes in the form of an old man or a young kid sitting at the other end of a multi-hundred mile linkup (it has happened before).

also, contrary to what you might believe, most of the phone systems aren't designed to have everyone in America on at the same time (which will most certainly be the case in a natural disaster or a man made one). regardless of the "codes" you speak of, if the system is busy, its busy and NOTHING you can do will get your call through any faster (and you'll just tie things up that much harder for someone with a real emergency anyway).

just because you don't like hams, doesn't give you the right to trash the services they offer, WITHOUT PAY and often at their own expense. can the same be said for the typical cb operator (without any formal training)? I say: NAY!

besides, the last ham fest I was at (williams Az), there were a lot of young and old hams there and not many of them would even match your description.

of course, we only have your words on what they appeared (at least to you). what the hey. you must need a white cane and dark glasses (you certainly

sound blind to the truth to me).

LENNIE!~ You mean there's a military acronym that you DON'T
know...?!?!?!

> >> > Were you lying then or are you lying now?
> >>
> >> Neither.
> >
> >Your stories just don't add up.
>
> His stories subtract from his credibility.

They're not "stories".

A "story" is a tale without substantiation or validation.

I've provided numerous references to verify what I've said.

Contrary to Brian P Burke's "stories".

> His stories multiply
> the massive amounts of wasted crud he claims. His stories can
> be divided into confetti by simple logic.

The "simple logic" is that you "CAN'T" disprove or rebutt my
references.

All you (or Brain and Markie) can do is TRY to blow enough smoke
in hopes that it covers your trail.

> >> No Letter. Orders. No, I don't have a copy of my old orders.
> >
> >In your own words, not having the paperwork means you didn't do it.
>
> ...and there we have it!

Nope.

The same orders are STILL in my SRB.

The same orders you can validate but refuse to do because it would
"take too long", as if you have anything BUT time...

> >Mr. Robeson, it is yours to prove. Remember, if you can't prove your
> >assertions it means it didn't happen. And that you're a liar. Your

> recognized corporate personnel departments qualify and so do
> law officers.

However certain parts of military records ARE researchable.

You refuse to do it because the results would be humiliating for
YOU.

And under "(my) rules, as you suggest, Brian P Burke >>IS<< a
liar, since in several YEARS of requests to do so, he's not ONCE
provided so much as a hint of ANY validation of ANY claim he's made.

Lennie's not far behind. Still wondier what HIS "station" looks
like...He's tried to humilate everyone else who's dared show a picture
of ANY kinf of radio.

> Meanwhile, without SOME corroboration from SOMETHING else besides
> "his records," all he's got is a bunch of smelly BS.

Nope.

References provided. Can't help it if you won't avail yourself of
them.

> <Stebie making some "threat" about Brian's children...>

What "threat"...?!?!

> >> > The sad truth is that they'll realize that there are bad people in the

It's "illogical" because it says absolutely nothing.

It's several multisyllable words in what APPEARS to be a sentence.

You are now, have been and shall continue to be the "court jester"
of RRAP as long as you refuse to do somehting about your fractured
English and alleged "dyslexia".

And as long as you do continue to refuse to fix the problem, don't
fuss at people who laugh at you for looking like an idiot...

I know of no emergency service agency that would so quickly dismiss
the potential of CB radio.

Sounds like what was said about the people of NYC before 9/11.

>by contrast, the amateur radio community has some well trained people (that

>happened before).

Do the math: According to info on the net there are about 650,000 hams
out of roughly 300,000,000 people in the US. So each ham must be able
to handle emergency traffic for 461 people, assuming every station is
willing and able to operate during an emergency. But that isn't the
case. So just to make the numbers a little more realistic, let's say
that only one out of every five hams can be up and running off the
grid (assuming all the hams in the zone survive the disaster). The new
ratio is 2300 people per ham. Now how many people know (or can find
out) where their local ham resides? Not many, I'm sure. Let's say one
out of ten. So that ham isn't much help unless the station is mobile.

How many hams are mobile? Oh heck, let's just say half (and that's being generous). So there needs to be -two- hams for -4600- people; the base-bound ham handles 460 people while the mobile ham has to drive around looking for the other 4000+ potential victims of the disaster. Now.... are there at least 65,000 hams in the US that are both trained and capable to handle emergency communications for over 4000 people? Nope. I doubt there are -ANY- hams capable of handling that kind of traffic.

And historically, what do hams -really- do during a disaster? Some establish comm nets that are rarely used, while others take advantage of the opportunity to make "disaster-zone QSLs". That's about it.

In contrast: There are -way- more CB radios than ham radios; Most CB radios are mobile; Many CBers have more than one radio, and extra radios can be quickly installed in a vehicle; CB radio is a popular mode of communication with 4-wheelers, and 4x4's come in mighty handy in many types of emergencies; Most CB antennas are easy to spot even by non-CBers; CB radios are readily available to emergency services; CB radios are insanely easy to operate; etc, etc, etc. And believe it or not, CBers can and do organize quickly and behave appropriately during an emergency, a fact which has been proven many, many times.

But ham radio -does- have a place in emergency communications -- as a communications infrastructure backup for extreme situations such as a nuclear holocaust, a large asteroid impact, a super-volanic eruption, or some other calamity that may happen on a continental or planetary scale. Until that happens, hams will just have to learn to live with the fact that, since the early 70's, CB radio has played a much larger role in disaster communication than ham radio, and will continue to do so in the future.

>also, contrary to what you might believe, most of the phone systems aren't

Have you ever heard of anyone trying to capitalize on a disaster by selling CB operator services? I haven't. Too bad the same can't be said for ham radio.

>besides, the last ham fest I was at (williams Az), there were a lot of young
>and old hams there and not many of them would even match your description.

Then you should have looked in a mirror. The point is that many hams carry an elitist attitude that is just as visible (and offensive) as dried cheese stains on a XXXL T-shirt stretched around a flatulating Republican.

>of course, we only have your words on what they appeared (at least to you).
>what the hey. you must need a white cane and dark glasses (you certainly

What's a "turth"..?!?! Some pagan worship idol?

> > > get over your obsession with me
> > >
> > You flatter yourself, Markie.
> >
> You answer every word I post that is obsession

You don't pay attention. That's stupid.

> and it is not flattery

It's flattery when you think that ANYONE needs to "earn" respect
with you.

You're an admitted liar and sexual pervert. No one need prove
anything to you.

> > > > Yep. You're lazy. You've been made to think that being "special"

Absolutely.

Whoever suggested that to you lied to you, Markie.

I am a wage earner. More than my fair share of 40 hours a week, I
might add.

> > > > > > Tom Cruise is dyslexic. He fixed his problem. You're just lazy

>
> idoit, ignorant cracker

There you go with "idoit" again, Markie.

Just the day before yesterday you insisted you don't mispell that
when you use it "against" someone. Wheelp...You've blown it every
single time so far.

And "ignorant cracker"...?!?!

Hmmmmmmmmmmmmmm...You insist that YOU are not a bigot, yet here
you are using a racial epithet.

And you call me "ignorant" in the same sentence where YOU mispell
"idiot"...

ROTMFFLMMFAO!

> > > no I don't you need to get a life
> > >
> > Huh?
>
> what part of get a life don't you understand?

The part where you run all your words together without sentence
breaks or punctuation.

> > > I have no problems in need of fixing. I am fine just the way I am
> > >

> > Yes you do and no you aren't.
>
> NO I am fine no problem in need of fixing

You are wrong.

> The Help you think I need
> would try (and suceeded long before we met) would focus on making me
> conformatable with who I am. I am comfortable with who I am.

I see you've been to counselling before.

Too bad it didn't work.

Is that why you left Illinois? In any case, no MHCW worth their
salt is going to let you be "comfortable" as a sexual deviant and
admitted liar.

> > > in that post you had not said anything about pgan sim and i pointed
> > > that out now you fraudulently hack the post to take it out of context
> > >
> > > Fraud
> >
> > What's "pgan sim"...?!?!
>
> you are a fraud and a forger

That's how you answer the question "What's a "pgan sim"...?!?!

And no, I am not a fraud and forger.

> > You've made several assertions that I have said I "am" certain
> > things and I've asked you repeatedly to show where you get that from.
>
> and i have done so

In your imagination, perhaps. But not in THIS forum.

> more than you have shown anything about your Conections to Mars or
> your promotions of your great action hero stuff

Mars? I've never been to Mars. Seen it through a telescope,
though.

And "great action hero stuff"...What are you talking about?

> #### is merely a vulgarity

It's merely unacceptable.

> now for example ########## is a profanity

No...that's a blasphemy.

> but more likely to say "#### off" my normal response to efforts to
> convert me, than ####

Who'd want to "convert" you...???

Not me.

I wouldn't want a liar of your magnitude in any place of worship
that I was in, even though you sorely need the help...

> In the words of Good morning vietnam...

It's not "...In the words of Good morning vietnam..." It's
"...from the movie Good Morning Viet Nam"

And do you have ANY real-world quotes you like? Or is this
evidence of your lay-about lifestyle...

> well you missed the parts about minding yuor own busness...(SNIP)

You post in a public forum, it becomes "my business".

> (UNSNIP)...and and being
> polite, you were never polite, still are never polite to anyone you
> adress in here

That's a blatant lie.

> you also did not learn not to forge peoples words

I haven't forged anything.

You need to get a Webster's and use it from time to time,
Markie...Either that, or public a Markie-to-English

> > > > I haven't. I simply choose to not wilfully repeat your profanity.
> > >
> > > nope you are altering my post and others
> >
> > Nope. I choose to not retransmit your profanities.
>

Nope. They're still there for all to see. Just not under MY
hand.

> > Anyone that wonders what you said can back up in Google and see
> > what it was.
>
> but none one should have to

No one should have to see themm in the first place, but you insist
on acting like a foul-mouthed 5 year old in an adult forum.

> > I'm neither harassing nor srtalking you.
>
> you are harrassing me and stalking

Nope.

You come to this forum and post here of your own volition. To the
best of my knowledge, no one tied you up and forced or coerced you to
come here.

> > You're not disabled.
>
> you Know this how?

By reading your messages here.

> > You're lazy and arrogant. There's a difference.
>
> and thank god I live nowhere that I might ever be brought to your
> hospital for treatment

Sure you do.

My license allows me to practice in Michigan.

> I am lazy and a touch arrogant...(SNIP)

Don't underestimate yourself, Mark. You're hugely arrogant.

> which does not of course mean I am or
> that I am not diabled. Legaly I am quite disabled, and you swore to
> uphold the law

And my Oath in the Armed Forces has nothing to do with rubbing
your nose in your lies and deceit, Mark.

> "BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHA"
> >
> if you will please keep the line length to a screen width otherwise it

> > "meeting (your) needs"...?!?!
>
> Nope never said that, never said anything about logic about about
> murder being ok

Sure you did...

You said "...well Gacy seem to have met his needs for years..."

His "needs" were to murder young men.

Your post suggests you find that OK.

Are you willing to clarly state that murder and anyone who murders
is abhorrent?

> > Read the sarcasm, blockhead.
>
> then get it through your head I don'tshare your sense of moral values

Oh, I get that...

You don't share the idea that honesty and trustworthniess are good
moral values.

No problem.

> You are a liar and a fraud.
> Perhaps I have some issues you have a subscription to deal with (still
> like that phrase stolen from Law & Order)

More TV-land quotes.

Is there ANYthing you do in "the real world"...?!?!

> > >
> > > you have no professional opinion Nursie
> >
> > Sure I do...And by acknowledging that I am a Nurse you contradict
> > yourself.
>
> you are not quailified to have one.

Sure I am. I have a professional license.

> One nobody not even a doctor can dianose without meeting the pataint

No one has "diagnosed" you with anything.

> Two, you are a nurse, and not a doctor

Uh huh.

> Three, you are in the lowest grade of Nurse

Not quite.

> Four, your field are in the wroung field to make the judgement

No I'm not.

> so I don't contrdict myself

Sure you do. Repeatedly.

> > > > I'm not harrassing you, nor am I lying about you. Nor am I
> > >
> > > You are harrrasing and lieing baout not harassing me
> >
> > I'm not harrassing you, Mark.
> .
> sure are

Nope. You came here. I didn't come looking for you.

> > Nor am I lying about you.
>
> you are big time

Nope. Not one word of it untrue.

> > > which means you are admiting to distorting my point and taking it out
> > > of context
> >

> > If you could really comprehend English well, Mark, you'd
> > understand why that looks so stupid.
>
> to you I am sure it does, doesn't mean #### though

Sure it does. It means you don't comprehend English well. And
it's not what I think...It's what you demonstrate in this forum.

> > There you go lying agin, Markie.
>
> It is true you are NOT respecting the Fact I hold a different religion
> and that the tenents of my faith don't include many things you hold
> dear.

> Honesty for example you claim it is vital, I that it is often dangerous
> and to avoided

But not because you claim to be a pagan.

Because you're an admitted liar and deceiver.

> If I were I lying though fine I is my right even you grant that it is
> my right
> why do you spend such effort trying to stop me from doing something
> even you agree is my right

Because it's MY right to address your lying in a public forum.

That's MY right.

> > No. Because decent people in a decent society don't lie like you
> > do, Mark.
>
> Assuming again
>
> Next to pick apart your assumtion
>
> central assumetion The US is a decent society, is something I reject.
>
> In a Decent Society a person could publish his address without having
> to fear being harmed for being dfferent

Who's harming you?

I've never touched you..Wouldn't either. There ARE things in this
world I would kill or maim for.

You being a lying punk isn't one of them.

> In a Decent Soceity diferences are tolerated

Differences are.

Lying and deceit are not.

> Next you assume I aspire to being decent in your eyes, I don't

I only assume that you understand that if you're going to keep
trying to make an issue of what your "rights" are, I am going to use
those SAME rights.

If you don't like them, all I can say is YOU have a problem.

> Therefore from my point of view I am a person (decent or not) in an
> indecent society, and I make my choices accordingly.

Society is "indecent" only where decent people allow it to be that
way (Or where indecent people choose to try and make it that way...).
Unfortunately it sometimes takes a slap in the face, directly or
otherwise, to get people to defend that society or lose it.

Weak gene pool individuals such as yourself contribute to that
indcent society.

> I am lied too
> everyday (unless I don't get out of bed and I don't turn on the TV)...(SNIP)

You forgot "...or look in the mirror to shave..."

>so are you

Yep.

Difference between you and I is that I do my best to not tolerate
it.

> > You're not "good people", Mark
>
> already said I am not I am by your standards EVIL fine

I never said you were "EVIL", Mark...

Please remeind me who was calling who a "forger" here...?!?!

> > How? Have you ever served in the Armed Forces? Where were you
> > stationed? What rank did you obtain? What MOS did you hold?
>
> 53E trained at Ft McCellan AL, served active Duty Ft Sill Ok Ft Hood
> and FT Bliss TX did TDY Sawyer AFB (which is why I finaly moved up here
> loverly area) was discharged for active Army joined the Nation Gaurd (I
> will not say what state except it wasn't Illinois or Michigan),
> answered questions about rank

Still a lie. No matter how many times you re-state it.

And the only "rank" (other than 'very') You've ever claimed was as
a Colonel, then LT in the "Chemical Corps"

You are not a Veteran in ANY branch of the Armed Forces.

> > No you don't. See what lying does, Mark? Now you actually
> > believe your own lies.

>
> not altogether a lie, but enough lies in mortar that you can't (more
> importantly others can't) find me

Mark, if I wanted to "find" you, you'd be no more than two phone
calls away from a knock on your front door. Don't delude yourself.

> > I understand fine. And you're wrong about anyone "understanding"
> > about your lies.
>
> no you still don't understand but is in some ways good

I understand fine.

You're a liar and deceiver.

Not to be trusted under ANY circumstances.

> > You misrepresented your status as a Commissioned Officer in the
> > Armed Forces. You lied about being drafted. You lied about serviing
> > in the "chemical corps".
>
> never lied about being drafted...(SNIP)

Lie.

> never leid about being in Chimical corps.

Lie.

> I did tell lies to devirt a threatening stalker about my rank

Lies, lies and more lies.

Lies to cover up lies about lies.

> > Lied, lied, and more lies...
>
> and you can't tell the truth from the lie which I have done well in my
> purpose

Adding up lies is like adding up zeros, Markie...

> > Who'd hurt your family? Just more white trash on the "public
> > dole"...Who needs that...?!?!
>
> You are on the public dole not me. I make my own living, could be
> better but good enough for me

There's that "public dole" thing again.

Who told you I am on Welfare?

> You threaten to shot me...(SNIP)

It's "shoot me", and no, I didn't.

> (UNSNIP)...and if you'd gone through with it then it
> would have been my father you killed not me. In those days I traveled a
> lot and used my fathers address for mail and such did not live there

You think I'm not able to discern between a punk in his 30's as
opposed to someone your father's age???

> > YOU claimed to be a "Colonel".
>
> yep but that has nothing to do with the issue

Sure it does. The "issue" is that Mark C Morgan is a pathological
liar.

That you purported to be a Field Grade officer is evidence of it.

> > > using reserve status and threat to reactive in active duty and assugn
> > > me the job if I don't do it as a civilian at thier offer of pay
> >
> > You don't qualify for military service on several levels. NO ONE

> > Selective Service, and they are not actively compelling military
> > conscription.
>
> wroung even you can recalled I believe, and I could find some folks in
> Iraq that would deny your statement

Hot flash, Markie....

There's not a single Soldier, Sailor, Airman or Marine in Iraq
that's not a volunteer.

They may not LIKE being there, however not a single one of them
was compelled to join the Armed Forces.

> > In other words...MORE LIES!
>
> nope

Yep.

> > Mark, you keep telling ME to "stop beating the dead equine", yet
> > here YOU are trying to perpetuate a story that is so ludicrous as to
> > make one wonder what 8 year old hatched it!
>
> no you are perpetuating it
>
> You brought it,
>
> you keep on about it
>
> I am merely trying to answer you
>
> If you drop it it goes away

What goes away?

If I stop replying to you you'll stop lying?

The truth is that if I "drop it", you'll get to go on with your
lying and deceiveing.

> > > > And the draft does not "force" your "consent". You have the

I'm not.

But I AM laughing at you...

Again...

> > BBBWWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

> prehaps that does let you out.

It IS a spin, Markie...

Answer my question, please...

How do you comply with the regulations if you aren't "familiar"
with them...???

> Obeying the rules is all that is required.In the case of mode which
> sparked this thread.

How do you comply with the regulations if you aren't "familiar"
with them...???

> don't need to what number letter combination is USB in order to use
> it, I push a botton on the rig and it does that for me

How do you comply with the regulations if you aren't "familiar"
with them...???

> > And by the way...Yes you ARE required to be familiar with Part 97.
> >
> > Ask the FCC.
>
> Nope

Uh huh...about what I figured...

> > > > You can be expected to at least know where to find the information

> > > expected sure I am expected by you to do lots of stuff
> > >
> > > Required no
> >
> > Required by the FCC...Yes.
>
> You show where the FCC requires it. by rules and paragraph

The line on the back of your license where it says you will abide
by FCC rules and regualtions as thhey pertain to your Amateur Radio
station.

> I am merely required to the USE the airwaves correctly. If i di by use
> Tarrot definiation the FCC doesn't care.

Sure they do.

Show me a Tarot (...not Tarrot) card deck that has Part 97 in it.

> If I ID every 5 minute or 9 minutes because i don't remember the FCC
> requires it every 10 the FCC doesn't care

The FCC doesn't care if you "ID" once a minute...As long as there's
no more than a 10 minute interval between them.

Then they care.

Read recent FCC NOV's and NAL's...Read the ARRL's webpage that
cites letters sent to Amateurs who violated that very paragraph.

> Indeed in large discussions I generaly id every transmisstion since it
> might not get back around to me in 10 minutes

If you didn't cause RF to be emitted, it doesn't matter.

> > > BTW exactly where are they defined by paragraph Oh font of Knowledge
> > > rival of the Oracle of Delphi
> >
> > Where are the rules defined by paragraph?
> >
> > Try Part 97 you blithering idiot!
>
> Stevie thinks Part 97 is a single paragraph

The rules ARE defined in paragraphs in Part 97, Markie.

If you meant only ONE paragraph, that was due to YOUR failure to
effectively express that thought...

Maybe a gradeshcool English writing course would help you...

> Instaead the turth is you up to stalking and harassment but everyone
> (except perhaps you) knows that

Nope. You came here. No one forced you.

> > But so far YOU keep stealing all my glory by beating me to it.
>
> Then shut up if showing me an idoit is your sole goal and you you feel
> I am beating you to it

There's that "idoit" thing again.

You're holding at 100%.

> You just manged to prove YOURself a lair

I am not a lair. Nor am I a liar.

> > > > I am taking you to task for treating Hans so rudely then lying

> >
> > Yes, you were.
>
> and you say Hans can't defend himself?

Nope. That's YOU "forging" my words.

> > > he was rude to me.
> >
> > No, he was not.
>

> Yes he was. Only I can decide what I consider rude treatment

No. Society can set the parameters by which rude treatment is
determined.

In no way shape or form did Hans cross that line.

YOU did, however....

> > Anyone else over 12 with an interest in Amateur Radio had no
> > problem with it.
>
> a hyperbole at least, I can at least one other person other 12 with an
> interest in Ham radio hwho did not understand it

I think they need to disperse flyers in your town warning them
about you...No one should allow a 12 year old alone with you.

> Then if you "grant" me these "rights" why do you haraas me for using
> them?

I don't "grant" you anything.

> > Help yourself to them...They were made for you. They fit you like
> > a glove.
>
> Then grant me the rights you say I have and get on the topic of Ham
> Radio, instead of people bashing

I am not people bashing.

> > > > understand the answer.
> > >
> > > gee Hans can't defend himself
> >
> > He could quite ably if he chose to.
>
> then let him

But I am having such fun showing you for the rude creep that you
are.

But it's easy fun...You don't make it much of a challenge.

> > He just wouldn't enjoy rubbing your nose in your droppings as much

You should.
>
> BTW are you ever going to bother to learn to spell the word "Have"?

Lessee.....

I OCCASSIONALLY transpose "h" and "a"...

As opposed to your near-every sentence errors?

That's a load!

BTW...Getting your "partner" to do your writing lately?

> > > > You were wrong on several levels.
> > >
> > > nope
> >

> > It's all PFM for the followers of St. Hiram.

I follow the FCC, and they say it requires an Amateur license to
operate on those "channels". Those channels fall below 30Mhz. The
present ITU document that facilitates international amateur radio
regulations permits individual administrations to test for Morse Code
competency for access to HF.

The United States still requires Morse Code testing for access to
HF.

> > > YOU need to read how it's worded.
> > >

There you go lying again.

I very specifically delineated under what circumstances "Techs"
may operate on HF.

> > You go read the rules before you lecture others

I have.

You're the one with the comprehension deficit.

> Hmmm? I don't think so. Tech's with a 5WPM Farnsworth CSCE can.

There's no "Farnsworth CSCE" in existance, Brain.

> > > Guess what...?!?!
> > >
> > > The United States is in compliance with the treaty.

>
> I didn't see you say otherwise either.

Sure he did.

When he said that there was no longer a treaty that permitted code
testing.

He was wrong.

Good job and slapping of the troll was a worthy read.

Talking of doing work for NO PAY, and BTW very very little recognition. Check out Hurricane Dennis. The hams in Florida, Alabama, Mississippi, Georgia, Louisiana and points further North played a major role in saving lives and fortune.

And guess what? Ain't no one said a good thing yet. Amazing.

But that's alright. We don't do it for the fame and fortune. It's just the right thing to do.

I did a thorough search, Markie...You didn't serve.

And you were too stupid to already have a "fake" name in place
when I joined RRAP.

> yougot nothing on me so I would not get anything on you

I got nothing on you because there was nothing to get.

You would fare better.

> > You refuse to do it because the results would be humiliating for
> > YOU.
>
> it would be embarrashing to waste time that way on a wild goose chase

Nope.

It would be embarrassing for you to see that I had been telling
the truth all along.

> the implied to contact them

Oh make no mistake, I don't paln on nor will I "contact" them
before they are each age of majority.

However they are going to get an eyeful of thier father's
misbehaviour and dishonesty if they ever do a Google search for "Brian

Burke", N0IMD, etc.

> > They'll see the man they loved in a different light...An

"repating" what "theats"...???

Your "partner" have enough of typing your RRAP positngs
today...?!?!

> > > >Doctor Robeson, heal thyself.

nope it isn't

>
> Answer my question, please...
>
> How do you comply with the regulations if you aren't "familiar"
> with them...???

well the regular you are referring to by punching the botton on my
radio, Yeaszu and FCC have seen to it that it generates legal types of
signals wether i know the letter codes or not

My rig will not tranmit out band so I am covered there

>
> > Obeying the rules is all that is required.In the case of mode which
> > sparked this thread.
>
> How do you comply with the regulations if you aren't "familiar"
> with them...???

several methods are possible such apllaince operating

not operating also insures I don't break the rules

one could count on simple luck (not wise but possible)

I am sure there are additional examples

>
> > don't need to what number letter combination is USB in order to use
> > it, I push a botton on the rig and it does that for me
>
> How do you comply with the regulations if you aren't "familiar"

oh I see what you mean now took you long enough to say what you mean
(if you are saying what you mean now) Then you have been chasing a wild
goose form moment one in this thread since of course If aplogize to
Hans now you will not consider it sincere, so logicly thier is
certianly no point in my doing so

Imperfect though it is, the ARRL is the only voice the ham hobby has these days. It would be a very poor idea to do away with the ARRL without having something better to replace it.

The ARRL does need to refocus it's efforts toward attracting newer younger members to the hobby if it is to survive long term. The hobby won't survive if its quasi-regulator continues to do treat amateur radio as though it operates in the heyday that was the 1950's.

I can only speak for us here in Bama. On HF we provided communication
between the State Headquarter EOC (Emergency Operations Center) to all
other local EOC's in the State of Alabama.

We provided logistic support concerning deployment of personnel to affected
area's and kept accurate information on various storm shelters around the
state.

We also provided inter-agency communications at a local and county level,
as required by the local on the scene commander.

This is but a small sample.

Dan/W4NTI

really? have you even asked?
just for your info, I did here at the MCEOC. from what they told me, they
don't consider the "chicken band" to be of any use in a real emergency. too
many untrained idiots to have to manage was their words on the subject.

> both trained and capable to handle emergency communications for over
> 4000 people? Nope. I doubt there are -ANY- hams capable of handling
> that kind of traffic.

your math is flawed..... 1 ham for every 461 people would only occur IF (and
only if) the entire nation were attacked en-masse by either biologics or
nuclear means (and by then, the telco infrastructure would have long since
been disabled). Besides, I have done emergency comms work before and have
handled upwards of 200+ communications per hour (such comms include name,
address, type of info, its priority, etc). thats an avg of 3 communications
per second (and a human can handle this quite easily - case in point: air
traffic controllers). point is, the type of disaster that would take out
everything (your scenario) just doesn't have any real basis in reality
currently. now it might down the road, but your "just suppose" take on this
is just not relevant.

>
> And historically, what do hams -really- do during a disaster? Some
> establish comm nets that are rarely used, while others take advantage
> of the opportunity to make "disaster-zone QSLs". That's about it.

BULLSHIT.

recent fires in Arizona would prove you wrong. hams were passing a majority
of both the emergency and health/welfare traffic in and out of the fire
areas, as well as acting as coordinators for several emergency zones within
less than 100 miles of each other (it can be a real PITA to have someone
dispatching a plane to one area only to have someone else dispatch the same

plane elsewhere at the same time).

>

quantity is not quality. just because there are more, doesn't mean they are
any more useful. in fact, the average CB operator doesn't have even the
minimal training required to handle emergency communications where lives
might be at stake. couple that with all the idiot operators on the band who
would just as soon key over any traffic (hence "AUDIOOOOOO" or "HAMMER!")
as pay attention. I witness this time and again on local chan 19 down by
the truck stop (located some 5 miles south of me). you are lucky if you can
get a word in edgewise and god help you if you had a real emergency! I
could always record some of this "noise" save it as an mp3 and post it here
for all to hear as a typical morning on chan 19.

> role in disaster communication than ham radio, and will continue to do
> so in the future.

yes. radio does have that purpose (an infrastructure backup) and only when
trained people are at the mic does it work effectively. how many people
do you know of that have worked CB during an emergency situation that have
been taken seriously by any EOC? so far, I can't find any real reports of
any, other than those "numerous and conflicting reports" that never pan out
as factual. again, I require you cite me some factual sources that can be
verified.

>

>>you can do will get your call through any faster (and you'll just tie
>>things up that much harder for someone with a real emergency anyway).
>
>

> The point is moot; land lines are usually dead when the grid goes
> down.

WRONG. land lines have their own emergency backup power (the same cannot be said for most cellular towers which often die due to load and cheap backup supplies. the telco system (hard land lines) run on a 48 volt system that is backed up at multiple locationsusing batteroes (batteries that are 2 volts each setup in series and capable of delivering several thousands aperes each). these backup supplies are usually located in central offices which are distributed throughout the area and cross connected to offer redundant capability (lose one co, and you have 3 others to take up the slack). I may not be a telcom engineer, but I know a fair number of them personally, so asking this type of question wasn't hard.

>
>
>>just because you don't like hams, doesn't give you the right to trash the

> said for ham radio.

again, BULLSHIT. I have never heard any ham operator charge for his services. in fact, it is a violation of part 97 if he tries (and also several other regulations and a few laws).

>
>
>>besides, the last ham fest I was at (williams Az), there were a lot of

oh really? and what facts do you base this low opinion on? I think the only arrogant, elitist SOB here is you. you have offered no facts, you have argued on baseless points and yet you still cannot accept the fact that you are wrong. you are just arguing to be arguing.

>I can only speak for us here in Bama. On HF we provided communication
>between the State Headquarter EOC (Emergency Operations Center) to all
>other local EOC's in the State of Alabama.

Don't they use landlines used for the primary comm and keep wireless
in standby for backup? And don't they have sat-phones? PSP repeaters?

>We provided logistic support concerning deployment of personnel to affected
>area's and kept accurate information on various storm shelters around the
>state.

Paperwork.

>We also provided inter-agency communications at a local and county level,
>as required by the local on the scene commander.

Most states already have those systems in place using the PSP. Your's
doesn't?

>This is but a small sample.

I don't see any "major role" or "life-saving" operations. I -do- see
an emergency communications system that's barely evolved from the days
of Marconi. Did you monitor any CB chatter? Hear any distress calls on
channel 9? I'm sure there were a few. Do you have a REACT group in
your area?

Another Stevie lie

I said anyone that WANTS my repsect NEED to earn it, and by MY
standards

and that isn't flattery that is a fact

it even aplies equaly to you

Stevie the mental health field does not consider Homosexaul or bisexaul
behavoir to be mentaly ill

Lying is not an illness either, it is a choice, sadly the actions of
folks like you, and worse than you have convinced me that lieing about
myself on line is sadly the only safe way to live and be online

and none of this has anything to do why I left Illinois mst folks do
move every few years you seem to have have few moves since I have been
gone.

and why should I explain why I choose to move to the likes of you

>

> > murder being ok
>
> Sure you did...

No I did not. I am able to look at them see the man and the Monster
(another Lost in space quote, I admire the Doc Smith character in many
way, while being appaled by him to)

>
> You said "...well Gacy seem to have met his needs for years..."
>
> His "needs" were to murder young men.

yes I said that never said that they were right or not. You assumed you
can't infer one from the other

>
> Your post suggests you find that OK.

only to you as far as I know

to anyone else I do apologise for any misunderstanding

>
> Are you willing to clarly state that murder and anyone who murders
> is abhorrent?

not at all

Murder is sometimes the only thing to do, for example if you decide to
show up at my QTH one of us will die. I will rsik the charge of murder

If the law breaks down such as in a roit I may ahve no real choice but
to murder those that seem to threaten me.

To stalk and kill some that rpes you or a loved one byt escaped the
ends of justice is not abhorant to me, Illgel yes

Not saying any of this aplies to Gacy. some might aplly though to
McViegh.

Indeed on the Subject of McViegh let me make myself clear In My Opinion
if McViegh had claimed that he was comtting an act of war against the
USA, he should have been held as a POW until and unless the USA
Military decided to porale him. This detention would require no trial,
and he essentaily could be kept as we keep folks in gitmo today.

>

> I only assume that you understand that if you're going to keep
> trying to make an issue of what your "rights" are, I am going to use
> those SAME rights.

You are not being endangered Steve. I am. You have NO right to take action that Endanger Me Todd or BB such as you do when you post satements claiming we are gay tue or not that is dangerous in the USA today

I know you will continue to assert your alleged right to endanger anyone you choose

To threaten their lives and safety

and sadly prove we don't live in a decent Society

>
> If you don't like them, all I can say is YOU have a problem.

Indeed I have one, as does Society

>
> > Therefore from my point of view I am a person (decent or not) in an
> > indecent society, and I make my choices accordingly.
>
> Society is "indecent" only where decent people allow it to be that

and you are amoug that allow (if you are in fact a decent person which
I doubt)

> way (Or where indecent people choose to try and make it that way...).
> Unfortunately it sometimes takes a slap in the face, directly or
> otherwise, to get people to defend that society or lose it.

then defend it stop endanering others stop objecting to other taking
measures designed to improve their safety and still exercise their
rights
>
> Weak gene pool individuals such as yourself contribute to that
> indcent society.

NAZI as soon as you start on genes you show your true colors hate
monger

>
> > I am lied too
> > everyday (unless I don't get out of bed and I don't turn on the TV)...(SNIP)

> that's not a volunteer.

Bullshit

then why is the Stop loss order needed

plenty of them have served thier time and would leave if they could

I can name one them them LT (wether jg or not i don't know) Hojnacki
USN

In addtion the British army includes consprits even by your language

>
> They may not LIKE being there, however not a single one of them
> was compelled to join the Armed Forces.

to reamin after there tour of duty

the moment that ended and they had to stay they BECAME draftees as I
use the term

>

> before they are each age of majority.

but you implied you would that becomes a threat

just like it is crime to threaten a president even if you don't mean
it.

that fact clearly implies you CAN threaten thing even if you don't mean
to follow up

>
> However they are going to get an eyeful of thier father's

> Burke", N0IMD, etc.

They will get a confusing mass of claims counter claims and name
calling I'd not change how I felt abotu my dad on the basis of any
such drivel

>
> > > They'll see the man they loved in a different light...An
> > > unfortunate one, at that...
> >
> > repating your theats
>
> "repating" what "theats"...???

your implied threats

2 phone call to knock on my door

One Shot one kill...

you implied threat to contact them

your threat to paint a blue L on my and brains head

>
> Your "partner" have enough of typing your RRAP positngs
> today...?!?!

my partner has never typed one of my posts

if she did they'd be her posts

>

As a matter of fact I have. Haven't you ever heard of REACT?

>just for your info, I did here at the MCEOC. from what they told me, they
>don't consider the "chicken band" to be of any use in a real emergency. too
>many untrained idiots to have to manage was their words on the subject.

I guess it depends on your perspective. When the shit hits the fan,
the power and phones go down, and the only line of communication is
some redneck CBer driving around looking to help people in trouble, do
you think it's a good idea to wave him off and bleed to death while
waiting for a ham?

>>>you haven't been listening much on 11 meters of late, have you. its still

>regarding cb operators at all. care to site a source that I can verify?

That was an analogy, Eric. People are people. Some of us may behave
poorly and irresponsibly when things are hunky-dory, but a disaster
usually brings out the best from even the worst of us. 9/11 proved
that on many levels, as did just about every major earthquake,
hurricane, or other disaster that has struck since civilization began.

>>>by contrast, the amateur radio community has some well trained people
>>>(that training is provided at classes offered by officials of those very
>>>same EOC offices). if you call in an emergency on the ham bands, you are
>>>certain to get some useful help, even if it comes in the form of an old

It's a perfectly valid distribution sample. If a disaster zone affects
620,000 people, there will be about 1345 hams in that population
(assuming hams are evenly distributed throughout the population).

> Besides, I have done emergency comms work before and have

Three "communications" per second? Hmmm.... I guess that depends on
how you define a "communication".

> point is, the type of disaster that would take out
>everything (your scenario)

No, that's -your- scenario.

>less than 100 miles of each other (it can be a real PITA to have someone
>dispatching a plane to one area only to have someone else dispatch the same
>plane elsewhere at the same time).

Maybe you missed the point: I'm not saying hams are useless. If an
agency has the time and means to mobilize some hams to man some air
conditioned communication op-centers, great, I'm sure that happens
quite often. But you don't see too many of them in the trenches, which
is where the wars are fought. That's where you'll find the CBers
picking up the slack when the phone system doesn't work, when the PSP
is overloaded, and when pre-planned logistics aren't flexible enough
to accommodate unforseen circumstances. Happens all the time.

>> In contrast: There are -way- more CB radios than ham radios; Most CB
>> radios are mobile; Many CBers have more than one radio, and extra
>> radios can be quickly installed in a vehicle; CB radio is a popular

>> or not, CBers can and do organize quickly and behave appropriately
>> during an emergency, a fact which has been proven many, many times.
>
>quantity is not quality.

No, but it -is- quantity. You can have the best trained ham manning a
radio in the center of a disaster zone, but you =MUST= have mobile
comm within that zone. There simply aren't enough hams in any given
area to do that job. And CB radio is almost -ideal- for the task.
Wherever you are, there are lots of CBers already there, ready and
willing.

> just because there are more, doesn't mean they are
>any more useful.

It most certainly makes a difference when there is a need for a lot of
lines of communication. And CB radios allow neighborhoods and small
communities to take care of many problems by themselves, relieving the
burden on the emergency services and their communication networks.

> in fact, the average CB operator doesn't have even the
>minimal training required to handle emergency communications where lives
>might be at stake.

Hogwash. Almost every CBer knows that Channel 9 is for emergencies,
and most CBers already know how to communicate with their radio. The
only "training" needed is the ability to organize communications, but
that's why there's REACT. Even without REACT, it doesn't take any
intensive training to learn how to cooperate with others during an
emergency -- it happens whether people are trained for it or not.

> couple that with all the idiot operators on the band who
>would just as soon key over any traffic (hence "AUDIOOOOOO" or "HAMMER!")
>as pay attention.

Yeah, that happens all the time in disaster situations, especially on
channel 9......

> I witness this time and again on local chan 19 down by
>the truck stop (located some 5 miles south of me). you are lucky if you can
>get a word in edgewise and god help you if you had a real emergency!

Pay attention, Eric: Channel 9 is used for emergencies, not 19.

> I
>could always record some of this "noise" save it as an mp3 and post it here
>for all to hear as a typical morning on chan 19.

You go right ahead and record all this stuff while listening to
channel 9. Post it, as well as the time and location it was recorded.

>> But ham radio -does- have a place in emergency communications -- as a
>> communications infrastructure backup for extreme situations such as a
>> nuclear holocaust, a large asteroid impact, a super-volanic eruption,

You "require me"? Get a life, Eric. Then get a CB radio and talk a
while with some of the folks on the band. You'll get your sources
there.

>>>also, contrary to what you might believe, most of the phone systems aren't

>personally, so asking this type of question wasn't hard.

You don't get it -- if the grid is down then it's down for a reason.
If it's not a transmission or generator plant failure, the reason is
usually because a number power lines are down. If the power lines are
down then the phone lines will probably also be down, and it doesn't
matter if the relay stations have backup power or not -- the phones
won't work. And BTW, most cell-phone towers have battery backups just
like telcom relay stations.

>>>just because you don't like hams, doesn't give you the right to trash the

>services. in fact, it is a violation of part 97 if he tries (and also
>several other regulations and a few laws).

It most certainly is against the law. Remember the Jim Jones suicide
cult? Maybe you should look at their radio activities with US hams
before they drank the kool-aid. I mention this as only one instance
because the magazine with the article was sitting on the top of the
pile on my desk. There have been many other instances.

>>>besides, the last ham fest I was at (williams Az), there were a lot of

I see that life saviing operations is in quotes. where did Dan write
that? He told ya what they did. EOC's appreciate it, even if you don't.

> I -do- see
> an emergency communications system that's barely evolved from the days

Umm, that is what the comms are all about. The highly evolved stuf
tends to go away when disaster hits.

Did you monitor any CB chatter? Hear any distress calls on
> channel 9? I'm sure there were a few. Do you have a REACT group in
> your area?
>

Tell us about REACT........

As far as I can see, a lot of them *are* Hams, and they provide
services in the same way. If'n you don't like the Hams, ya don't like
REACT either.

Having been promoted through all the Navy enlisted grades through E9, I understand how the promotion system works, and there is no magic "Definitely Promote" tag which will get a lesser qualified person promoted over better qualified candidates.

No, sorry, it isn't. If it was, the same distribution would hold
regarding professional EOC communicators, or REACT members, or whoever.

Just as a point of interest, you write of some apparent necessity for
stations to be mobile. How many mobile stations are going to be in use
during a major hurricane? Are we supposed to head out in our pickups,
tuned to channel 9, and cruise up and down the beach as the storm surge
comes in?

That might be the job of the police and other highly trained emergency
workers, but not us.

What do you see emergency comms as anyhow?

Have any news releases?

>>>In contrast: There are -way- more CB radios than ham radios; Most CB
>>>radios are mobile; Many CBers have more than one radio, and extra
>>>radios can be quickly installed in a vehicle; CB radio is a popular
>>>mode of communication with 4-wheelers, and 4x4's come in mighty handy
>>>in many types of emergencies; Most CB antennas are easy to spot even
>>>by non-CBers; CB radios are readily available to emergency services;
>>>CB radios are insanely easy to operate; etc, etc, etc. And believe it
>>>or not, CBers can and do organize quickly and behave appropriately
>>>during an emergency, a fact which has been proven many, many times.
>>
>>quantity is not quality.
>
>
>
> No, but it -is- quantity. You can have the best trained ham manning a
> radio in the center of a disaster zone, but you =MUST= have mobile
> comm within that zone. There simply aren't enough hams in any given
> area to do that job. And CB radio is almost -ideal- for the task.
> Wherever you are, there are lots of CBers already there, ready and
> willing.

SO these CB'ers are manning emergency comms right in the middle of the
disaster area? Seems we would hear more about it.

>

Yeah, that is a little hard to believe. I'd like to see some
explanation of that.

I went to the REACT site. Lots of stuff on training, and going to conventions. Nothing much on actual operations. I note that they do use Ham gear, so I suspect some of the members are Hams

And locally, I hear truck drivers, a few locals and skip occasionally. None of which appear to have much to do with emergency comms.

Damn, and here I thought that the 20M band was at about half the frequency of the 10M band. Did those rascals at ARRL go and change that too? Where on the dial can I now find my 20M buddies, up in the old 5M band? I thought we'd lost that band way back in the 40's.

dit dit
